One of the First Jobs of the New Year

How Much Are You Really Worth?—By V. B. Hart

What Is Cow Manure Worth?

An Unimportant Quarrel and More Important Crop Experiences

Question: Would you give me an idea what a truck load (or cubic yard rather) of well rotted cow manure would be worth at the barnyard? What should I get?—H. A. Q., New York.

We referred this question to Mr. A. F. Gustafson, Professor of Soil Technology of the New York State College of Agriculture, and he answered it as follows:

WE have your letter of recent date regarding the value of a cubic yard of well rotted cow manure. In a four-year rotation of corn, oats, wheat and clover, manure applied at the rate of eight tons to the acre at the Missouri Experiment Station gave crop increases worth \$1.62 for each ton of manure. The Ohio Station secured similar results from a light application of manure. Here at Cornell in a rotation of corn, oats, wheat with timothy three years, 10 tons of manure to the acre applied on the first and third timothy crops, 20 tons in six years, gave increases in yield worth \$2.50 for each ton of manure. In this case no clover was grown on the check plots so the returns from manure may be regarded as somewhat higher than could be expected on the average farm.

I have used what may appear to be a low price for crops but we believe it to be the ap-

ANOTHER OLD TIMER

Here is a picture of another old horse. Billy Cronk of Ossining is the boy in the picture, with his great grandfather's horse Nellie, born April 5, 1890. She has always lived on the same farm and been in the same family 34 years, as was her grandmother and her mother. Old Nellie, the past summer has helped do all kinds of farm labor. Nellie has a daughter named Nellie, 12 years old, born April 25, 1912, in the same barn and in the same family.—E. F. Young, New York.

proximate value of the crop unharvested in the field. This is where the manure produced the increase. Each unit of increase must bear its own share of harvesting and marketing expense.

The following figures were used: corn 50c, oats 30c, wheat 70c, and hay \$6 a ton. A cubic yard of the manure in question will weigh approximately 1300 to 1400 pounds. Based on the above data, \$1.60 for manure at Missouri and \$2.50 here, a cubic yard is worth from \$1 to \$1.50. Under average farm conditions \$1.00 a cubic yard is probably a fair price, which means about \$1.50 a ton.

You will appreciate that other conditions, such as quality of seed used, the condition of the land—whether it is the manure supplemented with the phosphorus or not—the care and cultivation given the crop, together with many other factors, will influence the returns which may be expected from manure in common with other soil treatment. These conditions are usually more nearly ideal on experimental plots than on the average farm. Consequently, we seldom hope to secure as good returns under farm conditions as under experimental conditions.

An Old, Old Controversy

YOU were certainly right in thinking other breed fanciers would get "het up" reading Mr. C. F. Bigler's article on the Holstein cow.

First he says he owns a herd himself and can milk by hand. Then he asks the question, do I know cows? Instead of answering he gets by, by slurring every other breed. It would seem unnecessary for him to throw mud at all of them when he claims the breed he fancies holds all the records obtainable and the receipt for raising babies and keeping the earth inhabited.

Referring to Jersey and Guernsey calves he says they have to be watched for months lest the cats catch them. Let me remind him that good things often are done up in small packages and this is very true in this case.

Other breed fanciers cheerfully admit that the Holstein produces more milk than the other breeds but when you consider profit above feed cost she does not head the list. The result of the Ohio University test was for every one thousand pounds of feed consumed, the Jersey produced 65 pounds of butter while Holstein produced 47 pounds.

Figures showing the production alone of an individual or breed are misleading and mean nothing to the average farmer until the cost of that production is considered. It is the net balance after all feed bills are paid that jingles in his jeans. In this respect the Jersey is supreme and in the final analysis this is the condition on which all breeds must compete.

I have not tried all other breeds like Mr. Bigler, but will say I started with Holsteins and found they were not adapted to my farm which is sandy loam. I changed to Registered Jerseys and can truthfully say and prove by cow testing records that they are better and pay me more profit than any cows I have ever owned.

If Mr. Bigler is content to be married to the Holsteins, I am certainly not going to try to alienate his affections from them, but I am mighty glad I got a divorce from them myself.—H. N. ROBB, Essex County, New York.

EDITOR'S NOTE—We publish the above letter because we believe in being fair by giving all sides. But as a matter of fact there is not much point in the everlasting debate about best breeds. The best breed depend upon the man and the farm.

* * *

Desirable Oat Varieties

"Will you name some good varieties of oats for planting in this section."—E. R. P., New York.

THE Department of Plant Breeding at the State College of Agriculture at Ithaca has been testing oats for many years, and they have found that without question the six best varieties are: Cornellian, Empire, Standwell, Comewell, Victory and Selection 343.

This Department particularly warns farmers against the so-called "horse mane" or side oats. They look well, but they are usually very poorly filled. Neither do they stool out much at the base, so that they do not fill up the space where the seeding is thin. The heads are easily broken off, too.

* * *

Do You Get An Ear to the Hill

THE vital importance of selecting seed corn early and storing it in a dry, well-ventilated place has been emphasized so persistently in the past few years by our agricultural colleges and county agents that it would seem entirely unnecessary to mention the matter again. But there are still farmers who do not select their seed corn at the proper time and who are not careful to see that the seed corn is well dried out before frost can injure it.

Last spring County Agent McDonald of Audubon county, Iowa, tested over one hundred samples of corn for the farmers of his county and found that a large percentage of the kernels were dead, moldy or weak. Tests in Guthrie, Cass and other counties in the state brought out the same results.

Here is a graphic illustration that shows

what good seed corn of strong germinating quality will produce from an acre of ground. There are 43,560 square feet in an acre. If the rows of corn are planted two and a half feet apart there will be 6,970 hills. If each hill produces only one good-sized, solid ear of corn the yield will be nearly seventy bushels. If these figures seem too high, cut down the estimate ten per cent and you still have a yield of sixty-three bushels. There isn't a state in the corn belt that can show an average yield that high.

It is true that soil and weather conditions are factors that enter into the yield of corn, but by far the most important factor is the seed you plant. Is one good-sized, solid ear of corn too much to expect from six and a quarter square feet of high-priced corn belt land?

* * *

A Filter for Cistern Water

HERE is something that is interesting. About the greatest trouble with a cistern is the job of cleaning it out. About the only way to get around that job is to keep dirty water from getting in. It is said that this contrivance will go a long ways to reducing the amount of dirt that gets into the cistern and therefore reduces cleanings. The device speaks for itself. The two bar-

rels with false, per-set side by side on a waterspout coming are connected with a cistern. Above the barrels are layers of sand, coarse gravel at the bottom and fine sand at the top. A layer of coarse charcoal might be added to run through the sand also. A float rests upon the top of the sand. As the water comes from the roof, it strikes the float. To prevent the water from the spout washing a hole in the sand, the incoming stream strikes the little one-inch strip that is on the float. This spreads the flow. In fact, a little layer of gravel at the surface would help to prevent too severe washing of the sand on the surface.

As the float rises in the one barrel, it gradually tips the spout so that the water flows into the other barrel. The water should filter away fast enough to avoid any overflowing. The delivery pipe from the barrel to the cistern should be large enough to take off the flow easily.

When the sand becomes dirty it doesn't take long to put in a new batch. It will tend to keep the water in the cistern clean and will greatly reduce the number of times the cistern must be cleaned.

* * *

If things ever break it is just when you are busiest. Next time you are in town lay in a supply of hooks, screws, bolts and so forth for the haying and harvesting tools. You won't be sorry.

How Much Are You Really Worth?

This Article Shows How You Can Take a Farm Inventory in Half a Day

By V. B. HART

AT THIS SEASON of the year we are in a place on the road of old Father Time where we can look both ways. As the old man with his scythe and hour glass goes out of sight over the hill and the young fellow in the rabbit skin comes trudging down the trail, we can look back over our businesses for the past twelve months and lay plans to stop the old leaks and make the new year more successful than the last.

The past year has not been a prosperous one for farmers. Prices of farm products have been low and feed, fertilizer, and labor have been very high. The war time motto of "Food will win the war" has disappeared and the farmer has his eyes on a new one that reads "Economical Production."

The first step to take in planning for a more economically operated farm business for 1925 is to take a farm inventory.

What Is A Farm Inventory?

A farm inventory is a complete list of all the resources and liabilities of a farm at a given time, together with the value of each item. A farm inventory is the simplest form of farm financial record and for the time required to take it shows the farmer the most about his business of any form of accounting that he can do. The entire inventory on the average farm can be taken by the farmer himself in less than half a day. All that is necessary is paper and pencil and the desire. Most of our state colleges are prepared to furnish farmers with a bulletin containing simple directions for taking a farm inventory and also space for recording it.

Value Of A Farm Inventory

An annual farm inventory will do five valuable things for you. It will:

1. Show your net worth above all debts.
2. Show whether or not you are getting ahead financially, and how much.
3. Make a good basis for preparing a credit statement.
4. Help put your farm on a business basis.
5. Provide a valuable list of all property for use in case of fire, in settling estates, or for other purposes.

An annual farm inventory will show your net worth above all debts and put your farm on a business basis. Men are apt to judge their financial condition by the amount of money they have in hand, or on account at a bank. Many farmers feel at the end of the season that because they have less cash in the pocket than at the beginning of the year that they have run behind in the year's business. An inventory may show that because of the purchase of stock or machinery they are really worth more than at the beginning of the year. In a similar way because a farmer has sold off some of his stock and has more ready cash on hand he may feel that he has gained during the year when in reality he is worth less than he was a year ago.

One inventory tells us our net worth at some particular time. If this inventory is taken again at the end of the year we once more know our net worth, and by comparing it with our net worth of a year ago, can tell how much we have gained or lost during the year. Probably one of the most important reasons for a farmer taking an annual inventory is that it makes a basis for preparing a credit statement. A farm credit statement is simply a summary of a farmer's inventory with some additional information, such as the size of his farm, tax assessment, insurance on buildings, etc.

There is no type of farming that does not use

an inventory of his farm business and make out a credit statement.

A farm inventory provides a valuable list of property for use in case of fire or to be used in settling an estate. A farmer hopes that he will not be burned out but farm buildings do sometimes burn and in case of fire a complete inventory of property lost is of considerable value in settling an insurance claim. The writer knows of an instance where a farmer's inventory showed that he had lost stock, tools, and produce inventoried at \$2400. The owner said that before figuring up the loss from his inventory he would have been perfectly willing to have settled his claim for \$1500. The insurance company drew him a check for \$2400. His inventory had saved him nearly a thousand dollars.

When To Take A Farm Inventory

For most general farms, the best time to take an inventory is between January 1 and March 1. For strictly poultry farms, the best time is about November 1. Convenience is the most important consideration. If the inventory is to be used for computing income tax, the best time to take it is January 1. The inventory should be taken at the same time each year.

How To Take A Farm Inventory

The average farm inventory can be taken in less than half a day. No special knowledge of bookkeeping is necessary. The requirements are three, viz.: paper, pencil, and the desire. The inventory is simply a list of the farm property with values attached and a list of the farm mortgages and other debts. The inventory should include the real estate, horses, cattle, sheep, hogs, poultry, farm tools, hay, straw, grain, silage and other farm feed and supplies. In fixing values on the various items of farm property use your best estimate of what the animal or article would sell for if you had a reasonable length of time in which to dispose of it. This will usually be about the price one would have to pay to buy something just as good at a well attended farm auction.

In inventorying cattle, if one owns all pure bred cattle it is best to inventory each animal separately, recording the names and number. With a grade herd, if desired, the cows and heifers can be bunched at so much per head.

In inventorying farm machinery there is no set rate of depreciation to be charged off for each year. The best rule is to use your own judgment as to what the piece of machinery would bring at a well attended farm auction.

In inventorying hay about 500 cubic feet of well settled timothy hay can be figured to equal a ton. The deeper the mow or stack the heavier, of course, the hay would weigh out. In inventorying grain in bins figure one and one-fourth cubic feet per bushel. A convenient method is to compute the bushels of grain that bins will hold for each foot of depth and mark with a heavy lead pencil the number of bushels on the

(Continued on Page 13)

Example of a Completed Farm Inventory

Farm Inventory—Jan. 15, 1925

	Value 1925	Value 1926
RESOURCES		
Farm, 165 acres	\$9000	
Horses, 3 teams	810	
Cattle, 15 head purebred; 21 grades	2760	
Hogs, 3	45	
Poultry, 150	200	
Feed and Crops	1120	
Miscellaneous Supplies	125	
Equipment	1650	
Fall Plowing and Winter Grain	110	
Accounts Receivable	200	
Cash and Other Property	75	
TOTAL		\$16095
LIABILITIES		
Mortgages and Accounts Payable		5625
NET WORTH		\$10470
GAIN OR LOSS FOR YEAR		

A summary of this kind shows a person the difference between what he owns and what he owes or his net worth. There is just one thing better than an inventory to show a man where he stands and that is another inventory taken a year later. Two inventories show the net worth of the farm business at the beginning and end of the year and their difference shows the gain or loss for the year.

credit in some form. Crop farming means buying seed and fertilizer in the spring and selling the crops in the fall or winter. Dairy farming gives more or less of a regular income throughout the year but dairymen use considerable credit to finance their farm business.

Feed dealers and fertilizer agents are not in as good a position to extend credit as are banks and for this reason credit obtained from merchants costs farmers much more than the usual rate charged for bank credit. Any farmer who buys feed, fertilizer, machinery and other farm supplies on credit could usually save money if he could borrow from a bank and take the usual discounts given for cash. Banks cannot advertise to furnish unlimited credit to farmers but there are many farmers who are in sound enough financial condition so that banks would be glad to loan them money for productive purposes if they put their farms on a good business basis and asked for credit in a business-like way. The best way for a farmer to find out for himself and for his bank whether he should have credit is to take

Inventorying Is Interesting

DID you ever take an inventory? It sounds like a big job, but it is not. It is really one of the most interesting things we ever did in connection with the farm business. How few of us there are that really know just how we stand with our business! The inventory gives this information.

The first few days of January are the best days in the year to size up your business by an inventory. The feature article this time tells how it can be done in less than half a day.

Fluid Milk Consumption Increasing

ONE of the hopeful signs in the milk market situation is the constantly increasing sales of fluid milk in this territory. Over sixty per cent. of the milk received in New York State at milk plants is now sold as milk or cream. This statement is contained in a bulletin entitled "Statistics Relative to the Dairy Industry in New York State," just issued by the Department of Farms and Markets.

This report shows that New York is now the leading state in the Union in dairying. The total production of milk in the state in 1923 was 7,124,300,000 pounds. This was produced by 1,394,000 cows. Both the production and the number of cows in 1923 are lower than for 1922. This is a hopeful sign especially as the cows which were disposed of were for the most part poor producers, or those which have been condemned for TB.

Amend the Automobile Law

THE new law in New York State preventing boys and girls under eighteen from driving cars in making a lot of trouble for rural people. We are receiving many letters every day objecting to this injustice.

The New York Review, in commenting on this phase of the law, says:

"A hard and fast rule of unconditional exclusion from motor vehicle operation of all persons under eighteen years of age is harsh and unnecessary and is based upon a fact of not sufficiently close relation to the characteristics of mental alertness, poise, judgment, discretion and physical strength. Surely it cannot be affirmed that all persons under eighteen years of age are, by reason of youth and immaturity, rendered unfit to operate an automobile. The ideal system would not consider age at all but only the qualities of mind and body which in combination do or do not constitute

fitness for the purpose considered. Many men and women of fifty, even after years of experience, are less skillful in the operation of automobiles and exercise poorer judgement in emergencies and are far more ignorant mechanically than many boys and girls of sixteen.

"But if the legislature must have an arbitrary age requirement, eighteen years is too high; and to enforce such a law in the rural portions of New York State would cause extreme hardship and inconvenience. No state of which we know at the moment fixes the age requirement at as much as eighteen years and we are told that in several states there is a provision for so-called junior licenses, after a special examination, for persons below the general age requirement. Such a provision should surely be incorporated in the New York law, allowing junior licenses in country communities for specially qualified operators, say of the age of sixteen years or over, after a special examination to ascertain the fact."

We are heartily in accord with this suggestion for a junior license; and we will work for the passage of such amendment in the coming session of the legislature. May we suggest that if you are interested, bring the matter to the attention of your own assemblyman and senator.

Farm Children Not Inferior

A SURVEY or an investigation involving 20,000 high school pupils, representing every state in the Union, showed that farm children make better progress than other children through high school. This was particularly true of farm girls. For some reason or other, the boys did not make such a good showing, possibly because they stay out more to help with the farm work.

The United States Bureau of Education, commenting on this fact, says:

"We must abandon the myth that the farm stock is decaying and that all of the brains have migrated to the cities. The farm stock is still virile and intelligent. It is yet educable. We need not fear to offer to country children an unbiased liberal education, and permit, even encourage, those so minded and fitted to seek opportunity wherever it beckons, whether it be upon the farm or in the professions or trades."

The reason why country children forge ahead so rapidly in high school and in life itself is the farm homes from which they come. In these homes farm children are taught through chores and other labors of the farm habits of responsibility and respect for the simple homely duties that make up the work of the farm and the home. Farm children like to play as well as other children and they have opportunity to play. But they know that the work and the chores must come first. The ball game or the party are all right; but first the milking must be done, the calves fed and the eggs gathered. So they come to realize early in life the value of work, the need of application, and the self control to put business before pleasure.

The Time To Be Sorry

OUR mail every day brings requests to our Service Bureau to help somebody avoid carrying out his part of an undesirable contract. When these requests clearly show that our people sign these contracts under fraud or misrepresentation, we do everything we can to help our folks get out from under them. Also, when it is shown that disaster of one kind or another has made it impossible without great hardship for a signer of a contract to meet his obligations, we will take the matter up with the other party in an effort to get an adjustment.

But in the ordinary course of business, a contract signed in good faith by both parties is an honorable agreement to carry out an obligation and as such it should be met to the letter by both parties. One of the finest things that can be said about a person is, "his word is as good as his bond," and the thousands of men and women of whom this can be truly said will leave no stone unturned to meet every obligation, legal, literal and moral. No better rule can be laid down to avoid a lot of trouble in carrying out a hard contract or agreement than to be absolutely sure you

want a thing before you allow someone to fool you into signing up for it.

We have a letter before us on our desk now where a person was sorry that she had signed a contract to buy a set of books two minutes after the salesman had left the house. Yet she had signed a legally binding contract agreeing to purchase the books. The books were all right, too, and the company which published them responsible. The time to be sorry is ten minutes before a contract is executed, not ten minutes after.

Cash Checks Promptly

WE are very much pleased with the way our people are using our Service Bureau. Letters are pouring in every day and all of them have very prompt and careful attention, except the few which we receive that are unsigned. All names will of course be held confidential, but we cannot give any attention to unsigned communications.

May we make the suggestion also in passing that it is dangerous business to hold a check for any length of time without getting it cashed. Very frequently, we have complaints brought to when presented to the bank for payment. In some cases, there was evidently money in the bank our attention of checks that have been protested when the check was made, but not after the farmer had held it for several weeks or even months.

Eastman's Chestnuts

TUCKED away in the old County of Warren in the historic Lake George country of Eastern New York, there lives a class of farm people who have my very great respect. For generations these men and women have wrested a living from the barren mountains of the Adirondacks, maintaining a high standard of life and in spite of the struggle, have obtained some happiness for themselves and rendered their full share of service to their fellows, their country and their God.

Some few years ago these Warren County farmers hired to assist them in their struggle for better farming and better living a county farm bureau agent who signs himself K. D. Scott, but who is better known to his friends as "Scotty." Now this chap is "some" county agent. He knows the farm business from the practical farmer's standpoint, and best of all he knows the hearts of his people and what to do to bring a little more happiness to them.

It is claimed on good authority that Scotty also knows Ford cars. Those who are foolish enough to ride with him claim that he drives the mountain roads at sixty or a hundred miles an hour with long knees and one hand up around the wheel and with the other hand calling the attention of his paralyzed passenger to the beautiful scenery or a farm bureau demonstration plot along the road.

One story has it that Scotty was seen one day leaping from crag to crag with his Ford in pursuit of a mountain goat. It seems that he had read in AMERICAN AGRICULTURIST that goats were good milkers and did not have TB, and he therefore went out to get one for a farmer who had just lost most of cows from that dread disease. This may be an exaggeration.

Anyway, Scotty knows how to drive Ford cars. He does not need much gas either. One day a big Pierce Arrow drove up in front of him at a gasoline station and ordered twenty gallons of gas with which to negotiate the next five miles of mountain roads.

After the driver of the big car had obtained his twenty gallons, Scotty drove up and said to the garage man:

"A pint."

"Gosh," exclaimed the amazed gasoline man, "what're you tryin' to do—wean it?"

"The language of friendship is not words, but meanings. It is an intelligence above language."
—THOREAU.

Canning Crop Growers Pay the Fiddler

Failure Should Lead to Building Again on a Better Foundation

THE New York Canning Crops Cooperative Association, Inc., is about to close its affairs and liquidate its obligations. This cooperative association came into being in December 1921, as an outgrowth of a loosely organized federation. It attempted to do a large business without an adequate business organization or system, lost money for its members by attempting to engage in manufacturing without adequate experience or capital, organized superficially, lacked the necessary supervision by a board of directors that felt and accepted its responsibilities and finally failed to practice a "pay as you go" policy. Disaster was inevitable. Naturally the fiddler has to be paid. Members are

M. C. BURRITT

now paying him with fifty dollar assessments.

At a meeting held in Rochester on December 15, 1924 acting manager Leo S. Allen, reported on the affairs of the association. He showed a total deficit of \$42,897.22 of which \$13,235.78 has been paid, leaving \$29,661.44 yet to be paid. To apply on this debt the association has good current assets of \$8,894.13 and collectible assessments on nearly 1000 members. Some money is still owed growers on 1923 products which went off condition and on which heavy losses were incurred. If all assessments are collected the association will be able to liquidate all obligations.

In this critical period in the life of the present cooperative movement, it is particularly important that members of the Canning Crops Association and American Agriculturist readers understand the reasons for the dissolution of this cooperative and profit by it in their attitude toward and conduct of other cooperatives. Some of these experiences are perhaps necessary. Cooperatives like individuals (of which they are but collections) can frequently learn needed lessons only in the expensive but effective school of experience. It isn't so bad to make a mistake once. What is unpardonable is to fail to learn the lesson and then make the same mistake a second time. As I view it, this stage of this cooperative does not necessarily mean failure of the marketing of canning crops by this method. On the other hand it may mean real and substantial progress if we learn necessary lessons and profit by them. The notable failure of Lewis Sands of Albion, "Bean King," does not vitiate the business principle of a corporation. Neither does failure to operate successfully a cooperative marketing organization prove the cooperative principle unsound.

How It Came About

The cooperative selling of New York grown canning crops began with local and county associations, the movement being especially well developed in Niagara and Orleans Counties. Following several preliminary local meetings, an organization conference to bring these groups together into a State-wide federation was called at Rochester by C. R. White in January 1920. The organization there set up elected J. A. McCollum of Newfane, president;

By M. C. BURRITT

Milford L. Hakes of Albion, vice-president, and Frank E. Rupert of Seneca Castle, secretary. At this time there were some 43 locals and county associations in Western New York, not all of which, however, were affiliated with the new State federation. They had a total membership of around 3000 growers and were doing a gross business of upwards of \$1,000,000. The county associations affiliated with the State federation, included Niagara (which alone had a membership of about 700) Livingston, Genesee, Orleans, Wayne, Monroe, Onondago, Wyoming and Steuben. Later on the Madison County market pea growers and a few others counties came in.

This federation was essentially a sound bargaining organization. The first year it was organized, it influenced the canners to increase

five year contract drawn by Aaron Sapiro. Under this "plan for strengthening" adopted in January 1922, the new association elected C. A. Rogers of Bergen, president; B. E. Brophel of Leicester, vice-president, Thomas E. Wright of Webster, secretary-manager and George W. Wayne of Bergen, treasurer. Nine directors were responsible for the association's business. Practically neither the directors nor executive committee held enough meetings to thoroughly understand the business and know what was going on, but left this almost wholly to the manager during 1922 and 1923. Except for the meeting just held only one general mass meeting of members has been held since organization in 1922—the annual meeting of January 1923.

Drifting Policies

The policies of the new association so far as it could be said to have definite ones, seemed to

be to organize all the canning crops growers of the State, affiliate them with similar groups in other states and deal with the canners collectively attempting to secure better prices through collective bargaining. But they did not stop here, either through carelessness or mistaken intent, and also planned to undertake the processing and preserving of fruits and vegetables themselves, contrary to the original plan. No clear distinction was made between a bargaining and a manufacturing and merchandising concern. Nor was any limit placed upon the kind of produce handled. All this business was handled from one central office in Rochester. Except for membership getting purposes, practically no local machinery was set up. How it was all handled without a worse mix-up and greater losses, was and remains a mystery to many. On top of this, money was invested in cherry pitters and a canning plant without sufficient capital or experience to see it through successfully.

Were these matters ever adequately considered by the directors or at all? Did the officers know all that was going on at the time? Did they sufficiently exert themselves to find out and check up the business of men for whom they were the trustees? Did the members make any effort to inform themselves about their own business, or feel any responsibility until they began to receive

small returns and have assessments levied upon them? These are all pertinent questions the answers to which furnish the key to the closing up of this cooperative's affairs.

In the spring of 1924 the directors brought to a sense of their own personal responsibility for the association's heavy borrowing and inability to pay, and by pressure from outside public sources, began to take greater interest in their affairs and to try to determine where they were drifting. This inquiry resulted in a request for the resignation of the secretary-manager, in an assessment of fifty dollars per member to pay off accumulated debts and losses and finally in the present process of complete liquidation.

These are the facts very briefly stated. They are worth consideration not as an academic post-mortem but for the purpose of determining causes and avoiding similar mistakes in

(Continued on Page 17).

What "Letting George Do It" Did.

THE article on this page is the best thing that has ever been written on cooperation. Disaster overtook the Canning Crops Association. M. C. Burritt tells how and why this occurred, and fearlessly fixes the responsibility. Mr. Burritt is himself a director in two large cooperative organizations and sells his own fruit through one of them. He knows what he is talking about.

Of course he believes in organization. He knows that it is the farmer's only way out of his marketing difficulties. But we all know that if cooperation is to succeed it is time for common sense thinking, plain speaking and fearless action. There has been too much of a tendency with all of our cooperatives to think of them as "cure-alls" and that they will run themselves. All that most farmers seem to think necessary is to sign up, pay the dues, and leave the rest to someone else. Cooperation is not a panacea. It is a business, and if not run on business principles, failure is sure. As Mr. Burritt so well says: "We don't buy cows and entrust their feeding and care to others without oversight and interest. Why should we take a share in a cooperative enterprise and leave it entirely to others to look after?"

The inevitable result of "letting George do it" is disaster and that is why the Canning Crops Association is in the ditch. In recent years hundreds of cooperative associations have been organized. Some of these are bound to fail, but the failure of one here or there certainly does not prove wrong the principle of cooperation. In fact, those organizations which live and bring better times to farmers will profit by these mistakes and these failures and the greatest profit will come through the increased sense of responsibility which every member of every organization must feel if the cooperative movement is to finally succeed.—The Editors.

their tomato prices from \$15 to \$20 and \$22.50 per ton, their pea prices from \$65 to \$80 a ton and to add to their sweet corn prices from \$5 to \$7.50 a ton—and this after opening prices had been announced and some contracts signed. Its members constituted nearly one-fourth of all the growers in the State. Professor Thompson believes that this organization put more than one million dollars in growers pockets this one year. Much business was done by the locals this year, on which they were to have paid the federation one per cent. Had this been collected and the central organization remained a federation, this chapter need not have been written. Its members and officers did not function well, few meetings were held and the early advantage was lost. Then the centralizing idea took hold.

In December 1921 a prospectus was issued calling for a merging of the Federation in a centralized State association with an iron clad

BIG 'C' LINE

RUBBER FOOTWEAR

Longer Wear Saves Money!

'Nebraska'

All Rubber Overshoe

This rugged overshoe represents the highest standard of material, workmanship and design. So well made that long wear and real comfort *can't help* but be there. Warm wool lining and a gusset reinforced against chafing of buckles. Wide extension White Tire Sole and 'Stubgard' toe and heel prevent snagging or scuffing uppers. The best cost less in the long run because it wears longer. *'Nebraska' can't be made any better!*

"Something just as good" CAN'T be sold for any less.

'Ruff Shod'

For real boot satisfaction you want 'Ruff Shod.' Has no equal for wear, and it's comfortable besides. Fits perfectly, can't shuck up and down at the heel. Wide extension sole protects uppers and does not collect mud. Look for the White Top Band and the Big 'C' on the White Tire Sole—then you know it's 'Ruff Shod.'

Look for the White Top Band and the Big "C" on the White Tire Sole.

Ask Your Dealer

Find out also about the other leaders in the Big 'C' Line, the 'Watershed' cloth top overshoe, the 'Warmfut' gaiter and 'Caboose' work rubber. Footwear for the women folks and the youngsters, too. If your dealer hasn't the complete line in stock he will quickly get what you want from our nearest office. Write for circular—give your dealer's name.

Keep Trespassers Off

We have had a new supply of trespass signs made up. This time they are made of extra heavy linen on which the lettering is printed directly. There is no card facing to be water-soaked by the rain and blown away by the wind. We have had these new signs made up of extra heavy material because severe storms will tear and otherwise make useless a lighter constructed material. We unreservedly advise farmers to post their land and the notices we have prepared comply in all respects with the New York law. The price to subscribers is 95 cents a dozen, the same rate applying to larger quantities.

My Engine Will Do the Work of 6

"I set out to build a farm engine that would have every feature the farmer wanted and none he didn't want. It has now been on the market six years. Thousands of satisfied users tell me I've succeeded. I'm proud to have this engine bear my name."
—A. Y. EDWARDS

EDWARDS FARM ENGINE

Try This Remarkable Engine FREE

There is no other farm engine like it. Simple in construction and easy to operate. It is only one engine, yet it takes the place of six engines. It will give from 1½ to 6 H. P., yet it is so light that two men can carry it easily. Set it anywhere and put it to work.

Change Power as Needed

It is a 6 H. P. when you need 6, or 1½ H. P. when you need only 1½, or any power in between. Fuel consumption in proportion to power used and remarkably low at all times. Adjustment from one power to another is instantaneous.

Burns Kerosene

Operates with kerosene or gasoline. Easy starting, no cranking. The greatest gas engine

value on the market. And you can prove all of these statements to your own satisfaction.

What Users Say

Ivan L. Blake, of Hannibal, New York, says: "Only engine economical for all jobs. I run a 28-inch cord wood saw, a 24-inch rip saw, a washer, a pump, and a grinder, and it sure runs them fine. It has perfect running balance, and it sets quiet anywhere."

Clarence Rutledge, of Manitoulin Island, Ontario, says: "Have given my Edwards four years' steady work and like it fine. It uses very little fuel. I run a 28-inch cord wood saw, also a rip saw, 8-inch grinder, ensilage cutter, line shaft for shop, churn, washer, separator and pump. Have had ten other engines and the Edwards beats them all."

Frank Foell, of Cologne, New Jersey, says: "It's a great pleasure to own an Edwards engine. I run a wood saw, cement mixer,

threshing machine, etc. Do work for my neighbors. Easy to move around and easy to run. I would not have any other."

Free Trial Offer

Now—I want to prove my claims to you. I want to send you an Edwards Engine for absolutely free trial. Just write your name and address on coupon and mail. I will send at once complete details about my farm engine and about my free trial offer. No cost or obligation. Mail coupon now.

American Agriculturist, January 3, 1925.

Some Good Farm Books

AT LEAST five books on farming have recently come from the press which are worthy of being read by every farmer.

One of these is "Farm Engineering" by Professors Behrends and Robb, published by John Wiley & Sons. This book is so practical and the explanations and illustrations are so easy to follow that no farmer should be without it. Farming, more than any other trade perhaps is a mechanical operation. Dozens of times a day a farmer is called upon to use his mechanical skill. Until the book by Behrends and Robb appeared there was little in print that could help. This book is based on experience, and it tells how to do a thousand and one mechanical jobs on the farm so simply and interestingly that it fills a real need.

The Great Fruit Book Is Here.

Another farm book that has claimed our attention is "American Fruits", written by Samuel Fraser, a noted fruit grower of Western New York, and published by the Orange Judd Publishing Company of New York City. The price is \$4.75, but the book is well worth it. It is the most comprehensive, the most readable, and most practical fruit book we have seen in a decade. "American Fruits" starts with a discussion of the problems of the young fruit grower, taking up the relation of fruit to climate, soil, tillage; the varieties of all the known fruits, the most recent knowledge on diseases and how to handle them; the various marketing problems of the fruit grower, including storage, transportation, dried fruits, and the cost per acre of growing the different kinds of fruits. In the latter part of the book there is a very interesting description of the various tropical fruits, many of which are little known to North Temperate consumers. Among these are the pomelo, lime, citron, satsuma, kumquat, breadfruit, pineapple, the date, and many others. The appendix contains very comprehensive variety descriptions. This volume will be invaluable in every college and high school library and to every farmer who is making a business of growing fruit.

Farm Management, by App

"Farm Economics, Management and Distribution" by Frank App, Professor of Agricultural Economics of the New Jersey State University, is another good farm book just off the press. It is published by J. B. Lippincott Company of Philadelphia. Mr. App's book discusses the problem of making a living on the farm under present conditions, compares agricultural with city incomes; the standard of life in the country as compared with that of the city; and then takes up in detail the problems of production and marketing from a straight business standpoint. The price of the book is \$3.00.

A New Book by Warren.

Perhaps no author of agricultural text books is better known in the United States than Professor George F. Warren of Cornell University. John Wiley and Sons are just bringing out a text book, entitled "The Agricultural Situation", written by Prof. Warren in cooperation with Professor F. A. Pearson. Prof. Warren has the power of making dull statistics talk in so startling a manner that they read like a story and stay in the mind afterwards. Most of his new book is devoted to statistics. It is filled with pertinent comment in Dr. Warren's usual pithy and readable style. The chapter on taxation alone is worth the price of the book.

Feed Hogs Tankage. Tankage is not a substitute for corn, but should be used to supplement it in hog feeding. It replaces a large part of the corn and insures satisfactory and economical gains which the farmer with a short crop of corn cannot afford to neglect. At the present price of grain, tankage is probably the cheapest feed, considering result obtained.

*Equipped With the
Famous WICO Magneto*

Easy! Now Only \$5⁶⁹ Puts a Witte to Work

GET away from high-priced hired help—get away from the hard, back-breaking chores with the rugged, dependable WITTE Throttling-Governor Engine. There's an extra profit of \$500 to \$1,000 every year you have this engine on your place doing the hard jobs. WITTE ENGINES deliver 50% surplus power with a big saving in fuel. So simple that a boy can operate it. Trouble-proof, too—the WITTE works every day in any kind of weather. Easily moved from job to job, it answers every power need on your place.

Fully Equipped

The WITTE has many exclusive features not found on any other engine, such as the celebrated WICO Magneto, the best system of high tension ignition known. Far superior to the old-style battery engine—dependable and economical. A new device makes starting easy in the coldest weather—just a turn and away it goes. The perfected motor-style carburetor and WITTE Hot Spot get the last bit of power out of every charge of fuel. Any speed you want by merely turning a thumbscrew on the Witte Speed Regulator. The WITTE ENGINE is scientifically designed and ruggedly built to last a life-time.

The Famous Thirty Year WITTE Crankshaft Guarantee

WITTE Crankshafts are Guaranteed absolutely against breaking, bending, warping, crystallization and wear for thirty (30) years, regardless of nature of work done, climate or any other conditions. Ed. H. Witte,
WITTE ENGINE WORKS.

I know of no other engine crankshaft with such a guarantee. WITTE Crankshafts are drop forged and heat treated in oil. They are ground to a glass finish on precision lathes to an accuracy of one-thousandth of an inch. Is it any wonder that WITTE Throttling-Governor Engines are known all over the world for their continuous superior performance?

Uses Kerosene Gaso- The WITTE uses any fuel—kerosene, line, Distillate or Gas gasoline, distillate or gas. Costs less than (No Special Attachments Needed) 2 cents an hour to run on a full load. No need to bother about fuel prices—always use the cheapest and get the best results—50% surplus power.

Sold Direct From Factory to You—Save 20 to 40 Per Cent I employ no salesmen—WITTE Throttling-Governor ENGINES come from my factory direct to you at the lowest price. You can save as much as 40% by buying direct.

Easy Terms

I make it very easy for anyone to own a WITTE—if you want easy terms you can have them. Take a year to pay if you want to—just suit yourself on time.

90 Days FREE Trial on Any Size

WITTE Throttling-Governor ENGINES come in all styles and sizes from 2 to 25 H-P. So confident am I that this engine will make you money and is the best and cheapest power you can buy, that I will gladly let you try a WITTE for 90 days at my risk. And if for any reason it's not right, I simply say "I'LL MAKE IT RIGHT AND IT WON'T COST YOU A CENT."

The baby beef feeder got his watch

Letter from Ohio's Boy Champion
Baby Beef Feeder for 1924

DR. HESS & CLARK, Inc.
Ashland, Ohio.

Dec. 9, 1924.

Gentlemen:

In the fall of 1922 I decided to enter the boys' and girls' Baby Beef Club.

These beeves were put out by the Montgomery County Fair board, among boys and girls of Montgomery County.

These beeves were fed by boys and girls and exhibited at Montgomery County Fair. I met with defeat, as I obtained ninth prize.

Last fall I decided to raise another one. So on November 17th I received my Aberdeen Angus beef to be raised for the Fair of 1924.

The first month he gained only five pounds and did not eat well. At the beginning of second month I began to feed Dr. Hess Stock Tonic, along with his daily rations. At the end of second month he gained sixty-five pounds.

As I saw it was a great help in making him gain more, I continued feeding the Stock Tonic.

On 1st of September I exhibited my Baby Beef at Montgomery County Fair. On September 2nd the thirty-one beeves were judged—I obtained first prize in county and first in State of Ohio.

It made a gain of 525 lbs. in 290 days.

The prizes I received were trip to Columbus, trip to Chicago and gold watch, given by American Angus Association.

I feel as though it was through the feeding of your Stock Tonic that I obtained first prize. I wanted you to know this, as my experience may be of great benefit to other stock raisers.

Yours very truly,

LORNE B. GILBERT,
Germantown, Ohio, R. F. D. No. 1.

Cold Frames For Everybody An Easy Way To Get Early Vegetables

By DAVID STONE KELSEY

It is a shrewd farmer that gets paid for his crop production these days, but there is one crop—as sure as milk—that always pays, and pays double, the farmer's garden.

Go into any lunchroom. Meats excepted, the common garden products, fruits and vegetables alike, are the most expensive items of the menu. One can fill up cheaply on field-grown stuff—bread, potatoes or corn-cake—but onions, lettuce, tomatoes, carrots, cucumbers, cauliflower, cantaloupe, raspberries—anything! My, but they will soak him for any of these!

Therefore the farmer's own garden is his best paying crop, for about always he eats at home. Those whom he best loves eat there too and both can live on the fat of the land—if he has or has had a good garden.

Gardening Makes Better Husbandmen
That is one "pay" that the gardening farmer gets. The other is equally sure and shows up in actual dollars; for the practice of gardening soon makes of him a better farmer—more thorough and so, more successful. It is a far cry from the tractor plow and grain-drill to getting down on both knees of an April morning and looking keenly over a baby transplant to inquire: "Good-morning, little one! How are you? Have you had a pleasant night? Have you plenty to eat, that is good for you, and within easy reach? Are you comfortable?"

Does that sound ridiculous? All right, then answer this: Which is the successful dairyman; he who studies closely the comfort of his animals, or the rough-shod, careless stock man?

Plant comfort is the key note of field-crop success, precisely as animal comfort is of livestock success, and the man who makes a success of his garden—in learning plant comfort there—is forever a better, more successful farmer too.

Cold Frame the Ace in Gardening

The first winning card in gardening is the cold frame. One reason why so few farmers have a really adequate garden is that they have had no cold frames, having dismissed the idea as difficult or too fussy. Yet it is not at all hard to succeed with well-set frames, and the little work comes when time is plenty—February and March. There is almost no expense—no fire-heat or manure-heat used, and time and attention are repaid by the keen interest developed.

Great for the Boy

There is no more wonderful invention to keep a boy interested and teach him the fundamentals of successful farming—than in setting and running cold frames.

Late March days are longer and brighter than even September. It is only the ground that is cold in Spring. After March 20th (on which date the sunlight day is exactly 12 hours long all over the world) the farther north you are, the longer is any day. But the sun's rays are more slanting, and must be "caught," that is all. This is the secret of the famous "Montreal muskmelon." By June, the Canadian day, of -bright, clear-air sun, is sixteen or somewhere, seventeen hours long. In our Klondike, the June growing day is 22 hours long! Forty-seven of Long Island's sunshine days per month up there! No wonder their oats and potatoes grow like a miracle!

The Principle of the Cold Frames

The principle of the cold frame is that of catching and utilizing the strong March sunshine—six weeks ahead of time. The resulting products are two: early stuff directly for the table, and excellent transplants for the open garden—cabbage, beets, carrots, cucumbers, summer squash, onions, tomatoes, eggplant, even lima beans—practically everything but sweet corn. Here is a record from our cold frames and resulting garden: The spinach only, was started in the frames in the fall

(latitude of central New York state). From the frames, in March, April and May: spinach, rare-ripes, radish, cress, lettuce, beet-greens, young beets and young carrots. From the garden: beets, June 8th, carrots June 14th, Cabbage June 20th, potatoes June 25th, Cucumbers July 3rd, summer squash July 8th, and tomatoes July 15th.

Just show this list to the Madame—she who each day has to rack her wits wild to provide that least bit of variety, relish and breadth of menu for her family thru these spring months.

Where to Place the Cold Frame

A cold frame should be set south of a windbreak, a tight building or high-board fence, fronting south or south-south-east—where there is no shade all day. This arrangement takes advantage of the natural ground-warmth, for the cold frame must squat tight down on, or a little into the ground, and without, be well banked up even with the glass on every side. The frames slant moderately, 15 inches above the inner surface at the upper end and 10 inches at the lower.

Our frames are made of old piano box lumber. The eight sash are full-length, second-hand storm windows, bought in town of a house-wrecking firm. Kept well painted, they last a life-time.

How We Do It

We usually fork up the ground in late fall, working in plenty of well-decayed manure containing no weed or grass seed, but whether or no, we like to have our cold frame ground freeze up hard once. After this, or in making new ones, in early January, we clear away all snow, put the frames in place and over them lay a deep blanket of leaves or straw—to draw the frost out.

Promptly, in early February this is removed and the glass placed on, putty side up—so fitted that no cold winds can seep under, and no rains leak through. At this time there must also be provided a warm cover for the glass, to let down over it each night and to be kept there at all times when the sun is not actually shining, to conserve the heat so far absorbed. We make this quilt of old sacking or waste rags, or cast-off quilts. Better ones can be bought, but our aim is to keep down costs.

We sometimes fit the pads to a light frame, the edge hinged so that the whole thing can be instantly turned up and back against the wind-break, when not wanted. This can be rigged with a pulley so that a child can let it down any time the very minute the sun leaves the frames or it clouds up.

When We Plant

Whenever the earth is warm—feels good and comfortable to the hand thrust down into it—then we plant, rows seven inches apart, running up and down. A close watch must be kept upon the free air thermometer—even into late April. In March it will freeze right through the glass, or anyway, chill and greatly retard all growth.

Our estimate is that our eight frames average us easily \$50. worth of stuff, besides the handiness of it, the far better plants free, for setting out in the garden, and best of all, the fun of success and of giving away the surplus.

Gran'pa says: I always feel that even if a machine cost nothing, I'd hate to see it standing around like an eye-sore all winter.

Poultry house lights should not be used on breeders until January 1 to 15, say poultrymen at the Ohio State University.

Rabbits and mice lose interest in an orchard that offers no material for building nests.

Reduce Your Labor —
Increase Your Profits

IRON AGE Drills and Wheel Hoes include special and combined tools to suit every grower's need. Iron Age Seed Drills sow so accurately that thinning is unnecessary, if you have confidence in your seed. The operator can always watch the dropping seeds—no chance for skips.

Our No. 306 Combined Hill and Drill Seeder, Single and Double Wheel Hoe is known to thousands of Iron Age users as "The Complete Gardener." It sows all kinds of garden seeds; can be quickly changed from Seeder to Wheel Hoe, single or double wheel style. Cultivates, ridges and furrows. Takes all drudgery out of gardening; multiplies the pleasure and profit.

HARRIS
SEEDS

The Most Successful Gardeners use HARRIS' SEEDS

That's one reason they are successful. Another is that, to succeed, a gardener must be a shrewd man and one who knows where to buy seeds to the best advantage. Harris' seeds are grown in the north and produce earlier and better crops than seeds grown further south. They are raised according to modern scientific methods of breeding which keep them up to the highest possible standard as to quality and yield.

We are large growers of Farm Seeds, Vegetable Seeds, Flower Seeds, Gladiolus, Dahlia and other bulbs and many flowering plants. Our new catalogue in colors contains many unusual suggestions for your garden and offers you the opportunity of buying seeds of a very superior quality direct from the grower at wholesale prices. Send for Free Catalogue. If you raise vegetables for market ask for our Market Gardeners' price list also.

JOSEPH HARRIS CO., R. F. D. 12, Coldwater, N. Y.

This Big Catalogue is Your Opportunity For Saving

YOU should have this valuable book in your home. You should know the right price to pay. You, too, can save money on everything you buy.

And what an opportunity for saving this book brings to you! In appearance it is a book. Actually, it is one of the largest general stores in the world brought right to your door. Thus you have before you the most complete assortment of goods and can select exactly what you want.

How the Lowest Prices are Made for You

Our goods are bought for spot cash. Cash always buys cheapest. They are bought in the largest quantities—taking even the whole output of a factory. Our buyers search the markets of the world for you. East, West, South, they go—to Europe, wherever there is a possibility of buying standard reliable merchandise, at lower than market prices.

Sixty million dollars' worth of merchandise has been bought for this book. Bought in quantities that compel low prices. Bought so that whatever you need, the merchandise is ready for immediate shipment to you.

"Ward Quality" Means Reliable Goods Only

But in our world-wide search for bargains, we never lose sight of Quality. We do not believe

you want "cheap" goods. We do believe you want good goods, sold cheaply.

At Ward's we never sacrifice quality to make a low price. We will not deal in "cheap" goods that are not worth the price you pay. We will not cut serviceability to make a lower price. Your satisfaction with everything you buy, we place first.

Everything for the Home, the Family and the Farm

The Woman's needs are nearly all supplied in this Catalogue. The most beautiful fashions for Spring and Summer, dresses, hats, coats, everything in wearing apparel in the best style for the school or college girl, the young woman or the matron, has been selected in New York by our fashion experts.

Every Man's wants are supplied. Almost everything a man or boy wears or uses around the home or farm, at prices that mean a big saving.

For the Home, there is every new thing, from household inventions to the newest patterns in rugs and curtains, the best designs in furniture. Everything that goes to make a home more delightful and more convenient is offered at a saving.

Your Orders are Shipped Within 24 Hours

When your order comes to Ward's it is appreciated. It is given careful attention immediately. Most of the orders are actually shipped within 24 hours.

Filling in this Coupon Brings the Catalogue Free

We want you to become acquainted with Ward's. We offer you this catalogue to get acquainted with you. Write for your copy. It costs you nothing to find out for yourself the saving, the satisfaction Montgomery Ward & Co. offers you.

Avoid the Winter Slump in milk yield—

The winter months are the critical period of the year for the dairyman. The herd may come through the summer showing a nice profit—only to see it wiped out by a slump in milk production, or disease, or both.

No need to suffer an annual dairy loss in winter. By investing a few cents a day in *Kow-Kare* the milk-making organs of all your cows will be invigorated so that the strain of dry feeding will not break down their production.

Kow-Kare is a medicine-*tonic* that acts directly on the milk-making organs, the digestion and assimilation. It builds a *permanent* vigor in these key organs, enabling the cow to thrive and milk to capacity on the regular winter diet.

To use *Kow-Kare* is a sane investment. It is health and profit insurance. Its slight cost is returned many times in the quickly-noticeable improvement in milk flow.

The *Kow-Kare* feeding plan is winning thousands of new recruits among dairymen yearly. The usual method is to feed a tablespoonful of *Kow-Kare* twice a day, one week of each month during the winter. The cost averages only about a cent a day per cow.

Begin now with *Kow-Kare*. Your dealer has it—feed stores, general stores, druggists—in \$1.25 and 65c packages. Order direct if yours is not supplied.

DAIRY ASSOCIATION CO., Inc.
LYNDONVILLE, VT.

Do You Have A Sick Cow?

Kow-Kare has back of it a quarter-century record of success in the treatment of such cow ailments as Barrenness, Abortion, Retained Afterbirth, Scours, Garget, Milk Fever, Lost Appetite, etc. It builds up the digestive and genital organs to a vigor that makes them function naturally.

As an aid at the Calving period *Kow-Kare* has no equal.

Send for valuable free treatise, "The Home Cow Doctor."

\$25 Down Buys Holstein Bull

We have several exceptionally well-bred registered Holstein bull calves that we offer for sale on the installment plan. Here is your opportunity to break into the purebred game without an immediate heavy outlay of cash. This should appeal to the average farmer who wants to boost the average production of his herd without having it cost him too much money right on the jump.

A Double Descendant of "OLD DUTCH"

One of these offerings traces back, both on his sire's and his dam's side, to Dutchland Colantha Sir Inka, "Old Dutch," the greatest proven transmitting son of Colantha Johanna Lad, the famous "milk" sire. The calf's sire is a grandson and his dam is an own daughter, of Dutch—milk blood on both sides of the family. Dutch has 95 A.R.O. daughters, 16 having 7-day records of 30 pounds of butter or better, two are in the 1000-pound class. The calf's sire has 22 A.R.O. daughters with records up to 29.83 pounds butter in 7 days and is the son of a 30-pound cow. This well-bred individual can be bought "on time."

Feeding Lambing Ewes

Mark J. Smith Tells How He Gets Results

I am a reader of *AMERICAN AGRICULTURIST* and am a breeder of sheep as are lots of others in this locality. I would like to see a good grain ration published, one suitable for lambing ewes. In this locality we try to get early lambs or hot house lambs as they usually bring us better money than late ones. I would appreciate a grain ration for ewes before and lambing so that the lambs will grow fast and fat up quickly for best results.—J. P. C., New York.

The sheep industry of your section is quite distinctive where large flocks are kept on high-priced land and affords an eloquent testimonial to the value of sheep manure in the production of truck and other intensive crops.—Mark J. Smith.

Points to Consider in Selecting Milk Goats

ALL milk goats are not profitable animals but here are some points to consider in purchasing stock.

Each breed has its characteristics, but personally I know nothing of importance about any other breed than Saanens. One starting in the business would no doubt do best to select the breed which the majority of breeders nearest him own, as by so doing exchange at breeding time and accommodation in buying or selling would probably help considerably.

When purchasing a goat considerable attention should be paid to the conformation of the animal. A grade doe is one whose sire is pure-bred and if the dam is also a grade, each generation brings it nearer pure. Pure-breds are those having both sire and dame of pure-bred stock of the same breed. Cross breeding of pure stock (stock of different breeds) will result in kids having to be registered as grades, the breed of the kid being determined by that of its sire.

Fine Points of Good Milkers

Some does give a lot of milk when fresh but only for a few months, will milk continually and are hard to dry off,—so giving more milk in the long run. As a rule good milkers have a rather long but well made head with broad forehead, and tapering toward the muzzle. The horns, if any, should be small and tapering. The doe should possess a feminine appearance especially about the face and her ears should not be coarse. A masculine looking doe will rarely make a good milker. The neck should be rather thick and tapering toward the throat. A long deep body usually indicates a heavy milker. Depth back of the shoulders indicate a good constitution. A good type of doe should be wedge-shaped—that is, she should be deeper at hind quarters than chest, also broader over hips than at shoulders. The back of the animal should be straight and free from surplus flesh as their food is converted into milk rather than fat. The hip bones are generally prominent and should not be too close together. The hide should be loose and of medium thickness. I large udder is not always an indication of a good milker—some of the best producers show very little udder when dry, while a large udder may be meaty. The teats should be of fair size—well apart and will develop with milking.

Doe Best At Five Years

If a registered goat is purchased the buyer should receive a certificate of registry transferred to him. By purchasing kids the cost is much less.

The doe is said to be in her prime when five to seven years of age and they generally live to be twelve or thirteen years of age.

In selecting a buck he should differ from the doe in those points where masculinity shows itself. The head will be stronger and more masculine. The neck will have a prominent crest and the shoulders will be heavier and the back more masculine. The hips will be somewhat narrower and the hide may also be a little thicker. The buck should always be pure-bred and it is best to find out all particulars concerning his ancestry.

Lambing Drains Resources

Ewes that are nearly due to lamb are undergoing a heavy drain on their resources—during the last month the unborn lamb develops rapidly—we are told that one third of its weight is added during this period. Within a few hours after lambing a ewe will have lost twice the weight of the lamb. Obviously bone and muscle building materials are needed by the ewe and fortunately these same materials will encourage the milk flow after the lamb is born. The old reliable feeds for breeding ewes are: clover or alfalfa hay, whole oats or barley and oats and wheat bran. Other valuable feeds are: root crops, corn silage, bean pods and corn fodder and I have known sheepmen to fill up the racks with straw at bed time just to add variety to their roughage.

At the Indiana Experiment Station it was found that with 160 pound ewes a ration of oats .35 pounds, corn silage 1.7, mixed hay 2.96 caused a daily gain of .16 pounds over a period of 90 days. Another ration fed consisted of grain mixture of oats two parts, bran one part, corn one part, 1.04 pounds of this mixture being fed with four pounds of clover hay. The daily gain was .14 pounds over a period of 120 days. These are given to illustrate what is required by a pregnant ewe in a day when she is gaining as she should.

A Good Old Standby

It is difficult to improve the much use grain mixture of two parts whole oats and one part wheat bran fed with mixed or clover hay—ewes fed clover hay with this grain mixture should really have some carbonaceous roughage along with such a ration. Good bright corn stover is excellent. Properly speaking stover means corn with ears removed. Silage is good for it supplies the much needed succulence without which a real professional shepherd would feel lost. In your country it would seem that much low-priced cabbage could be used to supply succulence. After lambing, ewes that are highly fed on hay and grain may produce milk that the lambs cannot handle.

It is an old rule that a ewe will eat her weight in hay a month but much depends on what she has in addition to hay. Very little corn should be fed pregnant ewes in good condition close to lambing time—especially our mutton breeds.

For hot-house lambs you will no doubt feed the lambs behind creeps. A good mixture that has been used successfully to start the lambs off is: be a little thicker. The buck should crushed oats 2 parts, ground corn 2 parts, wheat bran one part and linseed oil meal one part.

Locating Trouble Makers

Dairymen Who Found and Sold Non-Producers

WHETHER you keep cows, or your cows keep you, you will be interested in the records given on this page of what the men are doing in different cowtesting associations. Although it is easier to get good records by belonging to a dairy improvement or cowtesting association, it is not absolutely necessary. Any dairyman can get some very valuable records himself if he is willing to make a little additional effort. As far as the butterfat is concerned, it is fairly constant for the breed. It is the amount of milk that the cow gives that really determines the biggest part of the story. Therefore, the chief way of finding whether or not a cow is any good is to weigh her milk.

It is not necessary either to weigh every day. Of course, this is ideal for more interest would be taken, in her production from day to day if daily weights were taken, but nearly as good results can be obtained by weighing the cow's milk at the morning and evening milking once a week and taking the result as an average for that week.

HAMILTON

R. H. Bresee

There is more interest being shown in the association work in Madison county at the present time, than at any time since the association was organized nearly five years ago. The highest herd in the association is a grade Holstein herd of 32 cows, 25 of which are in milk, the average of which for the month of October is 1187.2 pounds milk, 42.7 pounds fat. This herd was purchased by Mr. F. E. Williams, from different farmers around this section. The roughage is all hay, of good quality, and the grain ration is equal parts, wheat mixed feed, hominy, and oil meal, which gives us about a 20 per cent. protein ration. This association has taken on two new members this month, and has one ready to start next month. The boarder cows fare hard in my association, as the members realize that it does not pay to have them around.

MONROE

G. E. Upton

In welcoming our new members it may be well to note that some have already taken steps to improve their herds. For instance, some have sold off their entire grade herds and in their place purchased a few purebreds as a

FIVE HIGH COWS FOR BUTTERFAT IN THE DAIRY IMPROVEMENT ASSOCIATIONS OF NEW YORK STATE FOR SEPTEMBER, 1924

Owner	County	Breed	Age	Lbs. Fat	Lbs. Milk
W. W. Fortune, Essex, N. Y.	Essex			67.4	1606.2
M. R. Pardee, N. Clymer, N. Y.	Chautauqua	Short Horn		65.8	1644.0
P. Schneible & Sons, Rome, N. Y.	Oneida	G. H.	8	64.1	1830.0
L. Anson, Clinton, N. Y.	Oneida	Ayr.	7	62.7	1959.2
O. E. Cross, Niobe, N. Y.	Chautauqua	Jersey	13	61.5	750.0

Even getting the weights once a month is better than nothing. All that is necessary are weight sheets, which AMERICAN AGRICULTURIST will be glad to furnish upon request; a pair of milk scales, which can be supplied by almost any good hardware store, dairy supply house, or mail order concern; and interest enough to take the trouble to do the weighing.

This is the beginning of the year; why not give it a trial and find out for sure which individuals in your dairy are paying for their feed and which you are carrying at a loss?

There follow the names of dairymen, many of them owners of grade dairies, together with the names of their cows which have made good in cowtesting associations in New York State during the month of October. Look them over. Probably some of these men are your neighbors. The information is supplied by Mr. George W. Tailby, Jr., supervisor of Dairy Improvement Associations of New York State.

SHERMAN L. B. Mapes

The four highest herds for October are:

	Lbs. Milk	Lbs. Fat	No. Cows
N. O. Hadley	1127	35.8	12
John Ganton	888	31.3	8
J. B. Lowe	849	31.2	13
C. G. White	625	30.5	18

CHENANGO VALLEY W. W. Sadler

Mr. Neidlinger's cow, "Aaggie" still stands at the head of the list of butterfat and this is her second month since freshening. For October she has 71.42 pounds of fat and 1785.6 pounds of milk. Mr. Peckham has a cow, "White Face" that has tied Aaggie for pounds of milk but not for fat.

SOUTH LEWIS H. L. Stahlman

During October 232 cows were tested, 220 milking and 12 dry. Earl Potter's No. 9 shows the most profit for the first six months of the year. She produced 7637 pounds milk and 277 pounds fat, average test 3.62. At \$1.88 per cwt. we have \$143.42 for milk and taking out \$37.35 for cost leaves \$106.07 profit over feed cost. Six cows made the honor roll. F. K. Brooks, Mgr., of Constable Hall Farm, Constableville, N. Y., recently purchased purebred Holsteins for foundation stock. These females have very creditable records. Lewis County farmers who are in the market for high production bulls in the future should look at this stock so near at home.

foundation herd while others for the time have merely sold their low producers and either purchased better grades or a few pure bred. Already we find some new members who have cows appearing on the honor roll. One of the most striking facts to be learned in connection with the honor roll, is that there appears to be an utter lack of sympathy for "Star Boarders" on the part of the owner whose cows appear most frequently on the honor roll. In other words, these men have no time for an average, a fair or a pretty good cow. She has to produce the goods or lose her boarding place.

BOONVILLE

H. L. Stahlman

During October 398 cows were tested, 342 milking and 56 being dry. There were 27 cows on the honor roll, 14 of which belonged to Thomson & Son at Holland Patent. Schneible & Sons' "Betz" a grade Holstein is high this month. She produced 66.7 pounds fat from 1906.5 pounds milk.

FIRST ONEIDA

K. Scholefield

Earl Davies had high herd average, with his 23 cows averaging 935 pounds milk and 30 pounds butterfat. Kenotin Farms second with herd of 23 averaged 900.1 milk and 35 pounds butterfat. This includes only the cows in milk.

SARATOGA

H. L. Barnes

Clifford Rugg has a grade Guernsey that has been fresh six months making 340.2 pounds fat, her high month being July when she made 75.6 pounds fat, low month October 40.3 pounds.

DRYDEN

W. A. Boyd

The herds of Thomas Halbert and Howard Howland passed clean Tuberculin tests last month.

Ten boarder cows were sold during the month.

* * *

Kill a Kow!

I will be glad to cooperate, providing at least one thousand other dairymen will do the same, in selling or killing FOR BEEF PURPOSES at least one of the poorest producers in my heard between now and March 1, 1925.

DeLaval Separators Sold

De Laval Separators have done more than any other factor to change dairying from a "pin money" proposition to the largest and most profitable branch of agriculture. The original centrifugal separator to begin with, De Laval's have led in every important improvement, and today the latest

Improved De Laval Separator

is generally acknowledged as being the best cream separator ever made. Among other improvements and refinements it has a self-centering bowl which eliminates vibration, causing it to run smoother and easier. It gives you a richer, smoother, higher-testing cream, and skims cleaner under all conditions. It soon pays for itself.

Trade Allowance

Old centrifugal cream separators of any age or make accepted as partial payment on new De Laval's. Sold on easy terms from

\$6.60 to \$14.30

Buy Empire State Holsteins

IN THE

NEW YORK STATE SALE (FIFTH ANNUAL)

Syracuse, N. Y. Jan. 14-15

State Fair Grounds Coliseum

Over 30 of New York's Leading Breeders of Holsteins are consigning some of the best animals of the breed in the State to make this sale a success.

About half the herds consigning are **FULLY ACCREDITED**, many more have passed one or more clean tests, and all are under Federal Supervision.

All Guaranteed Under a 60-Day Rest

GREAT PRODUCING COWS with records up to 33 lbs. butter in seven days—the kind that pay a profit at the pail. The Holstein is the cow for the Farmer and Dairyman as well as for the Fancier—particularly the kind of Holsteins that are offered in this sale. They have Size, Capacity, Type, Quality, Rich Breeding, and are Real Producers.

Bulls For Herd Sire Purposes

The bulls offered are few in number but very choice—good enough to head really high class herds. About half a dozen of them are from dams with records of 30, 33, 34, 35 and 36 lbs. butter in seven days, and others not far below these figures. They are sired by New York State's best and most famous sires.

The following list of responsible breeders are consignors:

New York Farm News

Western New York Crop Notes by M. C. Burritt

WINTER is on in earnest now—a little earlier than usual too. Since my last notes were written we have had considerable open weather in which most of the ditching out of fields for winter has been accomplished and a good bit of fall plowing done. At present, December 20, we are in the grip of a peculiarly severe ice storm. For nearly two days it rained a fine mist which froze as soon as it fell. Roads are a glare of ice, so hard that chains on the car wheels do not dig in, but become like skates under the cars. I never saw more slippery roads. The trees too are all covered with a coating of ice. Small branches and possibly buds have been broken by a wind which snaps them off, brittle with ice as they are.

Both the cabbage and the apple markets have been draggy all the month. Cabbage is selling for from ten to fifteen dollars a ton F. O. B. but it has to be choice to bring the top price. The average price is nearer twelve dollars. When storage shrinkage and handling costs are deducted, this is no better than the fall price.

Apple Market Dragging

The apple market has not responded to the storage report of December 1 as was anticipated in spite of the fact that this showed about 50 per cent. less holdings than a year ago. Prices have held very well but sales are not at all brisk. Lately there is some tendency to reduce prices slightly in order to move the fruit.

The present and the following week represents the first real hard farm work due both to the weather and to the holiday season. The last year's work is pretty well closed up or as near as it is likely to be. There is much corn to be husked and more plowing might have been done. But these tasks must go over into next year now.

It won't be long now before farmers' thoughts will be turning to the new year's work ahead. Purchases of seed, fertilizer, new equipment hinge on the making of another year's plans. Then the pruning, the working up of the year's wood supply, overhauling equipment and other endless tasks must be done before spring opens up.

Good Time To Read

These ought to be days for reading. Most of us do too little of it. In taking an inventory of reading matter, I am amazed at the amount of it, especially good free agricultural and business matter. I find no less than ten good publications on my desk all of which are useful and all of which I try to read more or less. Two of these I value especially: Dr. Warren's "Farm Economics" published monthly by the College of Agriculture and "Agriculture Economics" published monthly by the U. S. Department of Agriculture. These are quite necessary to keeping abreast of economic conditions. Other good United States department publications are: "Agricultural Cooperation," interesting news of cooperatives everywhere, "Marketing Activities," "Crops and Markets," the "Official Record," and market reports. Add to these the County Farm and Home Bureau News and the National City Bank monthly statement of economic conditions and there is no reason for a farmer being uninformed about his business life and conditions.

But these of course, aren't all the available current reading matter a farmer should have available. "American Agriculturist," "The Dairymen's League News" and the State College Student Magazine, "The Cornell Countryman," give one the farm news of the day and stimulate one's thinking. For general reading the "National monthly maga-

zine, two women's magazines, two religious papers and two children's magazines, completes the list. This is ten more subscriptions papers to be added to the free list, making twenty in all for current reading. Is it too many? Of course, even a large family cannot read them all, perhaps not even look them all over. Would it be better to concentrate on a half dozen?

Then, of course, there are a world of books, many of which every well-informed person must read. Here discriminating choice is important. I am especially fond of good biography. The helpful direction in reading which goes with a book-shelf like the "Harvard Classic," wife and I find most stimulating and helpful for "fifteen minutes" a day.—M. C. Burritt.

G. L. F. Buys Share In

Big Fertilizer Plant

THE Cooperative G. L. F. Exchange of Ithaca, N. Y., recently completed the purchase of a part interest in the Summers Fertilizer Company at Baltimore, according to a recent announcement by N. F. Webb of Cortland, president of the Exchange.

A plant, which is located on deep water in the Baltimore harbor, formerly owned by the Hubbard Fertilizer Company, has been purchased by the Summers Company. During the past several weeks repairs and additions have been made to complete its facilities for handling a large volume of mixed fertilizer, acid phosphate and fertilizer ingredients. The plant is now in operation.

"The board of directors and management of the G. L. F. has contemplated this move for some time," says Mr. Webb's statement. "The purchase of an interest in the Summers Company is in accord with our policy of controlling the manufacture of the farm supplies handled by the Exchange for farmers."

"This arrangement gives patrons of the Exchange the advantage of combining their fertilizer volume with that of the Summers Company, and it gives the Exchange the very important advantage of an experienced manufacturing personnel, already employed. The location of the plant is particularly desirable, as it can receive raw materials direct from ocean going vessels."

"The announcement has already been made to G. L. F. shareholders that savings during the first year or two will be held as surplus; thereafter such savings will go into the patronage dividend fund and will be returned on a pro-rata basis to patrons."

Mr. Webb and W. L. Gay, manager of the G. L. F. fertilizer service, have been made members of the board of directors of the Summers organization. Mr. Gay is also on the executive committee.

New York County Notes

Essex County—October was a very dry month here in Essex County which aided the harvesting of crops but delayed plowing. Less plowing than usual has been done this fall due to dry weather. Potatoes were a bumper crop, but at this writing the second week in December they are rotting badly. Much corn is fed to pigs and cattle. Threshing is done. Some oats ran too poor to thresh. Fall pigs are selling at \$2.50 apiece at 4 to 5 weeks old. Eggs have been bringing as much as 65c a dozen.—M. E. B.

Steuben County—We have been having some very mild weather for mid-December. Farmers are threshing beans, cutting wood and butchering. The bean crop has turned out to be a poor one. Pods are not filled out. Not many potatoes are being sold at present. Most are being stored for higher prices—35 cents being paid at the present time. Common farm horses are scarcely worth anything. Many tenants are leaving the farms.—C. H. E.

Reviewing the Latest Eastern Markets and Prices

MILK PRICES

THE Dairyman's League Cooperative Association announces the following prices that dealers will pay the League during the month of January for milk testing 3% in the basic zone of 201 to 210 miles from New York City. It is to be understood, of course, that the prices mentioned below are not received by the farmer, but go into the pool. They represent the prices dealers pay to the League.

Class 1 Fluid milk.....\$3.07
 Class 2A Fluid cream..... 2.10
 Class 2B Ice cream..... 2.25
 Class 2C Soft cheese..... 2.15
 Class 3A Evaporated whole milk
 Cond. whole milk..... 1.90
 Class 3B Whole milk powder.... 1.85
 Class 3C Hard cheese other than
 American..... 1.65

Class 4 price will be based on butter and American cheese quotations on the New York market.

These prices are the same as those for December, with two exceptions. Classes 3A and 3B have advanced 10c in each case.

Sheffield Producers

The Sheffield Farms Producers announces the following prices for 3%

milk in the 201 to 210-mile zone:

Class 1	\$3.07
Class 2	2.20
Class 3	1.75

Class 4 price determined by butter and cheese quotations on the New York market.

Class 1 advanced from \$2.80 to \$3.07, while Class 2 advanced 20c, and Class 3 advanced 10c over December prices.

Non-Pool Cooperative

The Non-Pooling Dairyman's Cooperative announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1 \$2.80 | || Class 2 | 2.20 | |
| Class 3A | 1.80 | |
| Class 3B | 1.75 | |

Class 2 advanced 20c over the December price, while Class 3A advanced 20c.

Interstate Producers

The New York State Milk Producers Association (Philadelphia Price Plan), announce the receiving station prices or the price to the farmer in the 201 to 210-mile zone from Philadelphia for 3% milk is \$2.19. In the 101 to 110-mile-zone, the price is \$2.29.

BUTTER MARKET EASIER

The butter market has taken on an easier tone and in some quarters it looks as though a weakness will develop. Fresh goods have been coming in quite freely which, added to the enormous amount of business that is being done in storage butter, has resulted in considerable accumulations and the resulting easier feeling in the market. Just before Christmas, there was very free buying on the part of jobbers of fresh goods to carry over the holidays. In general, however, the buying is cautious and only heavy enough to meet current needs. As a result fresh goods have not cleaned up as well as they should.

CHEESE MARKET FIRM

The cheese market continues to maintain its firm tone, although trading has been a little bit quieter and prices have been maintained right along. Advices from the West indicate that prices are higher out there and asking prices on fresh cheese in Wisconsin are above a parity on New York. The demand here is chiefly for fancy held stock. Fresh make is rather quiet, although asking prices are fairly well sustained. Fancy whole milk State flats, held, that grade fancy to special are bringing from 23½ to 24½c, while average run held goods are bringing from 22 to 23c. Fancy to special fresh whole milk State flats are bringing from 22½ to 23c, while average run fresh goods are quoted at 22c. Some undergrades have been cleaning up as low as 18c, but these stocks have been fairly well cleaned up, and in general the market on these is now running as high as 21½c.

EGG PRICES LOWER

Nearby eggs are coming in more freely and as a result prices are a few cents below last week. The market in general is well supplied. Southern sections are sending in more fresh stock and even the West is sending in a little bit more than the trade really needs, in spite of the serious weather conditions out there. As a matter of fact, the market is in such a condition that there is some shading being done on western marks. Naturally these conditions are effecting our nearby trade and prices are bound to become easier under such conditions. The fanciest nearby whites are meeting a more or less of a quiet market, and some receivers report the lack of ability to effect a prompt clearance. Cases showing badly mixed sizes are moving very slowly and prices on these are trending easier. Eggs that are well packed, especially the mediums, are holding steady. It is very likely that from now on we are going to see a more critical egg market, allowing, of course, for climatic conditions that may create temporary changes.

POULTRY STILL WEAK

The live poultry market has not yet recovered from the serious set back it suffered following the declaration of the embargo. It is still quite a cripple. The fear still exists in those quarters where large quantities of live poultry enter the

retail trade that all poultry is diseased and that such is not fit for consumption. Just before Christmas express fowls which were in light supply met slow sale, although chickens were working out fairly well. Much in contrast to fowls, broilers were decidedly firm. Poultry other than chickens have met a good market. Express turkeys have been meeting a better market than at Thanksgiving time. Values went up to 55 and 60c. However, trade was slow at this point and prices were cut 5 cents

The Market at a Glance

The following are the prices on the New York Market, at which farm products of special interest to eastern farmers, sold on December 24.

Eggs, nearbys (cents per dozen)

Jersey hennessy whites, closely selected	69 to 70
Other hennessy whites, extras	67 to 68
Extra firsts	63 to 65
Firsts	60 to 62
Gathered, whites, first to extra firsts	60 to 64
Undergrades	57 to 59
Pullets	51 to 58
Hennery browns, extras	66 to 68
Gathered browns and mixed colors	51 to 63

Butter (cents per pound)

Creamery (salted) high score (93 score)	44½ to 45
Extra (92 score) c.c.	43½ to 44
Firsts (90-91 score)	41 to 43
Firsts (88-89 score)	38 to 40

Hay and Straw, large bales (per ton)

Timothy No. 2	25 to 26
Timothy No. 3	23 to 24
Timothy Sample	20 to 22
Fancy light clover mixed No. 2	23 to 24
Alfalfa, first cutting No. 2	26 to 27
Oat Straw No. 1	14 to 16

Beans (domestic, per lb.)

Marrow	9¼ to 10½
Pea	5½ to 6¼
Red Kidney	8¾ to 9¼
White Kidney	9 to 9½
Yellow Eyes	—

Live Poultry, via express (cents per lb.)

Fowls, colored fancy, heavy ..	25
Fowls, leghorns and poor ..	15
Chickens, colored fancy ..	—
Chickens, leghorns ..	—
Broilers, colored ..	45
Broilers, leghorns ..	40
Ducks, nearby ..	45
Ducks, Long Island ..	50
Turkeys ..	50 to 55

Live Stock (cents per lb.)

Calves, good to medium	10 to 13
Bulls, common to good	2½ to 4
Lambs, common to good	11½ to 15½
Sheep, common to good	5 to 6½
Hogs, Yorkers (200 lbs.)	8½ to 9¾

and at these latter figures the trade took hold much better and buying was stimulated.

In view of the condition in the live poultry market, we strongly advise shippers to write their commission houses first to find out the condition of the market and ask for instructions on making their shipments. It is rather risky to send on stock in a hit and miss fashion these days. The market is too uncertain to take chances.

NO CHANGE IN POTATOES

There is no change in the potato market. Prices remain the same as they were last week. Long Islands have been having slow movement at prices we reported, usually anywhere from \$2.25 to \$2.30 per 150 pound sack F. O. B. east end points. Bulk stock from Long Island is now moving quite as freely and prices are a slight bit easier and lower. States and Maines are meeting the same market they had last week. Maines are being delivered in New York City at prices ranging from \$2.00 to \$2.10 per 150 pound sack. States are still around \$1.65 to \$1.75.

BEAN VALUES SUSTAINED

Offerings in general have been well sustained on all varieties during the past week. Red kidneys are doing a little bit better. However, trade is dull and uninterested.

How Much Are You Really Worth?

(Continued from Page 3)

corners of the bins. For estimating the quantity of silage in a silo use capacity tables found in silo catalogues, farm account books or furnished by your farm bureau, or see December 13 issue of American Agriculturist.

After inventorying all stock, machinery, tools, and feed and supplies, list any other assets such as the value of winter grain in the ground, fall plowing,

liberty bonds, certificates of indebtedness, bills owed you, and cash.

After inventorying all resources next list the liabilities. These will include mortgages, notes and bills owed. Then make a summary of all the resources and liabilities as shown in the center of first page.

After you have taken your inventory this year, take a copy of your summary down to the bank and file it. Such a summary of your farm inventory will give the cashier of your bank a good picture of your farm business in a form with which he is familiar, and will help you to establish a better credit standing with your bank.

So before old 1924 gets out of sight over the hill, let's resolve to start the 1925 farm year off in a business like way by taking a farm inventory and filing a credit statement at the bank.

Note—The New York State College of Agriculture at Ithaca, N. Y., has a free publication entitled "How to take a Farm Inventory and make a Credit Statement" which will be sent free to any farmer in New York State requesting it, or can be obtained from your farm bureau. This bulletin contains full directions for taking a farm inventory and provides space for recording the 1925 and 1926 inventories and also contains two farm credit statements. Other state colleges can furnish similar inventory books.

Color Your Butter

"Dandelion Butter Color" Gives That Golden June Shade which Brings Top Prices

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade. "Dandelion Butter Color" is purely vegetable, harmless, and meets all State and

National food laws. Used for 50 years by all large creameries. Doesn't color butter-milk. Tasteless. Large bottles cost only 35 cents at drug or grocery stores. Write for free sample bottle.

New Jersey Farm News

Farm Bills Before The Legislature This Year

THE New Jersey Federation of County Boards of Agriculture is whipping into shape the legislative program authorized this season by the organized farm groups in New Jersey. A number of measures touching upon such agricultural problems of public interest as deer legislation, mutual insurance, labeling of nursery stock, licensing of milk dealers and sale of farm products by weight are being prepared.

Among the legislative measures, a bill to permit farmers to organize themselves into mutual insurance companies to write automobile liability insurance is a very general importance, according to a statement issued this week by the New Jersey Federation. A bill is now being drawn up for presentation during the early days of the 1925 Legislature, the purpose of which will be to amend the present state insurance laws to this end. Farmers in Central and Southern New Jersey have had such legislation in mind for several years and measures of similar intent have been well advanced in the State Legislature at previous sessions.

Indemnity for Deer Damage

The question of state indemnity for damage done by deer is another issue considered vital to the organized farm groups. The rigid protection which the State has given to deer, places these animals in the position of state awards, the farmers maintain, and as such the State is responsible for injury to orchards, market gardens or growing crops. The farmers further point out that the New Jersey Board of Fish and Game Commissioners have refused to look into the matter of damage after being invited to do so as guests of Atlantic County Board of Agriculture; it was hoped by the farmers that changes in existing statutes which would allow more rigid control of deer in Southern New Jersey counties might have been worked out as a result of this meeting. A measure now being prepared by the State Federation will ask for an appropriation to permit reimbursement of farmers for deer damage. As pointed out by the farm groups this will cause the Fish and Game Commissioners and

To Regulate Sale of Nursery Stock

Fruit growers in Central New Jersey, uniting with public spirited citizens throughout the State will present a bill to the Legislature through the New Jersey Federation, asking for a law to regulate the sale of nursery stock. Serious loss has been reported in trees which have not come true to name, this applying not only to general orchard stock, but to trees used for ornamental or other purposes. Laws giving protection against loss from trees that are not of the variety for which they are sold, are on the statutes of several nearby states.

Among other matters upon which New Jersey farmers believe legislative action is needed, is an amendment to the present law providing for the bonding and licensing of all dealers in milk. A measure will be presented to the effect that the failure of a dealer to apply for a license is prime facie evidence of intent to defraud. Daylight Saving may again come up for airing in the legislature, if a measure now being drawn up is presented. Control of weeds along the highways through compulsory cutting of the weeds just prior to the maturity of the seeds is also being considered.

To Standardize Containers

The sale of farm products by weight along the lines of the law passed by the 1924 legislature and which went into effect last July, is heartily approved by the farmers. However, the Legislature may be asked to define the term 'standard containers' as it appears in the law, the farmers desiring that the Legislature define such containers to be those already listed in previous statutes as legal packages. This will make arbitrary rulings on the provisions of the law unnecessary. Some attention has been focused upon a revision of the trespass laws, to protect land owners more effectively against infringement upon their property rights.

Pennsylvania Grange and Farm News

OLIVER D. SCHOCK

AT the 52 annual convention of the Pennsylvania State Grange held recently at Reading, Phillip H. Dewey of Gaines, Tioga County, was elected Master, succeeding John G. McSparran of Lancaster County. Mr. McSparran declined reelection after serving most acceptably for the long and eventful term of ten years, which period has marked a most phenomenal gain in membership. Mr. McSparran's closing address was characteristic of his verile use of the English language in behalf of all that was intended to promote our agriculture resources.

The Grange took definite action for and against a number of bills to be introduced at the next session of the general assembly. It also entered protest against some of the prevailing conditions in the state and nation. This included strong opposition to the Child Labor Amendment to the Federal Constitution.

Other Officers Elected

In addition to the election of State Master Dewey, the following officers were elected; Overseer, R. N. Benjamin, Bradford; Lecturer, J. H. Light, Lebanon; steward, J. B. W. Stuff, Somerset; assistant steward, J. J. Cleand, Washington; chaplain, G. W. Hatch, Huntingdon; treasurer, Frank P. Willits, Delaware; secretary, Fred Brenckman, Carbon; gatekeeper, M. A. Spleen, Elk; ceres, Mrs. W. P. Caldwell, Allegheny; pomona, Mrs. Louise Taylor Rodgers,

Washington; flora, Mrs. C. C. Rankin, Chester; lady assistant steward, Jennie Cole, Northampton; executive committee, William Armstrong, Luzerne; finance committee, John Dale, Centre; Keystone Grange Exchange, W. R. Tucker, Crawford.

K. S. Bagshaw, Assemblyman—elected from Blair County, was elected master of the Blair County Pomona Grange at their annual meeting this fall.

Other Pennsylvania Notes

J. K. Gross, an old retired Pennsylvania railroad official residing in York, has adopted grape culture as a hobby and now has over 200 varieties growing in his vineyard.

Chestnut tree sprouts three years old and free from the evidence of the deadly chestnut tree blight, have been found in Berks County, creating hopes that a new era of chestnut timber may be established on the denuded Blue Mountains. Very few old trees survived.

One of the best farms in northern Berks County was advertised recently at a public sale but no bid has appeared. The scarcity of help even at a high cost is given as a reason for no interested buyers.

An increased activity in the Lancaster cattle market is prevailing, indicating that fattening steers has resumed the importance of former years, regardless of the high cost of corn.

A Friendly Neighbor the New York Central

You own property, pay taxes, engage in productive work and do your part in promoting the prosperity of your community. These are privileges and duties of good citizenship.

New York Central—"an artificial person created by the law"—and "an association of individuals acting together"—more than 120,000 in number—likewise owns property, pays taxes, engages in productive work and does its part in promoting the prosperity of thousands of communities.

New York Central, an institution engaged in the public service, strives to be a good citizen and a good neighbor.

It represents the cooperative effort of many thousands of workers and investors. New York Central Lines carry one-tenth of the rail-borne commerce of the nation; they pay more than \$100,000 a day in taxes; they distribute more than \$1,200,000 a day for wages and materials; they are making new capital outlays for improvements averaging \$50,000,000 a year.

New York Central is a builder of national prosperity, whose destiny is bound up with that of half the country.

Service Department

More Licensed and Bonded Commission Dealers

HERE is a list of commission merchants who have been licensed and bonded by the New York State Department of Farms and Markets. As we have said before when publishing other lists, we wish it understood that we do not stand responsible for the conduct of these firms, we are simply printing the list of the licensed and bonded merchants as they appear in the files of the state department.

It is always more satisfactory to write to a dealer before you make a shipment. Notice under the dealers dealing in nuts, honey, maple sugar, etc., some deal in only one commodity while others deal in several. It is only through correspondence that you will find out whether a man is in position to handle your produce. The same holds true with live stock. Some of the dealers only handle lambs, others handle beef, while some may handle several different kinds of produce. Again, if you are shipping lambs, calves or hogs, write first and have it thoroughly understood that your shipment will be accepted. Furthermore when you ship save all receipts of the express company or carrier in order that you will have evidence in case something goes amiss.

BONDS THAT BUILD UP THE FARMING BUSINESS

OVER 300,000 farmers have borrowed money on first mortgages through the twelve co-operative Federal Land Banks. Better terms and lower interest rates enable them to steadily reduce their indebtedness—put their farms on a paying basis.

Money for these Loans is secured through the issue of Federal Land Bank Bonds. In this way, the savings of thousands of investors, large and small, are gathered into the Banks to be distributed to those farmers who can use them profitably.

There is no safer investment than these Bonds. The Federal Land Banks operate under strict Government supervision and are managed by men long trained in banking methods and well acquainted with farm conditions. Every Bond is guaranteed jointly by all the twelve Federal Land Banks with combined capital and reserve exceeding \$50,000,000.

Federal Land Bank Bonds are tax-free, inheritance taxes only excepted. And interest received from them is free from all income taxes.

Money invested in Federal Land Bank Bonds earns a good rate of interest, unfailingly paid twice yearly. Price and current rate will be gladly quoted on request.

In case of need, Federal Land Bank Bonds can be turned into cash on short notice. Or, they can be used as security for a loan at your local bank.

A Federal Land Bank Bond may be purchased for as little as \$40 or \$100. Other denominations are: \$500, \$1,000, \$5,000 and \$10,000. Your choice of coupon or registered form. Delivered by registered mail; all correspondence confidential. Look for the words "The Federal Land Bank" appearing at the top of every Federal Land Bank Bond.

The Federal Land Banks are located at

Springfield, Mass.	St. Louis, Mo.	Louisville, Ky.	Columbia, S. C.
New Orleans, La.	Berkeley, Cal.	St. Paul, Minn.	Houston, Texas
Wichita, Kansas	Omaha, Nebr.	Baltimore, Md.	Spokane, Wash.

Write for Federal Farm Loan Board Circular No. 16 descriptive of these Bonds, addressing nearest Federal Land Bank or the Fiscal Agent.

When You Build a Poultry House

Here Are Some Pointers on Rafter Framing

By L. M. ROEHL

WHEN farmers desire to construct a poultry house, implement shed, milk house, or other farm structure, the cutting of the rafters is the part of the construction work which seems the most difficult. It is, however, a simple matter if one has a steel square and has in mind a few points concerning its use.

Before one can lay out the rafters for a building he must know the span of the structure and the pitch or rise of the roof. By span is meant the distance between the outside walls. By rise is meant the vertical distance from the level of the plate to the peak. Figure 1 shows a building with a 12 foot span and a 6 foot rise. If the rise of a roof is equal to half of the span, as is the roof in figure 1, it is called a half pitch roof. If the rise is one-third of the span it is called a one-third pitch roof. If the rise is one-fourth of the span it is called a quarter pitch, etc.

The run of a rafter is equal to one-half of the span. The rafters in figure 1 have a 6 foot run.

In laying out a rafter, the square is placed on the rafter as many times as there are feet in the run and once for

each foot of cave or overhand. Thus, in figure 1, there are 6 feet in the run and 1 foot of overhang, and the square is placed on the rafter 7 times.

Figure 2 shows the figures on the steel square which are used most usually for building roofs. The figure 12 on the blade is always used to represent the run, and a figure 4, 6, 8, 9 or 12 on the tongue of the square to represent the rise. If a person desires a fairly steep roof he may use the figures 12 and 12. If he desires a roof more nearly flat he may use 12 and 8 or 12 and 6. The dotted lines on figure 2 show the exact angle or pitch of roofs resulting if the figures indicated are used.

Some steel squares have a table stamped on them showing the length of rafter per foot of run. This is very handy for figuring the length of ma-

terial to get for the rafters of a building. The following table shows the length of rafter per foot of run for the pitches of roof most commonly used:

Pitch of roof	Run of rafter	Rise of rafter	Length of rafter per foot of run
1/2	12	12	16.97 or 17 inches
3/8	12	9	15 inches
1/3	12	8	14.42 inches
1/4	12	6	13.42 inches
1/6	12	4	12.65 inches

Since the rafter in figure 1 is for a 1/2 pitch roof the figure 12 and 12 on the square are used and the distance between these two figures is 16.97 inches. This is so near 17 inches that carpenters use 17 inches instead. This distance is required for every foot of run and overhang, which in this roof is 7 feet. The length of timber required then is 7x17 inches or 119 inches, which equals 9 or sulphates changing it back into active

as may be seen requires 12 foot pieces for rafters.

The rule is to lay the square on the rafter as many times as there are feet in the run and overhang. In figure 1 it will be 8 times. If the overhang is more than 1 foot the square is used once for the foot and again using such fraction of a foot as is desired. For example: if an 18 inch overhang were to be made instead of 12 inches as in figure 1, the run would be 7 and 1/2 feet and the figures 6 and 6 would be used for the added half foot.

If a shed type of hog or poultry house is being built, only half of a full roof is

used. Figure 3 shows such a roof. The span is too wide for the roof to be carried by single rafters and so posts and stringers need to be run lengthwise of the building at center. Poultry houses are usually built with rather low pitched roofs. In figure 3, 1/6 pitch is used. Referring to the above table it will be noted that 1/6 pitch calls for the use of figures 12 and 4 and the length of the rafter for each foot of run is 12.65 inches. The roof is built with a 1 foot overhang at both front and back, making a run of 22 feet for the rafters; 22 times 12.65 inches equals 23 feet and 2 inches. Thus it is evident that two 12 foot pieces are needed for each rafter and there will be sufficient lap over the center beam to make substantial construction.

Go Easy with Battery Boosters

DURING the past few years there has been placed on the market a large number of patent or supposedly secret formulae or preparations which it is claimed will recharge a wet battery—some claim instantly, thus doing away with the old slow 48-hour method. Naturally, situated as he often is at a distance from recharging outfits, it would be a fine thing for the farmer if true, and he could recharge a battery instantly as is claimed. Yet before trying it, let him carefully consider the following.

Scientific investigation demonstrates that when a storage battery has become discharged its electric pressure or voltage is reduced and that in this discharged condition the battery plates become coated with inactive material or sulphates, and the electrolyte or liquid content is greatly reduced in acid strength—low gravity; it is termed. Now this weakened electrolyte finds great difficulty in penetrating this coating of inactive material in order to get at the small amount of active material still on the plates. Science further proves that the addition of a strong sulphuric acid solution to the electrolyte will enable it to cut through the inactive coating on the plates, allowing it to get at and attack the remnant of active material still present. Which action thereby raises the voltage of the battery. However, as there is only a small amount of active material still left, the sulphuric acid added cannot maintain the increased voltage for any length of time, and it follows that while the strong acid may temporarily raise the voltage, in the end it only makes matters worse by increasing the amount of inactive material upon the plates.

Now in normal charging, the electric current breaks down the inactive material feet and 11 inches. This building, then,

material or lead oxide and sponge lead. During which process the sulphuric acid is released, going back into the electrolyte and raising its gravity. This is normal recharging and sulphuric acid unaided by the electric current cannot accomplish it.

Therefore, as analysis and tests of a number of these so-called battery charging solutions have proven that they mainly consist of varying proportions of sulphuric acid and water, nor are they electricified as is claimed, the alleged "charge" they impart to a discharged battery depending on the old trick of adding acid, it behooves us to beware. The process adds no additional electrical energy and its after effects are more than likely to be detrimental, since high acidity cuts down the useful life of a battery in direct proportion to the increase in quantity. High acid content tends to disintegration of the positive plates, mushy and gray negative plates, and rotted separators.

Follow the maker's instructions in caring for it, and unless a battery is nearly ready to throw away, don't "dope" it.—Ed. HENRY.

Order Chicks Early. The poultryman who desires chicks for next spring delivery should be looking around for a poultry breeder who sells chicks of good quality. Many a man is forced to go without chicks or to accept later hatched chicks, than desired because he has been too slow in placing his order. Place your order early and you will receive what you want.

BLUE HEN Colony Brooders

ARE LIFE ASSURANCE ON YOUR CHICK INVESTMENTS

Their constant, dependable care gives your chicks a better start by supplying them with warmed fresh air, perfectly-regulated, without danger of deadly floor drafts. Larger and heavier than other brooders—a 20% extra value—but quantity production due to their preference by experienced poultrymen makes possible the low prices shown.

\$21.00 500 chick capacity (delivered)
\$26.00 1000 chick capacity (delivered)

Canning Crop Growers Pay the Fiddler

(Continued from Page 5)

future. The causes which have resulted in the abandonment of this particular attempt at cooperative marketing, as I see them, are apparently chiefly four: (1) and primarily, failure of membership directors and officers to realize and seriously assume the responsibility for the big job they had undertaken; secondarily (2) failure to limit their functions to a bargaining agency as originally contemplated; (3) too rapid expansion without sound local development and (4) failure to charge and collect the cost of doing business and to "pay as you go."

Responsibility

Not until members look at their co-operatives as a part of their marketing equipment just as they do their plows and harrows as a part of their production equipment; not until elected directors accept their election as a responsible trusteeship of their neighbors' property, will the success of cooperatives be possible. In the case of the canning crops organization members seemed to have no active interest in their association's affairs. Nor did officers interest themselves sufficiently in what the manager was doing. Very few meetings were held. Practically the whole business was left to the manager. While much blame might be attached to him, it is the directors and officers and finally the membership who are responsible and who pay the bills. Not until repeated borrowings had to be authorized to cover uncollected expenses and losses did the directors finally wake up to the real situation. And similarly it has taken a request to remit fifty dollars as an assessment to cover expenses and losses to arouse the members to their responsibilities.

Moral: We don't buy cows and entrust their feeding and care to others without oversight and interest; why should we take a share in a cooperative enterprise and leave it entirely to others to look after?

Bargaining versus Merchandising

There is a vast difference between merely acting as the sales agent for members and undertaking to process and merchandise products of members. The one requires chiefly bargaining ability, knowledge of values and the backing of volume under contract, all of which the cooperation possessed to a degree. The other calls for large capital, knowledge, skill and experience in manufacturing and merchandising, none of which the cooperative was sufficiently possessed of. The principle of commodity marketing was violated by attempting to handle everything. It was the boast of the management that it would sell anything its members owned—not only peas for canning or market, tomatoes, sweet corn, beans, but apples, pears, cherries, plums and even veal calves. This scattered effort could never permanently succeed. That it did not result more disastrously was probably due to the small quantity of miscellaneous products really handled and to rather remarkable sales agility.

Wrong Emphasis

It is desirable to have large numbers of canning crops growers acting together. To have independent groups here and there is merely to increase the size of the competitive unit. There should also be correlation of effort with similar groups in other states. But the most important thing is a strong local unit. This, like the foundation of a house, ought to come first. But the visions of organizers often travel faster than their ability to materialize them. It is somehow easier to make an apparent big showing to get away with superficial organization on a large scale, where details escape careful scrutiny than where efforts are confined to definite localities. The organization force

available was not sufficient to develop strong locals and at the same time organize the whole state and correlate it with other states, as was attempted. As events have proved a state-wide organization and national cooperation is of little value when the organization is not sound and functioning at home.

Better to Pay as You Go

When the new State association was first organized, it inherited a debt of \$1,500 from the old federation which had incurred expenses but failed to collect its one per cent. This was a bad start. Ever since, "debt" has been the "middle name" of the association. Charges for its services were kept low (5%) to make a good showing, and failed to pay the cost of doing business. Organization expenses were all deferred, without any plan for subsequent annual amortization, an important omission. The expense simply piled up. When to these accumulated expenses were added heavy losses in inventory of cherries, tomatoes, and equipment, it is easy to see how a net deficit of \$43,000 was finally accumulated. Early in the year the directors levied an assessment on all old members (i. e., all except those who had joined the organization in 1924) of fifty dollars apiece. On this assessment about four hundred members had paid \$17,382.81 up to December 5, 1924. If all indebtedness is to be paid and a few groups of cherry and tomato growers reimbursed in part for their almost complete losses, the remaining thousand members must pay in \$50,000 more. It is to be hoped that this will be done. About one half this amount would pay creditors other than growers. A friendly suit has been filed and heard to enforce the contract, but the judge has not yet rendered decision. There is every reason to expect a favorable decision and the collection of all assessments.

What of the Future

To the meeting in Rochester on December 15 at which the condition of the State association was fully reported,

(Continued on Page 22)

Why Unadilla?

Because Unadilla Silos offer you more for your money.

They make good silage and keep it good. Their air-tight fitted staves defy frost and save the valuable juices. They're strong, durable, well-built of selected lumber. They last so long that if you divide their moderate first cost by the number of years they serve, the yearly cost is so low that it is all out of proportion to the profits you get from each year's perfectly kept succulent silage.

In addition, they're safe and convenient to use, and save you time and work.

This is the kind of silo you can get at

The Trouble Maker—By E. R. Eastman

CHAPTER XIV

JIM TAYLOR sat in the farm bureau office at Speedtown with the telephone receiver glued to his ear. It was a peaceful October Sunday afternoon, but the messages coming to Jim over the wire from all parts of the county had nothing to do with peace. They were the reports of any army in action. The milk war was on.

As Harry Bradley, the county agent, sat at his desk and listened to Jim at the telephone, he marvelled at the man's executive ability. So well had the work of organization in the county been done in the limited time that the machine was working smoothly in every community. The man who sat at the telephone calmly but surely directing that machine, made Bradley wonder to what heights Jim Taylor would have attained if his lot had been cast in a different field.

"Thomas Gray was right," he mused aloud. "There are a whole lot of men who might have been great leaders, but:

"Chill Penury repressed their noble rage,
And froze the genial current of the soul."

"What did you say?" asked Jim, who had ceased to telephone for a moment.

"Nothing. Just quoting poetry."

"Jingle" signalled the telephone bell again. While Jim turned to receive the report, Bradley went over to another desk and took down the extension to listen also.

"No milk went out of Richland today," someone was saying.

"Good," said Jim. "Hope you can do as well tomorrow."

"This station," reported someone else, "has fifty-three patrons. Forty-two stopped today, and most of the others have promised not to draw tomorrow."

"Did they all join the League?" asked Jim.

"More than half of them. What'll we do with them that keep on drawing?"

"Let them alone, except to talk to them. Remember, Pratt, any fighting or violence will do us more harm than good. By the way, what's your milk superintendent doing?"

"He's out talking his head off trying to get the boys to bring their milk back tomorrow morning."

"Do you know what he's saying to the farmers?"

"Oh, yes; he no sooner leaves a place than they call me up and begin to cuss him out. He's tellin' them that this strike can't last, that farmers won't stick together, that most of them will be coming back with their milk, and those that persist in staying out won't be taken back by the dealers."

"Better watch out, or he'll convince some of them. Why don't you get some help and follow right on the heels of the superintendent so as to give the boys some encouragement? Tell them that eight stations of the twenty-eight in the county did not get enough milk this morning to wet the bottom of their receiving tanks. Tell them not a single station got a full supply. Every one of our local committees has reported that they will all get less tomorrow. Tell them all we've got to do is sit tight for a few days and we'll have the dealers licked."

"All right, Taylor. We're with you. Keep us informed. I'll call again tomorrow."

FINALLY the telephone ceased to ring and Jim sat back in his chair.

"By thunder, Harry," he said, "this time we win. Every committee we appointed is working red hot. They got the word out to the farmers and most of them just forgot to deliver their milk this morning."

"Their little old forgetters were right on the job, weren't they?"

"The best of it is, a lot of those who were half-hearted came sneaking in with their milk this morning, and when they saw there were so few there to deliver, they either took their milk back home, or promised the picket committee they would not bring it tomorrow. By gosh, we've really got something started that's going to get somewhere at last!"

"That sounds pretty good, Jim, but better keep your feet on the ground, for this is only the first day. Wait until these plant superintendents begin to get next to farmers. They won't have any milk to take care of, so all they've got to do is get out and spread propaganda. Already Shepherd, the local man here, has circulated the story that you're being paid for stirring up all of this trouble. Says all of the League officers are getting rich and that farmers will have to pay the fiddler."

"Every League officer is a dairyman

there's few people left who really know how to make good butter. Butter making on the farms is a lost art and it's kind of too bad. Some of the home made butter I've bought in the store would drive a dog off a garbage wagon."

"That's so, and when all of this rotten home made butter is put on the market as a result of this strike, I can see how a lot of people are going to be driven to eating oleo."

"Yes, you're right," said Bradley. "But after all, that's a detail. The big job is to win the strike, and I don't know whether you know it or not, but the worst part of that job is right here in Speedtown, and it centers around John Ball. He has a lot of influence, and he and his following delivered quite a lot of milk down at the local station this morning. Moreover, that man Shepherd, the plant superintendent, not only will not stop at anything but he's mighty clever. This morning old Ball sent Bill Mead down with their milk.

What Has Happened in the Story Thus Far

THE great milk strike is on! Jim Taylor, forgetting his own troubles in his enthusiasm for the cause, leads the fight in Speedtown. Jim speaks at a farmers' meeting, but is opposed from the floor by old Johnny Ball, father of Dorothy, Jim's childhood sweetheart. Dorothy is there, but for days has been coldly polite to Jim and gone everywhere with young Bradley, the young farm bureau agent. After a hot discussion which shows the great majority of the farmers to be with Jim, Johnny Ball stalks angrily out of the meeting. Dorothy stays to congratulate Jim but he avoids her, and she goes home to a family argument over the controversy. Later that night she slips out into the dark, finds her father smoking there reflectively, and they talk over many things. It is then that old Johnny Ball gives Jim the name of "Trouble Maker."

and is keeping his milk out just as he's asked others to do."

"Oh, of course, that's true, but the hard job is trying to keep farmers from believing those lies. The dealers will do anything, you know, even to bribing farmers with bonuses to get their milk started again. It won't take much either to discourage some of the boys, particularly after the enthusiasm has worn off, and after the women folks have tired themselves out with skimming milk and churning butter from the big dairies for a few days."

"I know it, Brad. We've got to organize our good men to work almost day and night at meetings and with individuals to keep their courage up. George Pratt, chairman of our committee at Honeyport, said that his dealer was already out with his car trying to get the farmers to come back with their milk tomorrow morning and telling them if they did not, the station would be closed and they would never have another market for their milk."

"Yeah," said Bradley, "that's old tactics; but it's very often successful. A good many wars have been lost because the enemy has been clever enough to make the opposing army lose its confidence in its leadership. Every time the farmers have tried to organize, the dealers have started the story that the leaders had sold out, and that was all that was necessary to bust up the movement."

"We'll answer that sort of thing with meetings. You've been working on this meeting schedule in the county. How have you got it fixed up?"

"Beginning tomorrow," said Bradley, "I've arranged for regular meetings two or three times a week in every community of this county."

"Good work, Brad. One of the things that we don't want to forget to do is to make all the arrangements we can to relieve the women folks of so much skimming, churning and butter making. Do you know, I've been surprised to find out that right here in this cow country,

That hot-headed young Dan Greene—I think you made a mistake in putting him on your picket committee—tried to argue with Bill as he was unloading his milk at the factory. Greene was rather radical, and you know how Bill is, so they hadn't said three words to each other before both got mad. Bill called you a lot of names."

"I'm used to that, Brad."

"Said though, that there wasn't much to you but wind when it came to a showdown. Told how he had licked you a couple of weeks ago in the cornfield."

"He did, did he?" smiled the other. "Bill reminds me of a fellow who tried to explain his questionable position in a fight by claiming that he fell down by accident and pulled the other fellow down on top of him!"

"Oh, Bill said among other things," continued Bradley, "that you were a grampus, whatever that is."

"He's heard that from old Johnny. I've often wondered what a grampus was when I heard Johnny use it. Now, I'm one, according to Bill, so I ought to know."

"Shepherd seemed to know what it was all right, for he lipped in and said Bill was right, that you were a menace to all legitimate business."

"If legitimate business means robbing the farmers, then I hope I am a menace to it."

"Shepherd said further that you ought to be in state's prison. This was too much for Greene, who is a loyal friend of yours, so he went a step farther and said if Taylor ought to be in state's prison most milk dealers, not excepting plant superintendents, are so rotten that they ought to be boiled in their own pasteurizers. Bill didn't understand what Greene meant but he couldn't stay out of the row, so he said to Greene, 'ye dang fool, milk dealers don't even have pastures.'"

"That sounds like Bill," laughed Jim. "What happened then?"

"Well, Shepherd got so mad he could

hardly talk, and ordered Greene off his property, and threatened to have him arrested. Whereupon Greene said that not only would he be glad to get off himself, but he'd see to it that every other farmer stayed off until the blankety-blank blink-blank dealers crawled on their bellies begging for milk."

"Make a nice picture doing that, wouldn't they?"

Bradley nodded and continued.

"Bill Mead again edged into the pleasant and genteel little conversation by telling Greene he would like to see him or Jim Taylor, or any other gosh-blamed trouble maker trying to stop him drawing milk, strike or no strike. Greene shook his first under Bill's nose, and told him if he brought any more scab milk during the strike he would be sorry. Then that started the fight, but the rest of the boys on the picket committee separated them and dragged Greene off of the premises."

"Now, that's too bad, isn't it, Brad? One of our men told me something of this row, too. We've got to watch that young Greene and the other fire-eaters to prevent any fighting. Nothing will hurt us more. Guess we'd better get out a circular letter warning every one of our committees against violence."

"Too bad about old Johnny, too," said Bradley. "He really is a decent old scout."

"Yes, I feel badly about the way Johnny and the other good farmers are mixed up in this. It's always the same way in civil war. And this milk fight is nothing more or less than war. Good men on both sides. All think they are right. Sometimes I think that neither side of any fight is right. The right is somewhere in the middle of the road."

"That's no way for you to talk now."

"Oh, I'm not weakening, Brad. I'm committed to this scrap. Probably the only way to find the middle of the road is for both sides to fight it out. But I sure do hate to see all this bitterness between old neighbors. The only bitterness that ought to exist should be toward the dealers—and maybe not so much against them when it comes right down to it, for they only took what we gave them, and that's probably what most of us would do in their place."

"There's Dorothy, too," said Bradley. "Sensitive girl with a lot of pride and all this talk about her father must hurt like the dickens."

"Expect it does, but she sides in with her father."

"What else can she do? What kind of a girl would you think she was if she didn't stand up for her own father? I like her all the better for it."

"Of course, you're right, Brad."

"How do you think the women folks are going to stand by in this strike?"

"Women folks always stand by," said Jim. "You can always count on them in any pinch. Generally have the worst of it, too. When men go to war there is the excitement, the pomp and the glory for them, but for the women folks who stay at home, and keep the families together, there is dull, hard labor, loneliness, and heart-breaking war."

"That's so. For instance, look how loyal Dorothy is. By George, there's a girl in a million! What couldn't a fellow do if he had a wife like her!"

Little did Bradley realize as he looked at his friend's face, controlled by an effort of will, what those words meant to him. Again Jim went through all the tortures of that night when he had imagined Bradley making love to Dorothy. Again he saw the other man's arms around her, his lips on hers, while she responded to his caresses.

But in a moment Jim had put it be

(Continued on Page 20)

Amusing Children On Stormy Days

Keep Them Busy With Toys Kept For Indoor Play

IT ALL depends on the mother whether the gloomy, stormy days that the children have to spend indoors are happy days. If mother is overtired, she is liable to be nervous and irritable and her mood will be reflected in her children's actions, making them spend the whole day fretting and quarreling. Therefore, on the occasional stormy days of winter, when the children have to play inside, do not worry too much about the appearance of the house, but try to leave the tasks that require strict attention until some day when there will be fewer interruptions.

As for the children, the secret of keeping them happy is to keep them busy,—first helping mother do some of the household tasks that they have already learned to do well, then being carefully taught to do some new task that may be proudly exhibited later to Daddy. If there are lessons to be studied or music to be practiced that should be done early, too. The work will go much easier if mother promises to play tea-party or read a story when everything is in order and the housework finished.

"Dress-Up" Always Exciting

Then for the serious business of playing. Those who are so unfortunate as to lack space for special playroom will have to donate a corner of the kitchen or living-room, with a cupboard or bureau in which toys may be kept. There is never any question of what to play when there are several children in the family, for then

there are always all the glorious old games of "make-believe," such as going to school, weddings, church, picnics and parties to be played, with or without "dressing up." It is the poor little only child who says, "Mother, what shall I do now?"

A kiddie-car with trailer or a small wagon will provide many hours of amusement for the young children and they never tire of blocks, or cutting out and coloring pictures and paper-dolls. A home-made dollhouse made from a box in which all cut doors and windows is interesting to both boys and girls, for the boys feel it is not beneath masculine dignity to make the furniture, while the girls do the curtains, rugs and other decorating.

There is another kind of doll house that may be so enlarged and elaborated upon that it will last all the stormy days of the year. This is a large book, which may be made from brown wrapping paper, with a page allotted to each room in an ideal home, the furnishings to be cut from magazines and mail order catalogues and pasted in. A set of carpenter's tools should be provided for the boy or girl who likes to work with them. The making of bird houses and other simple things will lead to greater skill in making more difficult articles. A small scroll saw with which to cut out animals, furniture and puzzles is also an endless delight.

After the dinner dishes are washed, fill the sink with water, stopping the drain pipe with a sheet of paper, let the children put

on rubber aprons, roll up their sleeves and sail boats to their hearts' content.

Later in the afternoon do not forget the long nap that will do much to straighten out the tangles for both mother and the children.

Hold Back Some Toys

After the nap comes the hardest time of all to fill in, and there is probably so much work left for mother to finish that she cannot sit down and read aloud, as she would like to, so she must think of something entirely new for the children to do if possible. The wise mother is always prepared for any emergency and will have just the right suggestion stored away in her mind, or if the supply of ideas is exhausted she will produce a new book or child's magazine or resurrect some forgotten toy or produce some article from the five and ten cent store, such as crayons, modeling clay, soap bubble pipe, puzzle or toy balloons, all worth their weight in gold if they are only a surprise.

When father comes in to supper, he will be greeted with, "Oh, Daddy, we have had the best time today! We wish it would storm every day." After supper there is only time to listen to a bed-time story on the radio and for Daddy or Mother to read aloud a half hour or so. Then comes prayers and bedtime, and as mother comes from tucking the babies in bed, she will be followed with, "It's been a happy day, hasn't it mother?"—MRS. PAUL TOWNSEND.

American Agriculturist Puzzle No. 6

©AMERICAN AGRICULTURIST, INC.

DEFINITIONS OF PUZZLE 6

ACROSS

- 1 A second crop on many farms
- 2 A kind of grain
- 11 Male sheep
- 12 Destructive burrowing animals
- 13 Kind of a poem
- 14 Nine (numerals)
- 16 Prefix meaning "to"
- 17 To mix rapidly
- 20 At the very top
- 22 Abb. for saint
- 23 A small town
- 24 Sixth note of the scale
- 26 Tag
- 28 What spiders make
- 29 A grain
- 30 Principal feed for stock
- 31 Dried feed used for cattle
- 32 Beasts of burden
- 34 Lock of hair
- 36 Short for Edward
- 37 Back part of a boat
- 39 Baby's name for father
- 40 Abb. for half a quart
- 41 A large unsteady light
- 43 Theodore Roosevelt
- 45 Man's name
- 46 Sound made by sheep
- 47 What the hens produce
- 49 Forenoon
- 51 To drop off to sleep
- 52 Requests
- 53 Southwest
- 54 Kind of hay
- 55 Two letters which form the plural of some nouns

DID you have any trouble with the puzzle last week? If so, the answer, printed in the small diagram, will straighten out your difficulties.

The diagram this week is not one that will wreck your disposition. There are a few fairly hard words, but then, who wants a puzzle too easy? On the whole, this is a puzzle of moderate difficulty, and should not take a long time to solve.

The list gives definitions of every word included. You remember that the words must completely fill the white spaces and that they must read both across and down, corresponding to the definitions. Black spaces mark the beginning or the end of words. Each number indicates the start of a word, either across or down and some are on both lists.

Do You Know That--

Try cutting hot steamed brown bread or steamed pudding with a clean string; it avoids the usual soggy on the surface of the slices.

* * *

Take old dresses, coats, trousers and other woolen things, cut the best parts into blocks or triangles, sew together on machine, line with outing for comforts.

* * *

Save the white wrapping cords and crochet them into dish clothes,—fine to wash things that food has stuck to badly.—Lady L. Robbins.

* * *

Hunt up the old felt hats and make them into cute shoes for the baby to crawl in next winter.

DOWN

- 1 Weep
- 2 A southern state (abbr.)
- 3 Leave out
- 4 Printers' Measurement
- 5 Decay
- 6 Farmers keep them to produce honey
- 7 Like
- 8 A disease of animals from eating a certain plant
- 9 A man's name
- 10 Affirmative
- 15 Fourteen (numerals)
- 16 Consumed
- 17 Remains
- 18 Worn in noses of bulls
- 19 Similar to cloven
- 20 One who conducts business for another
- 21 Prayers
- 22 Used for bedding farmer's stock
- 25 Bottomless pit
- 27 Besieged
- 28 A grain crop
- 33 Man's nickname
- 35 Abb. for a thoroughfare
- 37 Warning
- 38 To give another a feast
- 40 A farm implement
- 41 Note of the scale
- 42 For example (abbr.)
- 44 Used to reap hay
- 45 Advertisements (abbr.)
- 46 Wager
- 48 Happy
- 50 Manuscripts (abbr.)

SOLUTION OF PUZZLE 6

Hear Music 1500 Mi. Away

Complete outfit—SAVE 50%.

Westingale Radios receive concerts from coast to coast with enough volume to fill your house with music. So simple that children operate as well as grown-ups. Few controls. Westingale are most efficient and powerful sets made. You save money buying direct from manufacturer. Only nationally known parts used.

Market Reports—Farm Talks

Stations in all parts of the country broadcast farm information several times daily. Money saved by up-to-date farm market reports more than pays for your radio set. Entertainment and amusement are on the air all the time. Your first cost is your last. You hear world's best artists FREE. Do not buy anything in radio until you have our latest booklet, sent on request. Tells all about various types radios. All sets in beautiful black walnut finish cabinets, at lowest prices.

hind him. He was in a fight in which such things had no place, and his answer to the farm bureau manager came steady, calm and determined.

"Dorothy is fine," he said. "What do you think I ought to say at our local meeting tomorrow?"

"Can't anyone tell you what to say in a speech on this milk business, Jim. You certainly mesmerized that crowd the other day. Think Dorothy will come out to the meeting tomorrow?"

"Don't know. Whom do you think we can get to take autos and see that every farmer comes?"

"Easy enough. I'll take on that job, so you don't have to worry about it. Now do you suppose old Johnny would forbid Dorothy from coming if she wanted to?"

"Wouldn't do him any good if he did. Dorothy would come anyway if she took it into her head to. Now let's get down to business and lay out the program for these meetings."

"In just a minute we will, Jim. But first I want to talk with you about something personal that I have very much on my mind. I want to get your advice. We can take a few minutes off, can't we? We've been working hard all day. Do you mind, Jim? I've just got to talk to somebody."

Bradley, looking out of the window to cover his embarrassment, did not see the strained look in Jim's eyes nor the momentary hardening of his mouth. He certainly would have been a surprised farm bureau man had he realized that Taylor was having difficulty in keeping himself from falling on the other and pounding him to pulp. Bradley heard only the casual reply.

"Go ahead, Brad. What's on your mind?"

"You remember what I told you—that night up at your place—before the fair?"

"Yes."

"Well, the night when we were coming home from the fair—I told Dorothy—that I loved her."

"Yes."

Bradley hesitated a long moment, wriggled around in his chair, looked out of the window, looked at the silent man across from him who was leaning his head on his arm on the desk.

"I thought that in all that traffic and dust of the folks going home from the fair—that it was no good place—to propose to a girl."

"Yes."

"So I turned the flivver into that old back road. Maybe you remember it. It goes up by that deserted Johnson place."

"Yes."

"Confound it, Jim, can't you say anything but 'yes,' 'yes'? You make it deucedly hard to tell you anything."

"What do you want me to say? I didn't ask you to spill all of this." and then after a pause, "sorry, old man. I'm a little tired, not quite myself tonight. Go ahead."

"Well, there isn't much more to tell. We stopped up there the other side of the Johnson place. It was nice and cool, and quiet, after the noise and heat. We sat there a few minutes in the car quietly."

Jim suddenly found that he was trembling. He gritted his teeth and held tight on the desk until he could control himself.

"I got talking about my work, and my plans—and what I wanted to do in life—you know I'm always planning how I can get a big salary. Don't want to have to stick around this dump all my life."

"Salary isn't everything," said Jim.

"Well finally—I blurted out something—about wanting to marry her, and—and—"

"Yes?" whispered Jim. Bradley looked at him and went on.

"And she—looked at me kind of funny for a moment—and then she burst out crying—said she didn't know—said she was all mixed up—and wouldn't I take her home. Then I started the engine and took her home. There wasn't much said after that. But confound it all, I'm all mixed up, too. Can't work; can't sleep; can't eat; don't like to admit any darn woman can interrupt my life so."

"Wouldn't darn her, if I were you," said Jim in sudden anger. Then more gently. "What are you telling me all this for?"

"Well, hang it all, I've got to tell somebody, and you're a good friend. Besides, you've known Dorothy all your life, been sort of a brother to her. Thought maybe you'd tell me what to do to get her."

"Brother!" said Jim under his breath. "What did you say?"

"Nothing. Go on."

"That's all. But Jim, I've just naturally got to have that girl. I'm thinking about her all of the time. Even the excitement of this milk strike doesn't get my mind off the subject. I never have gone with girls much, and I don't know anything about women, so I don't know what to do."

"No man does," interrupted Jim.

"Pretty soon," went on the other, "I'm going to walk right in and take her whether she wants me or not. Got an idea that most women like this cave-man stuff anyway. Think maybe I made a mistake in not taking her in my arms and petting her when she cried. Probably that's what she wanted. Maybe I ought not to have asked her when she was tired and excited from the fair. Tell me what to do, Jim."

"How in H— do I know?" said Jim.

The other looked at him in startled surprise.

"Why, Jim!"

"Sorry, Brad. My nerves seem to be raw, lately. But I can't advise you. Girls are queer. Hard to figure out. I don't understand Dorothy either."

Then he suddenly leaned forward in his chair and with white face set as hard as granite, looked Bradley squarely in the eye and said:

"There is one thing I want to remember. Don't you ever try anything rough on her, and if you get her, and aren't good to her, look out for me!"

Again Bradley looked at Jim in surprise at his threatening tone; then in his own self interest, he immediately forgot it.

"Anyway, she didn't turn me down," he said, standing up and throwing back his shoulders, "and I'm going to keep right on the job, don't you forget it."

"No, I won't forget it," said Jim, quietly, but with an inflection which made Bradley turn to look at him; but Jim was answering the telephone, and the county agent could not see his face.

(To be continued)

Taking Out the Tree

MAKE a little game of taking down the decorations and the tree. Let the children help with it; save all the "trimmings" for next year. Then set the tree out of doors and put food on it for the birds. The youngsters will enjoy watching them eat.

Next spring, when the snow is gone, take the tree and burn it with due ceremony, and see if the children are not better satisfied than if you did all the work yourself and dumped the tree out to be forgotten.—MABELLE ROBERT.

To make cold starch that will keep for several months, mix together half a pound of starch, a tablespoonful of turpentine, a teaspoonful of powdered borax, and three pints of boiled cold water.

Earning Premium Money

Prepare For Future Fairs Now

THE problem of earning money at home, is more serious for the country woman than for her sister in the city. Many country housewives do not have the "butter and egg money," or the proceeds of the garden patch.

But nearly all farmers and their families attend at least one county fair, and sometimes three or four of them. I can hear some of the busy ones exclaim, "I don't have time for fancy work," or "I don't know how to make any kind of needle-work." In reply, let me ask if you have ever noticed the amount awarded on such work? There is usually such a display of all fancy-work that the premiums are very small.

Observe, however, the premium given for good bread of all varieties, butter, maple syrup, honey, jellies, wines, fruit juices, canned goods, home made rugs, quilts, vegetables and the various ordinary every-day products of the country.

It is considerable work to prepare a collection from the garden but if the vegetables are nice ones you are apt to be well rewarded. Exhibits of any single kind of vegetables are attractive if unusual in size, quality or a new variety.

entered in large quantities. The less entries of a given article there are, the larger premium you are apt to receive. The unusual article receives much attention and a good premium.

Cottage cheese, other varieties of home-made cheese, marmalade, fruit butters, conserves, pickles, and relishes are other suggestions.

My daughter at eight years of age did beautiful work in cross stitch and for two years each piece of work was laid aside "to take to the fair." She was much gratified to hear the comments on her work, and to receive a small check for the amount of her premiums.

Do not expect awards on all of your exhibits and if you do not win success this year, it is no reason why you may not later on.

Some fairs make larger awards than others on certain products. Learn to discriminate as to what you exhibit and where.

Don't be a fraud, and carry the same rugs, quilts and needle-work year after year.

Some unusual exhibits in this section that I have noted included an exhibit of

Midwinter Patterns for the Family

All small boys want a truly mannish outfit with blouse and knickerbockers. No. 1807 cuts in sizes 4, 6, 8, 10 and 12 years, and for the 8 year old size takes 2 3/4 yards of 36 inch material. Pattern 12c.

THIS DRESS in tunic style has several variations which make it becoming to any figure and easy for the home dressmaker to make. The long, tight fitting sleeve is decidedly the correct thing and the smart flare cuff may be used or omitted as you may desire. No. 2193 cuts in sizes 16 years, 36, 38, 40, 42 and 44 inches bust measure, and in size 36, needs 4 3/4 yards of 40 inch material with 3/4 yard contrasting. Pattern 12c.

THINNING LINES! Many of us are on the look out for them! No. 2136 provides a most flattering outline for the stout figure. It has inverted pleats from shoulder to hem, a deep V-neck and roomy sleeves set into comfortable armholes. Altogether an ideal model for a plump person. No. 2136 cuts in sizes 36, 38, 40, 42, 44, 46 and 48 inches bust measure. Size 36 takes 3 3/4 yards of 42 inch material. Price 12c.

To Order: Write name, address, pattern numbers and sizes very clearly, enclose right amount in stamps (coins sent at your own risk) and mail to Pattern Dept., American Agriculturist, 461 Fourth Avenue, New York City.

Next Week: Our annual "Thrift Week" page of make-overs. Patterns for dresses, children's frocks, aprons, blouses, underclothes—all things that may be made from outgrown or partly worn garments worth saving. These patterns will show you how to save them! Wait till you have seen our suggestions for make-overs before you part with outdated or outworn garments.

At a recent fair a woman said to me, "I was awarded \$3 on my ducks." One male and two females were exhibited, and the tone of her voice indicated that she felt well repaid for her trouble.

Individual exhibits and collections of flowers, both wild and cultivated, in my own section of the country receive fine premiums.

An attractively arranged bouquet, basket or fancy piece of wild flowers, mosses and the wild berries from the wood, will often command a finer premium than an exhibit of cultivated flowers.

When filling the cans for winter use, set aside one carefully prepared can of each variety of berries, fruit and vegetables. To make a genuine success of exhibiting your products, commence early to make your plans and lay aside such articles as you intend for that purpose. The new rugs, home made quilts, etc., may earn you something before they are put to use.

Study the fairs that you attend, and plan to exhibit those things that are not

pepper plants loaded with the ripe peppers, a large box of everbearing strawberry plants with berries on them both ripe and green, and an exhibit of darning on black stockings by children.

If you do not receive an award on what you consider a good exhibit make an effort to discover the reason. Don't accuse the judge of favoritism. Standing near your exhibit and listening to the comments of the public is often an education to yourself.

Make a strong effort to help the exhibits at your fair and you will be sure to succeed.—Fannie Stafford.

Boil clothespins in salt water to prevent splitting.

Pins, safety and otherwise, needles, pennies, buttons, and so on are hard on the vacuum cleaner. The cleaner is one of your best friends, so treat it accordingly.

Canning Crop Growers Pay the Fiddler

were invited not only members, but representatives of other cooperatives and independent growers, "to decide for themselves whether or not there is a place in New York State for a cooperative bargaining association in canning crops." About 60 persons attended the meeting, representing eight of the best locals in the State association and the Faucher Brockport and South Shore— independent cooperatives and a few other growers.

On invitation Professor Thompson of Cornell addressed the meeting. He stated it as his belief that the State association has been worth all it has cost anyone. He supported this view by pointing out that it made possible the valuable cost of production and cultural studies recently published and that nearly a million dollars was put in growers pockets in 1920 largely through this organized effort. He also showed

that there are on an average nearly 60,000 acres of canning crops grown annually in the State, approximating 150,000 tons worth more than \$4,000,000. If contracting this tonnage costs the canners two dollars an acre, as it is said to do, then here is a \$120,000 opportunity for a collective bargaining organization. One tenth of the acreage would support a good organization.

But growers are disheartened with their experience and prevailing sentiment is for paying up and forgetting it. Still, when a vote was called for, out of thirty-five growers present thirteen voted in favor of a bargaining association, while only eight definitely expressed themselves as against it. A committee of ten, representing the State association of South Shore, the Faucher and the Brockport associations and the independent growers with two members each was appointed. This committee meets at Rochester December 22, 1922.

If its members are open minded and don't try to force any preconceived plan, but weigh all experiences carefully, a strong bargaining group may yet be formed which will capitalize the experience already gained so that it may not be entirely lost.—M. C. Burritt.

Pipe for Water Supply

I wish to lay a line of pipe from springs on my farm to supply water to house and barn, distance 2400 ft., fall 30 ft. Level was made by civil engineer. There are a few gaps where water must push up grade. I will use 1½ inch pipe, which will easily flow full, except during a few short periods when the supply would not exceed 1 inch pipe. Would it be dependable to give satisfactory service when less water runs through pipe?—E. R. D., Pottstown, Pa.

If the general tendency of your whole pipe line is downward, and if at no point is the pipe line higher than the source of the water itself, then there ought to be no question in maintaining a steady flow of water through the pipe. Especially is this true where you are using a pipe of the size which you mention. However, it will be desirable to make the installation very carefully so that none of the pipe joints leak, as a leakage might cause trouble, though it would not necessarily result in stoppage of flow. If part of the pipe line were higher than the origin, and it were operated on a siphonage basis, then any leakage in the pipe would very quickly break the flow of the siphon. The quantity of water flowing through the pipe would not make any particular difference in its steadiness of flow.

Mare Discharges From Mouth

Would you kindly tell me what is the trouble with my mare. She has an extremely heavy discharge from the mouth amounting in total some times to a pailful in 24 hours. My veterinary tells me that it is from her stomach.—C. E. B.

IT IS impossible for the saliva to come from the stomach. The natural reaction and the arrangement of the various organs make this impossible. There is a valve-like organ at the entrance of the stomach which checks any action of this nature. From the description you give, it is quite apparent that there is a foreign substance in the animal's mouth or it is suffering with a bad tooth. A close examination of the mouth and teeth will undoubtedly reveal the cause of the difficulty.

Warts on Teats

Please let me know in your information paper what will take warts off the cow's teats.—A. R., Clearfield County, Pa.

WE would suggest that you use a stick of caustic and touch the wart every morning, or heat an iron and burn them off.

As a rule it takes quite a little while but if you keep at it, you will remove them with the caustic.

The good farmer is known by his reputation.

Chicken Chatter

Save The Poultry Manure—It Is Valuable

POULTRY manure is one of the most valuable fertilizers produced by farm animals. It is especially rich in nitrogen and therefore of particular value to the man who raises garden truck.

Poultry manure in its fresh state, contains between 50 and 60 per cent. of water, ½ to 1 per cent. of phosphoric acid and potash. When it is air dried it contains about 36 pounds of nitrogen, 24 pounds of phosphoric acid and 13 pounds of potash per ton. If, therefore 4 parts of dry poultry manure, by weight, are mixed with 1 part of acid phosphate, the mixture will be equivalent to about 1,000 pounds of a 3-8-1 fertilizer. In other words 400 pounds of acid phosphate mixed with 1600 pounds of dry manure is equivalent to ½ a ton of a fertilizer of the fore mentioned analysis. This is suitable for corn or almost any crop. The crop will naturally determine the method of application as well as the amount.

The plant food in poultry manure is in a readily-soluble form and its natural physical condition, concentration and quick action make it resemble commercial fertilizer. If it is to retain this fertility, poultry manure should be collected regularly and stored under proper conditions.

Special Care in Storing

Stored poultry manure demands, on account of the peculiarities of the substance, certain precautions on the part of the poultrymen. In the first place it should be allowed to dry well before it is stored in order that it will not ferment, which if allowed to continue, results in the loss of most of the valuable ammonia. The dry poultry manure may be mixed with ashes or sand and kept in a place that is dry. Piling poultry manure in doors where the rain will soak it, will result in the entire loss of the fertilizing constituents because they are so readily soluble. Sand is possibly the most easily available and certainly the cheapest material we can get to mix with it to boost up the balance of the fertilizing elements.

Often we hear of some persons suggesting that lime be used on the dropping boards and as a mixture with the manure. This practice is wrong. It is just the thing to complete the entire loss of the nitrogen, for the nitrates in poultry manure react with the calcium oxide in the lime to form ammonia, a gas which is lost. Lime, therefore, should never be mixed directly with the poultry manure as it tends to liberate the nitrogen.

Store in Dry Place

The best place to keep poultry manure is in a large box with stands on drain tiles to allow complete circulation around the storage, will insure dry mass, providing the mass inside the box contains sufficient sand or other drying material to prevent fermentation. It is a good idea not to have these storage boxes too large in order that the mass may not settle and become too solid. Wood, outside of concrete is much better as a storage material than metal containers. The chemicals in poultry manure react with the metal quite readily causing them to rust. Furthermore metal containers are pretty expensive.

As far as the dropping boards are concerned, we have always found that screened coal ashes make the most practical covering to keep the droppings dry and prevent their sticking to and cluttering up the boards.

After we clean the dropping boards and before we put on a new coat of ashes, we give the boards and the lower part of the walls just surrounding the boards a good dose of coal tar disinfectant and drained engine oil, if we have got it, to kill any of the mites that may be hiding in the cracks or crevices. It is bad business to let the manure pile up on the dropping boards under the roosts, because it soon begins to ferment and the fumes are not the best for the hens to inhale. If we

want to keep them healthy they must have good fresh air. When we inhale we are supposed to take in oxygen, not nitrogen.

Furnish Hens with the Wrappers

A FARMER friend of mine with a nice flock of purebred hens wondered why his flock was not shelling out eggs faster. He was getting some eggs, but the number was not at all commensurate with the amount of feed they consumed.

It needed but very little investigation to show the reason why the fowls were not laying as they should. They were given plenty of constituents necessary for the manufacture of albumen and yolk, but they lacked the material out of which to make the wrapper for the egg—the egg shell. So they were unable to deliver the goods, though more than willing to do so. A hen can't shell out the eggs without the shell-forming material.

In dry weather the flock was allowed to range over the farmyard. But there was also a little heap of coal ashes in one corner of the henhouse for the days when they were not allowed out. But the coal ashes and what they were able to pick up about the yard was not enough. A good supply of oyster shell remedied the matter and the egg yield soon began to show an increase.

This matter of oyster shell and grit is an essential that is all too often overlooked on many farms. It is taken for granted that the hens will pick up on the farmyard all they need. But this doesn't prove out. And it is far better to have grit and oyster shell before them, so they can have all they want when they want it. Because she has no teeth, the hen must have plenty of grit to grind the food in her gizzard, and the oyster shell furnishes the lime needed to make the egg shell.

W. C. MUILENBURG.

How I Increase Winter Egg Production

IN doing this I hatch my pullets as early as possible generally in April and as soon as convenient remove them to the house they are to occupy during the winter. Here they are fed and cared for as much by themselves as possible with the view of bringing them to producing eggs as early as possible. As a usual thing I have been able to have them begin laying in October at the latest.

Grain is the cheapest in the fall and eggs the highest and they can be produced at a little less cost. When the pullets begin to lay, they generally continue to do so, if conditions are favorable all through the winter. Whole grain is fed generously consisting of wheat, oats and corn, sometimes I add buckwheat. I do not however, depend on this alone.

Mash—Green Food—Shells

A dry mash consisting of equal parts ground oats, corn meal, wheat bran, wheat middlings and beef scrap. For green food I feed apples and cabbage. This makes an excellent feed and cannot be beat for rapidly growing pullets and laying hens. Oyster shells are kept continually before the hens and pullets. This with grit is purchased in 100 pound lots and placed where they are easily reached.

Lice and mites are not allowed to trespass on the nests and floors. The best preventative I have found is kerosene. This is painted on the nests and sides of house with a small paint brush. I also use motor oil on the perches and is almost worth its original cost for that purpose alone. I have never had the least sign of mites and lice since following this practice. In my last few years of poultry raising and egg production I find the pullets much better layers than yearlings or two year old hens.—Peter Wiley, New York.

B A B Y CHICKS

HILLPOT Quality STURDY PURE BRED HIGH-EGG-YIELD CHICKS

Take Their Parents' Health Along

No day-old chick can be healthier than its parents. We go to extremes in maintaining the physical welfare of our breeding flocks. Unrestricted acres of free range with plentiful pure, fresh water from running streams insure that natural sturdiness inherited by all our chicks. To this, add our first certainty of pure breeding from heavy-laying strains and you have the basis of their QUALITY and the PROFITS secured by those who buy them.

NO MONEY DOWN!

No C. O. D.—Nothing to Pay for Dishes on Arrival

Not a penny now. Just mail the coupon and Hartman, the Largest Home Furnishing Concern in the World, will send you this complete 110-piece Dinner Set, and with it, absolutely FREE, the handsome 7-piece Fish and Game Set. It's easy to get this set from Hartman. Nothing to pay for goods on arrival. No C. O. D. Use both sets 30 days on Free Trial, and if not satisfied send them back and we will pay transportation charges both ways. If you keep them, pay only for the Dinner Set—a little every month. Keep the 7-piece Fish and Game Set as a gift from Hartman. It is FREE. Only by seeing this splendid dinnerware can you appreciate its exquisite beauty and superior quality.

IMPORTANT

Hartman guarantees that every piece in this set is absolutely first quality—no "seconds." This is a standard or "open" pattern. Replacement pieces may be had of us for 3 years. Each piece wrapped in tissue paper. Excellent packing to prevent breakage. Shipped at once.

Every article in the Dinner Set has a clear, white, lustrous body, decorated with rich gold band edge, a mazarine blue follow band and two pure gold initials in Old English design, surrounded by graceful gold wreaths. All Handles Covered with Gold. Many expensive imported sets have not such elaborate decorations. Every piece guaranteed perfect.

110-Piece Colonial Initialed Blue and Gold Decorated DINNER SET

We will ship the Dinner Set complete, and with it the 7-piece Porcelain Fish and Game Set absolutely FREE. Use both sets 30 days on Free Trial. See these beautiful dishes on your table—show them to friends—use them—then make your decision. If not satisfied, send them back and we will pay transportation charges both ways. If you keep them, pay only for the 110-piece Dinner Set—a little every month. Pay nothing at any time for the 7-piece Fish and Game Set. It is FREE. Send the coupon—now.

Order No. 320GMA27. 110-Piece Dinner Set. Our Bargain Price, \$33.85. No Money Down. \$4 Monthly. The 7-Piece Fish and Game Set is FREE.

FREE Full Size, 7-Piece Porcelain Set for Fish or Game

This beautiful 7-piece set of handsome, durable porcelain comes to you absolutely FREE, when you order the 110-piece Dinner Set. Includes one 11 1/2-inch platter and six 7-inch plates, all with assorted tinted borders and attractive colored designs in center. This complete set costs you nothing either now or later.

The End of a Perfect Day

The Agricultural Outlook for 1925—By Gilbert Gusler

Your 1925 Garden

Real Gardeners Tell How They Beat The H. C. of L.

THERE is no better time to plan the garden than winter. On one of those bad days you are housed up with nothing to do, while you are sitting around the fire draw a plan of your garden. Give all the vegetables you want to raise a space. You can have this plan in your mind, but you will find it works better to have it on paper. It will save time when you get ready to plant.

Allow a liberal space for beans, bush lima and pole. It is very handy to have a few rows of potatoes in the garden even if the main patch is somewhere else. Peas, beets, parsnips and radishes can be planted very early. Plow the garden early with a turning plow that will go deep. Do not wait until all the corn land and all the other land on the farm is plowed before breaking up the garden.

The best fertilizer for the garden is a liberal

from weeds. Plant beans and then plant more beans. If the season is favorable it is easy to have fresh bush beans from harvest till frost.

Keep the Bean Patch Full

Plant three beans in a hill a foot apart or drill in the row. Many prefer the drill but the hills are easier to cultivate. Red Valentines do well either way. Plant every two weeks and cultivate shallow. It is possible to gather dry beans off the vine, plant them and raise another crop. When the vines begin to show a decline in bearing, plant a hill between the growing hills. When the old vines are done pull them up dry and burn them. The seed bed is thoroughly worked up and free from weeds.

There must be no clods and not too much trash. If the cultivation is to be done with a horse the rows should be extended across the garden. If a hand cultivator is to be employed, you can have the rows any length you want.

Stick or pole and lima beans should have a place in every garden. Nothing pays better for the time it takes to tend them. Cabbage both early and late, should be raised. This is easy but the fight is with the little green worm. A Paris Green spray will get him. Most of the failure in raising cabbage in the garden is due to crowding. Don't set too close if you are forced to cut down your number of plants. Cabbage can be transplanted very early. Cultivation should begin as soon as the plants revive from the effects of setting out. Here is where your plants raised in the house come in but sow more in the hot bed or under canvas.

A Hobby of Tomatoes

If the writer has a garden hobby it is tomatoes. Ten or twelve early plants will furnish all the early tomatoes needed. My kind of tomatoes are Stone and Ponderosa. The Stone is one of the nicest tomatoes for canning too. The Ponderosa is a large tomato with few seeds. There are other varieties just as good, but I am in the habit of raising these. My tomato patch is worked into the very best shape possible and hills are made at least three feet apart each way. The ground is stirred about all the time till the fruit sets on the vine, then it is a good idea to put on a straw mulch. This conserves moisture and keeps the fruit off the ground. A few vines are staked and pruned for table use but the pruned vines while bearing nice fruit do not hold out as long as the others.

One little row of strong red pepper will be enough but plant a goodly supply of sweet peppers. The whole family likes that, you know. Whatever space you have left put in sweet potatoes. These may follow sweet corn, peas and early beans. Try a few Bermudas, but don't forget the Nancy Hill. This is a medium size yellow potato and is a good keeper, canner and cannot be surpassed for drying. Can all surplus beets, beans and tomatoes. If you like greens, sow kale and turnips early.—C. C. Perry.

Preparing Soil for Frames

THE preparation of plant bed soil is one of the knotty problems, for the small gardener especially. I have never solved it entirely to my own satisfaction, but I have evolved a system that still leaves a great deal of room for improvement. I use two different methods of soil preparation, one for potting soil, and the other for the cold frames.

For potting soil, I pile in the "junk yard" any green vegetable waste that can be found. Lawn clippings, corn husks, weeds, grass, anything that will rot, are thrown on the pile green. Dry vegetable matter takes too much

time to decay. A little lime is spread over the heap from time to time, and it is turned a few times during the summer. The next spring, when potting soil is needed a great deal of the pile will go through a quarter inch sieve. Whatever will not is left to become the base of the next season's pile. Such a soil is almost pure humus. It does not need sand to make it an excellent potting soil, but I sometimes do make it go a little farther by adding good loam.

Loose Soil Allows Root Development.

Much of my land is used in the growing of plants, and most of the plants are either grown or hardened in cold frames. The soil of the frames does not need to be as loose as potting soil, but it must be loose enough to develop a good root system in the plant, and to permit digging with a maximum of the roots left on.

The cheapest place to prepare the soil is right where it is to be used. Carrying it around is expensive. One of the best ways I have found to prepare cold frame soil is by growing a strawberry bed each year where the frames are to go the year following. The year the berries are set, some early crop is grown between the rows to pay expenses, and the berries themselves usually pay well the second year. After the berries are off, a late crop of potatoes, early sweet corn, or kales which will occupy the land till frost, when the crop is removed. The frames are laid out and built, the land is spaded again and mulched till the following spring, when the mulch is removed and

A cellar full of the products of a good garden makes the farmer and his family truly independent.

coating of manure evenly spread in the fall or early winter. Do not wait too long about this job either as the manure should be well rotted before planting. The fall and winter rains and snow will leach the strength or plant foods into the soil and every plowing and harrowing will help to mix it thoroughly with the soil. Some day when you are not very busy, overhaul the garden fence and fix up a place for the hot bed.

Tomato and cabbage plants can be started early in the house. A small box of fertile soil will furnish all the real early plants needed on an ordinary farm. By the way I forgot to mention a very important fact in regard to your plans. Let your wife help and nine times out of every ten if you let her boss the garden you will have a good garden. A good garden is half a living and it has been said that the other half was a good cow, a few hens and a few fruit trees.

An Experience in Growing Peas

The first thing done in the garden line is sow a lettuce bed. Transplant if you want heads, but by far the largest amount of lettuce is used from the bed while tender. Peas will stand a whole lot of cold and to do their best should be planted early. Many people do not think peas pay for the trouble in handling. Well a number of years ago we tried an experiment in raising peas that taught me something. We had not raised any though we tried every year. It is immaterial what kind you raise. The bush peas will mature earlier but the larger ones will bear heavier and longer. But back to our experiment. Our vines would dry up after we got one small picking. I had heard that peas would not germinate if planted too deep.

The rows were laid off with a rather large shovel plow and when the seed was drilled in the bottom of this and covered deep, four or five inches, anyway I could not figure out how the plants would get out but they did and we gathered three crops from these vines, many of which were still in bloom when pulled up to make room for fall turnips. Beets, radish and parsnip do better in raised rows than in ridges. Pull in more soil as you cultivate. Just keep planting beets and radish every ten days and you will have fresh ones the whole season. Keep the surface of the soil cultivated and free

Do you like strawberries? Growing them is no harder than growing any other crop.

the sash placed on in February. By the time the frames are needed the frost is out and the land is dry and loose.

Hot Beds for Permanent Uses

There are a few frames that must be permanent. For these I make a few hotbeds each year, using two or three loads of manure, for starting early plants. After the plants are out of the beds, the spent manure is forked over, and a small quantity of loam mixed with it. It is turned once or twice more during the summer, and in late summer or early fall is spread on the frames three or four inches thick, and worked in to the depth of a spade. I have now an excellent soil for pansies. The plants are taken from the plant beds and set in the frames in November. They make flowers of the largest size the following spring.

If the frame is to be used for other plants, it is cropped with radish or lettuce in the fall, as the soil is too rich for the best plant production. My soil is ordinary corn land. Organic matter without sand is all that is needed to make it fit for plant growing. A few years ago I bought the top foot of an old cow yard from a new farmer who did not seem to know its value. My soil problem was settled for four years.—J. A. Umoselle, New Jersey.

The Agricultural Outlook For 1925

The Situation Promises to be at Least Some Better Than in Recent Years

SOME FARMERS experienced exhilarating prosperity in 1924 some had a decent average year and some dragged through another twelve dreary months of depression. This is about as far as one can go in an attempt to reduce the "condition of the farmer" to an epigram.

The average farmer took another step toward prosperity during the year. He received 50 to 100 dollars more for his year's efforts than in 1923. Even more important, the farm dollar, at present, has a nickel to a dime greater buying power than a year ago.

Farm income in 1924 is the largest since 1920 and the best balanced among the different groups of farmers for a still longer period. The wheat belt, which was a dark spot on the agricultural business map of a year ago has been transformed to a rosy tint. In general, the contrasts between returns from various types of farming are less pronounced than for several years. Agriculture is not one industry, but several. The onset of good or ill fortune is not the same in its different branches, so that the rewards of husbandry are never distributed with equality.

Half a Billion Dollars More

The total value of the output of agriculture in 1924, excluding crops fed to live stock, is probably \$500,000,000 to \$600,000,000 more than in 1923, when it was estimated by the Department of Agriculture at \$12,204,000,000. This means a gain of four or five per cent.

After allowing the same wages to the average farm operator for his labor as were paid to farm hands, his net income will be large enough to pay approximately 3.8 per cent on the present value of farm capital, estimated at 60 billion dollars. This is on the assumption that production costs were no higher than in 1923, whereas they may be a little higher than last year.

Of course, this is not an adequate return for either the labor or the capital of the farmer, so that he is still far from being the spoiled child of fortune. Nevertheless, the estimated return on capital compares with 3.1 per cent in each of the two preceding crop years on the same basis of calculation, 1.4 per cent three years ago and 0.6 per cent four years ago.

Farm Dollar Buys More

Prices of non-agricultural commodities in 1924 have averaged about 6 per cent lower than in 1923, so that the farm dollar will buy more goods. Farm machinery prices have recently gone through a mild slashing. Coal lumber and other building materials and house furnishings cost less than a year ago. Based on the prewar period, when, according to the common view, the farmer's dollar was worth 100 cents, its exchange value of non-agricul-

By GILBERT GUSLER

tural commodities in 1923 was only 78 cents. With farm prices on a higher level and other commodities on a lower level, the exchange value of farm products in 1924 will average about 82 cents. At the close of the year, it stands not far from 90 cents.

Farmers can face 1925 with optimism born of reason. The new year does not promise to usher in an era of boundless prosperity for

way to make an honest living", or "An honest way to make a hard living", whichever one chooses to call it.

Better Living Standard Coming

For all that, farmers will be able to enjoy more of the good things of life than for several years. Their gradual comeback since 1921 has represented a period of liquidation of pressing bank debts. More of the income in 1925 will be left for long neglected repairs, new buildings and other improvements to the farm-buildings and other improvements to the farmstead, new machinery, and for raising the standard of farm living. The different branches of agriculture will be closer to a common level of profit than for several years, because of the adjustments that have been, or are being made between various enterprises on the farm. A notable decline in the number of farm bankruptcies is one of the strong probabilities of the year.

Grounds for the conclusion that 1925 will increase the measure of farm prosperity may be summarized as follows:

1. A larger physical volume of foods and clothing will be required for domestic consumption than in 1924.

2. While there will be some variation, as between different products, foreign demand for our surpluses, and foreign ability to pay for them will be greater than in 1924.

3. Domestic production of foods and fibers will be but little, if any greater than in 1924.

4. While the price of farm machinery, and some other commodities which farmers buy, will be lower, production costs will not be much different from 1924 and they may average slightly higher for the year as a whole.

General Business to Prosper

Opinions as to the immediate future of business are probably more unanimous than for several years. Practically all the business analysts, financiers and industrial leaders are of the opinion that expanding activity will be the rule in the first half of 1925. Some business men go so far as to say that the next two years will be one of the greatest boom periods known to this generation.

The Brookmire Service looks for "improving business conditions through at least the first half of 1925. Reduced stocks of goods, volume of distribution greater than current production, easy credit conditions, increased farm purchasing-power, improved foreign conditions, reflected in heavier exports, and a more optimistic feeling toward future business are some of the factors that make the outlook for the next six months one of continued expansion in activity and prices".

(Continued on page 31)

GAINS EXCEED LOSSES IN 1924

agriculture, but the rewards of farming have a good chance of exceeding those in 1924. This is a continuation of the trend of the last few years, as agricultural output has gained in value each consecutive year since 1921. In 1924, the increase over the low year amounted to 30 per cent.

It would take monumental forces, not now visible on the horizon, to make 1925 into a boom year agriculturally. A stronger tincture of doubt may be advisable in making up the forecast of better days immediately ahead, than was necessary two years ago. At that time, farmers were at a much greater disadvantage compared with industry than they are now.

The problems growing out of high wages, interest on heavy real estate debt, high taxes, high costs for supplies, and high freight rates will continue. The farmer will still find himself working from "kin to kant" for a smaller wage than most skilled laborers receive for a short work day. Farming will still be "A hard

Every Voter Should Pay Taxes

"Every family should be a taxpayer, especially every one who is a voter. It would open the eyes of many if they were taxed when they voted for improvement so that it affected themselves as well as others. I think your tax suggestions are on the right track."—J. J. H., Webster, New York.

Another subscriber writes as follows:

"Conditions will not change materially in my estimation until every man is taxed according to his income. Labor today puts across many of the appropriation bills that come up because the majority are not affected much through taxation by the passage of these bills."—V. J. W., Union Springs, New York.

WE believe the writers of these letters have put their fingers on one remedy for the present tax situation. In California there is a five dollar poll tax on every voter, excepting those who pay heavy taxes on personal incomes and private property. If there were such a law in every State, there would be less demand all of the time for the government to do things. Our forefathers fought for the proposition that there should be no taxation without representation. We believe that the principles of justice also demand that there shall be no representation without taxation.

The League Strengthens Its Position

THE recent purchase of the two large milk companies, the Clover Farms and the Evans Dairy, by the Dairymen's League Cooperative Association should, if accepted in proper spirit by milk producers, greatly strengthen the situation of all milk farmers in this section. These new plants handle, for the most part, Class One Milk.

The growing number of milk plants which the League owns plus the large number of other farmer owned plants in this territory are, even with the mistakes that may be made, the best insurance all of our dairymen have.

There is a lot of dissatisfaction with the Dairymen's League Cooperative Association, both in and out of the organization. There is also a lot of loyalty on the part of the majority of the farmers who belong. Big problems are still to be worked out; bad mistakes have been made and will be made for there is no road that has been blazed ahead for the cooperative movement. AMERICAN AGRICULTURIST reserves the right to discuss these mistakes in the future, for we believe farmers have the right to full information and to both sides of this problem which so vitally affects their interests.

But at the same time, let not anybody forget

that fair criticism gives full credit where credit is due. We do not think it is fair or right, or to the best interests of the farmers either in or out of the Association to "knock" the League all of the time. AFTER ALL, LET US NOT FORGET THAT THIS ORGANIZATION IS A FARM INSTITUTION OWNED BY THE FARMERS AND IN WHICH THEY HAVE THE IMMENSE INVESTMENT OF TWELVE AND A HALF MILLION DOLLARS! No one can say in fairness either that this investment from a financial standpoint has not been well managed. The milk plants owned by the League have been properly depreciated to such an extent that this property plus the liquid assets of the Association would pay par value on every certificate of indebtedness that has been issued. There are few business concerns that have ever been able to do this with their new commercial paper.

Farmers themselves cannot afford to jeopardize this investment. It represents a saving which they have paid for on the instalment plan, a saving which they might not otherwise have, and their ownership of these plants is at least some protection of their milk market. When we as farmers come to see that this property which we own together must have the same good attention and management that we give our horses, cattle and real estate, which we own individually, then we will make a great step forward in cooperative work.

Marketing milk and other farm products through cooperation is the most important problem before American farmers. The principle of organization and its need for marketing purposes have been accepted by practically everyone. Many of those who find fault with all of the existing organizations try to start new organizations based on their own ideas.

Nearly all of us then believe in cooperation. Our bitter differences are over the means and methods. These must be worked out at the cost of expense, trouble and some failures. The problem does not necessarily have to be worked out by all of us in one association. Maybe it is a good thing to have two or three organizations experimenting along different lines in cooperation at the same time, for each method has its advantages and eventually out of them all there will come a combination of methods best suited for handling milk and to the conditions under which it must be sold.

But what is absurd, unnecessary and dangerous to our interests is the quarreling and bitterness of spirit that seem to prevail among the dairy farmers of this section while we are in this experimental stage of trying to find the best way to cooperate. SUCH QUARRELING AMONG FARMERS IS BAD BUSINESS! AMERICAN AGRICULTURIST has constantly deplored these foolish differences among producers, for which every group seems to be about equally to blame. Do not forget either that this dissension and disagreement among dairy farmers is exactly what many of the dealers want, for well they know that when farmers present a united front the middlemen can no longer control the price of milk to dairymen. Do you for a moment think that this friendliness and the better prices they pay some producers is because they love you? Or is it because they want disagreement among dairymen to continue until organizations are wrecked?

Some of us have evidently forgotten the bitter struggle which existed for more than half a century between the milk farmers and the buyers over the conditions and prices under which milk was sold. The milk buyers have been clever enough of late to pose as our friends and to turn this bitterness back among our own neighbors. Perhaps it is a good thing for us to remember occasionally those old days when farmers' representatives tried to negotiate with the dealers and were told to "go home and slop the hogs." Let us remember, too, those days when we signed on the dealer's dotted line, a milk contract that we had no part in the making.

Yes, it is very noticeable in these days of or-

ganization, even though these organizations may not be ideal ones, that the buyers of milk have adopted a different and a friendlier attitude toward all producers. But make so mistake. Human nature is the same yesterday, today and tomorrow. Should these organizations disappear, the arrogant attitude of the middlemen would come back and the individual producer would again sign on the dealer's dotted line or have no market for his milk.

Have we forgotten that only \$1.65 was offered by the dealers for fall milk in 1916? But this price was not acceptable to our dairymen, and because all producers presented a UNITED FRONT, the dealers were finally forced to pay \$2.15. Corresponding differences were also paid for the months succeeding October.

There are those who complain of lack of results from the milk organizations. Of course these results have of late been disappointingly small. Perhaps we have expected too much. The best organization can never make a success of a poor farmer. History shows that all progress has been won only a step at a time by struggle and sacrifice. This progress would have been greater if all of the dairymen were pulling together now as they did in 1916 and 1919, either in one organization or by the organizations themselves cooperating.

What better resolution can all of us make at this beginning of a new year and another quarter century than that we shall put our heads and our shoulders together, no matter what organization we may be in, to lay aside dissatisfaction and bitterness among ourselves in order to work out a step at a time the best principles of cooperation for better conditions in the dairy industry?

Help the Census

THE agricultural census which is now being taken by the United States Department of Agriculture in cooperation with the State Departments is a good thing. Nothing gets out of date so quickly as farm statistics, but without these statistics and the information which can be obtained only through a census farmers cannot be kept informed as to what is taking place in their own business and as to how to adjust their business in accordance with market demand.

Therefore, we suggest to our people that good cooperation be given to the census enumerators when they come to your home. These men are under oath to keep individual results confidential so you need not fear to give them the data and information for which they ask.

Eastman's Chestnuts

SOMETIMES I have wondered if our general disgust with lazy people is not founded on envy, for I am not sure whether it is a blessing or a curse to be constitutionally so made up as to be able to avoid without conscience almost anything in the nature of work.

In the serial story, "The Trouble Maker", now running in this paper, Bill Mead, the hired man, uses an old country joke when he claims that Johnny Ball is pitching hay so slowly from the ground on to the wagon that one has to use a fence post as a sight to see whether he moves or not!

But about the best story of a lazy man I have heard in a long time is the one where the wife got disgusted with her lazy husband and thinking maybe he was sick, took him to the doctor. The physician punched and poked him all over, and finally said:

"Well, I can't find anything the matter with you. What ails you anyway?"

"I dunno, doc," he replied, "I sleep all right—I eat all right—and I drink all right—BUT WHEN I SEE ANY WORK I JUST NATURALLY TREMBLE ALL OVER!"

"The art of reading is to read in such a way that with the utmost economy of time one can secure the richest of results."—HAMILTON WRIGHT MABIE.

Local Taxes Cause Most of Your Trouble

Local Officers Must Be Made to Economize The Way Farmers Have To.

THE CHIEF TAX troubles are local. National taxes affect farmers of course, but their effect is indirect. State taxes are a larger burden than the national but both the national and the State taxes taken together are only a small percentage of the farmers' total tax bill. Owing to the inauguration of the budget system, and to the determination of President Coolidge and the national government to reduce taxes, real savings are being effected at Washington.

The States too are beginning to give serious attention to the need of more economical government which will result in calling on the taxpayers for less money. Last year Governor Smith and the legislature of New York State reduced the direct State tax one half mill and other savings and adjustments were made leading toward economy in State government.

Stop The Spending Craze

These savings, both National and State, will be continued, but the farmer will get very little real help until he sets his foot down on the spending craze that is still going merrily on right in the localities in which he lives. IT IS TIME THAT YOU DEMAND A REDUCTION IN TAXES FROM YOUR COUNTY, TOWN AND VILLAGE OFFICERS. If they will not heed you, kick them out and put in somebody who will run your government in the same way you are now obliged to run your farm.

The National Grange is the authority for the statement that county expenses on the average increased more than 140 per cent between 1912 and 1921. The increase in county government in that period in New York State was from 19 to 38½ millions. Town and district taxes were worse still. In New York State these taxes grew from 62¼ millions in 1912 to 139 1-3 millions in 1921. Since 1921 the situation has grown steadily worse. In the State of Connecticut, county taxes grew from \$755,000 in 1921 to \$818,000 in 1922, and the municipal and township taxes from approximately \$33,500,000 to over \$38,000,000.

What Shall Be Done About It?

President Coolidge called the country's attention to this danger from local taxes in his recent budget message to Congress, but every farmer knows what this situation is. What he wants to know is what is going to be done about it.

We have already suggested that the first thing to do is to pay enough attention to the local elections to get the right kind of men in office. IN OUR SYSTEM OF GOVERNMENT, IT IS MORE IMPORTANT TO GET A GOOD SUPERVISOR THAN IT IS TO GET A GOVERNOR OR PRESIDENT. Yet there is always a lot of noise in the State and national elections while comparatively little attention is paid to the nomination and election of local officers.

The second remedy is the insistence on the part of the taxpayer for a budget showing what the coming year's expenses are going to be and a detailed statement with the tax bill showing just what the public moneys were spent for.

Let Us Know Where The Money Goes

This is not an unreasonable demand. The New York City taxpayer gets such a statement, and here is a letter from one of our subscribers showing that this information is furnished in Canada.

"I lived in Ontario, Canada, and several days before our taxes were due, every taxpayer had a detailed list of his taxes mailed him or her, giving an account of every item for dominion, provincial and local taxes. Perhaps it did no good, but we certainly had an idea where our money went to and how it was spent.

"Quite a difference here. About all we know

den of taxation upon farm property. In some cases the demand for reduced taxation is satisfied by an unwise economy.

"Would it not be worthwhile to incorporate into your plan for reduced taxation a scheme for eliminating unwise and unnecessary expenditures? Our present tax collecting machinery is exceedingly cumbersome, inadequate, and expensive. The taxes upon my farm run between two and three hundred dollars a year. I HAVE TO PAY A COLLECTOR EVERY YEAR FROM TWO TO THREE DOLLARS FOR THE PRIVILEGE OF WRITING THE CHECK TO COVER THESE TAXES. STATE AND COUNTY TAXES COULD BE AS EASILY AND MUCH MORE ECONOMICALLY COLLECTED THROUGH THE COUNTY TREASURER OR SOME SIMILAR OFFICIAL AND THUS SAVE A LARGE PART, IF NOT ALL, OF THE ONE PERCENT COLLECTOR'S FEE. Of course, this is only a start but that much can be accomplished without any reductions in benefits received."—W. I. M., Ithaca, N. Y.

The other one says:

"Your editorial on page 408 concerning school tax notice and taxes is correct. It seems to me that land, school and dog tax collectors are all superfluous. The taxes might better be all on one bill and rates published with budget information, and remittance made direct to county treasurer for 60 days, no fee, after 60 days, 5% penalty. The county treasurer could send vouchers to district treasurer for teachers' salaries and other expenditures. We need more publicity of receipts and expenses. Some school trustees do not even furnish a report to the district inhabitants."—J. H. W., Cherry Valley, New York.

Do You Care Enough To Write?

Every mail is bringing letters which will be helpful to us in fighting your battle for reduced taxes. But it would seem as if we ought to hear from every subscriber. We ought to get 100,000 letters. We cannot say that our people do not support us because the hundreds of letters which we do receive show their great interest in this important problem. But we do say that if a man or woman is not interested enough to be willing to write a letter, it is doubtful if he has any kick coming when he has to pay his high taxes. This sentiment is well expressed by one of our people who writes as follows. Read it and then drop us a line that we can use to show officials that you are back of us in the demand for reduction of government expenses.

"Have just been reading 'Farm Taxes Must Come Down'. I think every subscriber who is a farm owner will agree with that, but whether many will take the trouble to write you is a question, for it seems to be human nature to be careless and neglectful about the things in which they should be most vitally interested. Not only for the welfare of the farmer, must farm taxes come down, but I believe that the very life of the nation depends upon it."—J. E. L., Lodi, New York.

Worse Than Stated

H. C. McKENZIE, tax expert of the New York Federation of Farm Bureaus, calls attention to an error in one of our statements on taxes in the November 22nd issue. Our statement "in the nine years from 1912 to 1921, taxes increased \$280,000,000, or more than 140 per cent," referred to State taxes.

In 1913, the total tax bill of the country was \$2,094,000,000 and in 1922, it was \$7,061,000,000 showing an increase in these years of over \$5,000,000,000.

We did not get our first figures big enough. The situation is much worse than we stated.

Copyright 1924, New York Tribune

THE INCORRIGIBLE FLIRT

Darling, in the New York Tribune

is how much our school tax is for our district school. Anything you can do along the lines you suggested has my hearty support and approval. Keep at the work."—J. H., Cazenovia, New York.

No one thing will keep local officers within bounds so well as the knowledge that they will have to go to the voters with a statement showing just how and why they spent the voters' money. A few taxpayers' meetings, followed by a resolution to your Board of Supervisors and to your Town Boards, together with a lot of letters from taxpayers asking for this tax publicity in the way of a budget and a statement with the tax bill would show your local officers that you mean business in your tax reduction demands.

Why Pay A Collector?

Another suggestion that would help the local tax situation is to improve the tax collecting plan. This suggestion has come from two of our subscribers. One of them writes as follows:

"I believe that every thinking person is interested in the economical operation of state, county and local governments and in reducing the bur-

Getting Rid of Quack

And Questions About the Corn Crop

The Crop Department of AMERICAN AGRICULTURIST is often asked for the best method of exterminating quack grass. Editor Eastman recently said in one of his chestnuts that about the best way to get rid of it was to die and leave it, and farmers who have wrestled with it for a lifetime will agree that there is not much of any better remedy than this one. However, it can be at least controlled if right methods are used. One of our readers, Mr. Rich Lucas, tells his experience with quack grass as follows:

Quack grass, when once it takes a field is very hard to exterminate, so by all means it is best to keep it out of the tillable land and not let it get a start. It is very much easier to get right after it as soon as it begins to show in any field and keep working it out, and keep in check, than it is to let it get a hold and then try to eliminate it.

If, however, this grass already has a start on your farm, it can only be gotten rid of by a lot of constant and consistent work.

Spring Tooth Harrow for Exterminating Quack Grass

There are several ways that one may go after this grass with the view of exterminating it. The method I have found by far the best is to let it grow until about the middle of summer then plow it up thoroughly, yet not too deeply. I then turn right in and go over the fresh plowing with my spring tooth harrow. I try to go right over the fresh plowing and set my harrow to work well under the surface, dragging up the quack grass plants and roots. I let these lay exposed on top of the ground a day or so in the hot sun then go over with a rake, remove from the field and burn. By going over an infested field quite frequently with my spring tooth, drying out the plants and roots then burning, I am able to keep quack grass quite in check on my place.

A Valuable Tillage Implement

I use my spring tooth harrow for summer fallowing, too, for it stirs the soil thoroughly, loosening it and aerating, at the same time exposing any weeds, grass, etc., for the sun and hot weather to kill.

I find my harrow an especially good tool for preparing a bed for alfalfa seeding for it gives me a loose, porous soil for a couple or so inches on top, while the lower portion of the seed bed can be left firm and compact.

Another excellent place I have used my spring tooth harrow is in preparing new ground after plowing when any ordinary steel drag harrow would continually clog up. The spring teeth jerk back and forth pulling out a large number of roots, while the teeth being high arched, do not trash up badly with leaves, and if a person will use it with care in new land, it is very, very seldom a tooth breaks for they are

real springy and readily snap over obstructions they can not pull out.

This one tool that I consider should be on every farm for it has a multiplicity of uses, and best of all I have found that it does excellent work on any task I have so far put mine to.

Does It Pay to Grow Grain Corn in the East?

WE think so, if the season is long enough so that the dent varieties will mature. There is still a lot of state or flint corn grown on our Eastern farms, and as it requires a shorter season, it can be grown where the heavier yielding dent varieties will not ripen. We know of some farmers who take great pride in keeping the same variety of flint corn by careful seed selection over a long term of years, making it a little better each year. But as a general rule, the flint corns will not yield heavily enough to be really profitable. Of course there may be conditions which are the exception.

There are, however, thousands of farms in our eastern states lying in frost protected sections not too far north having a fairly long season where the production of dent corn should be, and on many farms is, a profitable side line. The dent varieties will yield from 20 to 30 per cent. more shell corn to the acre than will the flint.

Varieties That Are Desirable

Two very excellent flint varieties are Hall's Golden Nuggett and Mammoth Early Flint. Good yielding dent corns for this section where there is a fairly long season are West Branch Sweepstakes, Cornell Number 12, and Hall's Golden Nuggett. Luce's Favorite is also an excellent corn, both for silage and for grain, where there is a good long season.

On Henry Morgenthau, Jr.'s farm at Fishkill in Dutchess County, New York, he grew seven or eight acres of Cornell Number 12 this past season, which yielded heavily corn of very high quality, which fully matured.

Soy Beans for Ensilage?

THIS is a very common question. Yes, they make very excellent ensilage, chiefly because they are so high in protein. They do not, however, usually grow well in the same rows with corn. Either the corn does well and the soys fail, or vice versa. Those who are having the best success with soys plant two rows of corn and one row of soy beans. Most grain drills can be regulated so as to get this combination.

Varieties commonly planted are the Ohio Select 9035, Medium Early Green, the Wilson, or the Mongol. The variety for best results will vary with the location of your farm.

Getting a good Corn Crop starts with getting the right kind of tested seed of the right varieties.

The Agricultural Outlook

(Continued from Page 27)

The Harvard Committee says: "The money market despite the slight rise of actual rates in November, is favorable to continued expansion of business. The output of manufacturing and volume of freight traffic have increased substantially since mid-summer and building continues very active. Agricultural prices have risen almost to the level of prices in general, and the general European situation is better than at any time since the war. The prospect in the United States during the first half of 1925, therefore, is for general business improvement".

Babson considers the outlook "moderately optimistic" with the post-war readjustment period far advanced and most conditions fundamentally favorable. Moody is hopeful for the entire year and finds "definite tangible indications that the present period of business expansion should run into the spring of 1926."

Business Cycle Affects Farm Products

Business activity contracted in the first half of 1924 but expansion took place in the second half. For the year as a whole, activity, as measured by production in basic industries and by employment in manufacturing industries, ran about 10 per cent less than in 1923. The ebb was due to the fact that the shortage of urban housing had largely been made up, the textile industry had been turning out goods faster than they were consumed and the automobile boom had passed its peak.

There is an ample foundation on which a big business year in 1925 could be erected. The gain in farm buying power itself will be a factor of consequence. Building, fencing and repairs on the farm have been neglected and some of this "shortage" will be made good. Cities are still expanding and all classes are increasing their consumption of industrial products. Assured of political stability for several years, the railroads are planning an extensive construction program. The economic revival in Europe is being reflected in an increased demand for manufactured goods as well as foods and raw materials. These conditions could easily be effective throughout the new year.

The ups and downs in business activity and employment undoubtedly affect the demand for such raw materials as cotton, wool and hides and, to a less extent, the demand for foods of higher grade such as meat, dairy and poultry products, fruits and early vegetables. While changes in the income of the industrial classes are reflected primarily in the amount of savings, yet standards of living are modified to some extent. Besides the probability that increasing employment will help the demand for farm products in 1925, there is the increasing growth of population, amounting to nearly 1½ million people a year, calling for a corresponding increase in the number of loaves of bread, pounds of meat, butter, and cheese, yards of cloth and the like.

Foreign Situation Best in Years

Two years ago, the possibility of a general European collapse figured in all discussions of the American business and agricultural outlook. That danger is passed. While Europe is still in bad shape, conditions are the best since the war and they are gradually improving. The coming year is even more certain to bring a foreign industrial revival than to produce business expansion at home.

This is already reflected in the increased rate at which foreign countries have been taking our cotton and absorbing wool in the primary markets in the southern hemisphere. Demand for wheat, rye, hog products and tobacco will be stronger, as one of the first effects of reviving industrial activity

abroad will be to raise their standards of living from the level of post-war impoverishment, rather than to build up a fund of savings for payment on reparations or international debts. This does not mean that more of these food products will be taken than in 1924, as the size of our surplus must be considered, but foreign buyers will be in better position to pay good prices.

This whole process will eventually lead to withdrawal of some of the excessive stock of gold in the United States and to increased imports of manufactured goods. Credit has not been expanded upon the basis of this gold hoard, however. The rate of withdrawal of gold is not likely to be soon enough, to have great bearing on the domestic business situation before 1925 is well advanced.

Labor and Supplies May Cost More

An era of business expansion usually is a period of rising prices. Quotations on farm products are likely to be higher than in 1924, on the average, but prices of other commodities may gain even more rapidly. The probable long time tendency of farm prices to gain on prices of industrial products may be interrupted temporarily. With a broad demand for labor in factories and on construction gangs, wages of farm labor are likely to be a trifle higher. This raises the possibility of a slight gain in farm costs of production.

The probable physical volume of agricultural output in 1925 varies greatly with the particular product. In the sphere of grains and other crops, the supply situation in the first part of the year will be dominated by the amount left from the harvest of 1924. In general, these crops have been disappearing rapidly and reserves to carry on until next harvest are smaller than the size of the last one would indicate. The main exceptions are potatoes and hay.

Crop Production A Guess

At this date, the 1925 harvest is very much a matter of conjecture and depends more upon the character of the growing season than any other factor. The forecasts of a long distance weather prophet who says 1925 will be another unfavorable year are attracting much attention. It is necessary to assume, however, that the weather will be of the average brand.

In making a guess as to the way 1925 crop output will compare with 1924, it is notable that, in spite of the bad growing season in 1924, corn, apples, and tobacco were the only major crops whose yields per acre were materially reduced. Crops that thrive in a rather cool season with ample moisture, such as wheat, oats, barley, potatoes and hay yielded better than in 1923. While an average season would certainly mean a larger corn crop than was produced this year, the general conclusion that the total volume of crop production will be much the same as in 1924 appears tenable. There will not be many more farmers than in 1924 and perhaps fewer hired men, but more remunerative prices will result in some of the fields abandoned in the last year or two being put back to work.

As between the different crops, there will be a tendency to plunge on corn in the middle west, on wheat in the north-west and on cotton in the south. The latter half of the year may see a downward trend on these products, depending on whether the weather permits a good yield, foreign production, particularly of wheat, and the trend of commodity prices in general.

The balance between live stock and grain, which always is in the process of shifting, is changing to a stronger emphasis on grain production at present. The live stock situation will be dominated by the weather.

(Continued on Page 32)

Ask any one of these 125,000 happy owners

IF YOU THINK that you have a good reason for getting along another year without modern light, ask one of the 125,000 owners of Colt lighting and cooking plants. Find out what this investment has meant to them. They will be glad to tell you.

It has meant releasing their wives from drudgery. It has done away with sooty lamps and wicks that always need trimming. It has ended slavery to a dirty coal range. It has replaced old-fashioned irons with a modern gas iron, which makes ironing almost a pleasure.

It has meant safety to their children. It has stopped the danger of overturned lamps. It has guarded sensitive eyes from the improper light which weakens the whole system of the growing child.

It has made homes more livable and farming more worth while.

You, too, can have Colt light—at less, for the average farm, than the cost of the cheapest automobile. You can have perfect light in every room of your house as well as in your barn and poultry buildings. And you can know you have a permanent blessing, for there is nothing to wear out or get out of order.

Union Carbide for gas in the Colt light plant is sold direct to the consumer at factory prices. One of the 175 Union Carbide Sales Company warehouses is located near you. Union Carbide is always uniform. World's best quality. Highest gas yield. It is always packed in blue-and-gray drums.

Bigger Milk Checks in 1925

are yours if you resolve now to feed your cows better.

You don't want any surplus milk when the market is flooded with it. But the point is that your cows need a ration with plenty of protein to produce what milk you want at low cost. With the right ration you can get as little or as much milk as you please by feeding lightly or heavily. Dairy men who have clover and alfalfa hay have the basis of good feeding, but even the best of hay doesn't furnish enough digestible protein.

Since you must have a grain ration to supply this lack, why not make up that ration of ingredients that will furnish the necessary protein as cheaply as possible? Do you know that

Diamond Corn Gluten Meal,

containing over 40% protein, less than 4% fibre, and 1680 lbs. digestible nutrients per ton, is the most economical protein basis for any dairy ration? If 25% of your total mixture is **Diamond**, the rest can be made up of your homegrown oats, if you have them, or of bran and a little oilmeal.

Make up your mind that your profits in 1925 depend largely on your system of feeding. We have a ration card that will mean dollars to you. If you want it, write to:

Keystone Berkshires Win First At Chicago

FORTY-NINE Berkshire breeders in 15 different Keystone counties are receiving the congratulations of their neighbors on the success of the carload of Berkshire barrows shown at the International Live Stock Exposition in Chicago, November 29 to December 6.

Competing in a class of 15 carloads of barrows of all breeds, the Pennsylvania entry justified the claims of Keystone swine men, that it would do better than last year's carload, by taking first prize money and the blue ribbon. The carload was shown in the 200-250 pound class. A Berkshire litter from a heavier weight class defeated the Pennsylvania group for grand championship honors.

Part of Associations Program

The barrows were contributed by Berkshire breeders of the state, and fed and fitted at the Pennsylvania State College farms.

This project was fostered by the Pennsylvania Berkshire Breeders' Association, J. P. Winslow, Brookville, secretary, as a part of a state swine improvement program.

Breeders Who Contributed

Breeders by counties who contributed hogs are: J. C. Cowan, M. Earl Moore, Fred A. Moore, Alec Cooper, T. P. Smith, J. H. Marshall, A. M. Wilson, W. A. Haag, C. R. Jordan, J. G. Schwab, D. W. Bish, Alpha Hazlett, O. W. Minich, A. W. Bish, A. A. Neville, B. Anthony, Jack Neal, D. H. Doverspike, Joe Rhodes, Hollis Green, T. J. Stevenson, and N. M. Aaron of Jefferson county. Sycamore Farms, R. N. Altman, S. S. Yocum, R. Yocum, J. G. Eagelman, and C. S. Adams of Berks county.

J. W. Weigle, G. E. Tanger, Harry C. Brinton, and A. B. C. Williams, of Adams county. N. M. Bender, Mrs. H. S. Nolt, C. F. Hess, and H. S. Gatchell of Lancaster county. George Neff, C. L. Wilkinson, and Woodbrook Farm of Bucks county.

I. T. Zook, Mifflin county; H. S. Wagner, Cumberland county; Laurel Locks Farms, Chester county; Penhurst Farm Montgomery county; J. M. Hindman, Clarion county; Dr. R. M. Meisenhelder, York county; G. H. Dippe, Columbia county; W. F. Rishel, Centre county; Elm-brook Farms, Elk county; and Palmyra Quarry Farms, Lebanon county.

The Agricultural Outlook

(Continued from Page 31)

nated in the early part of 1925 by higher feed costs.

Throughout the year, receipts of hogs will be lighter than in 1924, and, in the later months, shortage is likely to become a reality, because of the curtailment of production of which there is positive evidence. Receipts of cattle also are likely to show some falling off, because of fewer fed cattle early in the year and smaller shipments from the range in the latter half. Lamb receipts will probably gain slightly for the year as production is under stimulation. The momentum of the trend toward dairying will be checked, in a measure, by the feed situation. If good feed grain crops are harvested in 1925, attractive prices for fat cattle and hogs may cause the pendulum of production in those two fields of endeavor to swing the other way again.

In sum, we can count upon some crops in 1925 being larger than in 1924, and others smaller, depending upon which are favored by the weather. The total of all crops is not apt to change a great deal unless the weather departs far from the normal.

With the promise of larger domestic consumption and improved foreign buying power, prices should be enough better than in 1924 to more than offset any rise in production costs, giving the average farmer in 1925 the largest income he has had since 1920.

How To Control Abortion

A Disease Which Costs Thousands in Losses

IN ANSWER to your letter relative to infectious abortion in cattle, I would say that a great deal of work has been, and is being, done on that disease. The trouble known generally as infectious abortion includes the results of infection by several species of bacteria. The form of the disease that occurs most commonly appears to be due to a micro-organism first discovered by Professor Bang of Denmark in 1897 and known as the Bang organism, or *Bacterium abortum*. The outbreaks that occur in herds where the disease spreads from one animal to another are produced usually by this organism. Other bacteria have been found to be associated with certain cases. In other words, the expulsion of the immature fetus is not always due to the same cause.

It is not possible to solve the mysteries connected with the nature of an infectious disease in a short time. Much valuable information about infectious abortion has been obtained. It has been demonstrated that many cows that abort can be treated so that they become good breeders in the future. It is a matter of dealing properly with each individual case. Careful treatment of cows that abort will restore a large percentage of them to the breeding herd. Occasionally inflammation of the womb, infection of the ovaries, or some other morbid condition,

following the expulsion of the foetus, renders the animal sterile. Some cows that abort will recover without assistance, but a much larger percentage of them can be restored to the breeding herd if they are given proper treatment. Just what shall be done in individual cases must be determined by existing conditions.

Much Done Toward Immunizing

A very large amount of scientific work has been done in search of an efficient method to immunize cattle against abortion. It was recommended in England to use a vaccine consisting of living abortion organisms that were injected subcutaneously in the cows several weeks before they were bred. The method has been tried repeatedly in this country but the results indicate that it should not be used except in badly infected herds because of the danger of spreading the disease when the vaccine is used where abortions have not occurred in recent years. Killed cultures of the Bang organism have been used for the same purpose but the experiments have shown, like the vaccine, that they are not satisfactory. It is believed, however, that some immunity can be produced by the use of vaccines and killed cultures, but there is doubt whether or not cows can be immunized to the point where they are protected against real infection. Again, all cattle do not respond the same. Some individuals may become immunized to a much greater degree than others by vaccination or by passing through the disease. Many experiments are under way for the purpose of determin-

ing the practical value of these methods. One of the important points to be determined is to devise a method by which animals that are actually infected with the Bang organism can be detected. A large amount of work has been done on the agglutination, or blood test, for this purpose. It is believed, by most workers on this subject that it is a fairly satisfactory method for picking out animals actually infected with the Bang organism. As it is a specific reaction for this organism, it does not give any information relative to infection with other species of bacteria.

Enough work has been done on infectious abortion, caused by the Bang organism, to enable competent veterinarians to make much progress in cleaning up an infected herd and in preventing the spread of the trouble to other herds. However,

no method has yet been found whereby animals in a herd that have already become infected may be treated so that they will not abort. The control of this trouble rests in the thorough treatment of the aborting cows. If this is secured the disease can be reduced to a minimum.

Infection Can Be Avoided

Because of the many varieties of the Bang organism and the difference in the resisting power of individual cows there is little hope of finding a successful remedy or measure to prevent animals that have already become infect-

ed from aborting; but if they are properly treated at the time they can be restored for its greater part to the herd. It is possible by careful treatment to prevent infection.

Much experimental work has been done to determine the way by which cows are infected with the Bang organism. There is abundant evidence from this source to show that they may contract the disease by taking the germs into the body with the food. This emphasizes the importance of keeping the stables well disinfected and in separating cows that are about to abort from the rest of the herd.—V. A. MOORE.

Cure for Cow Pox

Would you let me know a cure for cow pox as I had a cow and she must have had it when I bought her as it showed up when she freshened. There is a hard lump forms right alongside of teat on the udder and then it breaks out with a sore and a hard scab. I am using something that the doctor gave me but it does not seem to heal up.—H. O., Bucks County, Pa.

VARICELLA or Cow Pox is generally prevalent in the spring and among young animals.

Treatment consists of preventing the retention of milk, such as is apt to occur by scabbing over the extremity of the teat. Draw off the milk regularly with a syphon. Occasionally mammitis results from the extension of inflammation along the mucous membrane of the gland. Avoid communicating the disease from sick to healthy animals when milking, isolation is seldom necessary. Do not use the milk.

We would suggest the vaccination of the animal by your local veterinarian. The application of Unguentine will remove the scab and allow ulcer to heal.

What Shall We Do About Abortion?

WE HEAR much all of the time about the ravages of bovine tuberculosis, but there is another disease which, from the farmer's standpoint, is nearly if not quite as bad, about which we hear comparatively little. We refer to contagious abortion. This terrible cattle scourge causes the dairymen of the country to lose hundreds of thousands of dollars every year, and the worst of it is while there is a way of controlling tuberculosis, equal progress has not been made in handling contagious abortion. In order to answer intelligently the many letters we get from dairymen asking for help and advice in the control of abortion we took the matter up with Dr. V. A. Moore, Dean of the New York State Veterinary College at Cornell University, and asked him to give us the status of the disease and anything that he has to recommend in the way of prevention and control. No one in America is better able to speak with authority on this subject than Dr. Moore. His answer is on this page. No dairyman should miss reading it.—The Editors.

Save
\$20
per cow
with a
De Laval
Milker

Conservatively figured, a De Laval Milker will make at least \$20 per cow per year in saving time and increased milk which usually comes as a result of its use and because of its regular, stimulating and soothing action.

Multiply this by 10, 20, 30 or the number of cows you are milking by hand and you get a very conservative idea of what a De Laval Milker really will make you in profit.

In addition, when it is considered that cleaner milk can be produced, that the drudgery and dislike of hand milking are eliminated, and that dairying is made more pleasant for owner, son or hired man, you have the answer why so many people are installing De Laval Milkers—and especially when it is borne in mind that a De Laval Milker can be bought on such liberal terms and such long time that it will actually pay for itself as it is being used.

More Important than the Finest Dairy Equipment ~is the health of the Udder~

DON'T overlook the udder and teats—the profit zone of your cows. Often a very slight injury will mean the loss of several dollars worth of milk. By looking carefully after the comfort of these key organs you can add many quarts of milk to the average daily yield.

Bag Balm Insures an Unobstructed Milk Flow

This famous healing ointment, clean and sanitary, has wonderful power of penetration and healing. Quickly clears up any congestion of the udder tissues, Bunches, Caked Bag, chapped teats, cuts, bruises, etc.

This big 10-ounce package costs only 60c and a little goes a long way. Sold by feed dealers, general stores and druggists. Order direct if dealer is not supplied.

League Buys Big Milk Company

THE Dairymen's League Cooperative Association, Inc., has purchased the business and properties of the W. M. Evans Dairy Company, which has a large retail family trade in Kings and Queens Counties. The transfer will take place on January 1, 1925.

The twelve country plants embraced in the deal will be retained and operated by the association in furtherance of its policy to extend its fluid markets for the milk of the association's members. The Association has contracted to sell the city end of the business to Borden's Farm Products Company.

The W. M. Evans Dairy Company's city properties include a pasteurizing and distributing plant at 32-34-36 Lexington Avenue, Brooklyn, three additional distributing stations in Brooklyn and one in Queens. Today the company is operating 226 retail routes. The concern was incorporated under its present name in 1913.

The twelve country plants, all fluid milk shipping stations, are located as follows: Beerston, Delaware County, N. Y.; Newton, Sussex County, N. J.; Bridgeville, Warren County, N. J.; East Homer, Cortland County, N. Y.; South Gilboa, Schoharie County, N. Y.; Winterton, Sullivan County, N. Y.; Central Square, Oswego County, N. Y.; West Monroe, Oswego County, N. Y.; North Brookfield, Madison County, N. Y.; Ninevah Jct., Broome County, N. Y.; Lynn, Susquehanna County, Pa.; and Monroeton, Bradford County, Pa.

Western New York Notes

M. C. BURRITT

WE have had steady cold winter weather now for nearly three weeks with no thaws and almost no sunshine. The ground and the trees are still covered with a coat of ice with but little snow. These conditions are not favorable to work out of doors and very little has been done. Neither is there much inclination to pitch into big tasks just now. It is a rest and holiday period and we haven't felt the call of a new season yet. Some farmers have cut a little wood, a few have pruned a bit, some have hauled out a few loads of manure. Corn husking in the barn is a filler-in. But on the whole the hired man doesn't earn his wages in December and the boss himself doesn't turn in much profit.

Fruit markets have shown a little more life this past week but buyers have taken the lower grades and sizes, regarding the best as too high priced. Cabbage is

rather dull. Wheat is easily bringing \$1.55 to \$1.60 with many believing that it will finally reach \$2. Hay is moving a little at from \$12 a ton for fair clover to \$16 for good alfalfa at the barn.

A Comparison of Living Costs

Its somewhat disconcerting to find how busy one can keep on a farm this time of the year and not do anything except live and keep the stock comfortable. It may cost less cash to live on a farm than in the city, but it takes a lot more time and energy to provide the ordinary comforts of life. What the city man pays cash for the countryman works to provide; and if we were to value his time as the city workman values his, we should probably find that it costs more to live in the country than in the city.

For example; instead of taking in his milk from the doorstep, the farmer has to feed, care for and milk his cows to get his supply; instead of having his wood or coal delivered, the farmer works it up or hauls it himself; instead of telephoning his grocer and having his supplies set down in his kitchen the farmer has to drive several miles for them. Then there's butter to be made, hens to feed and eggs to gather, milk utensils to wash, usually he family washing to do (the men do much of this in winter for help is almost impossible to find), ironing, etc., etc. And the more labor saving equipment the farmer installs the more time he finds he has to spend repairing and looking after it. Necessity forces him to be his own garage man, blacksmith, plumber, carpenter and all around repair man as far as possible. And all of this takes time, time, lots of time! So the winter days go, used up in living; not that they aren't worth it—just the stubborn fact of the cost of chores and existence.

Where the Home Means More

Long winter evenings with one's family are compensations. Farm families probably spend more time together than almost any others. There are not so many attractions away from home. It is difficult for any to go without father or mother going along to drive the car and there is a sort of a traditional home loving feeling which keeps the family together evenings. This is the time to read and to play together. There are the continued stories in "The Youth's Companion" and other magazines to read to the children, or a good book or fairy or legendary story. There are lots of fine old books to read to the children: Robinson Crusoe, Swiss Family Robinson, Robin Hood, Kidnapped, Huckleberry Finn, Tom Sawyer and a score of others. Just now we are reading Grimms Fairy Tales. They stimulate the children's imagination and point good lessons as well. Sometimes we have the neighbor's children in to share these with us.

To my mind there is nothing so stimulating to these good practices, nothing so easy to group the family around or so comfortable and satisfying as an open fireplace. We lost much when we abandoned this original heating device of our fathers. The roaring "chunk" stove or the glowing coal stove fire made fair substitutes, but when these gave way to the modern furnace, the house lost entirely this center of attraction. City people realized this first and have brought the fireplace largely back into use, but it naturally belongs on the farm where the good home life is traditional and the wood supply is still abundant. Donald G. Mitchell has expressed this better than I possibly can:

"The days of wood fires are not utterly gone; as long as I live they never will be gone. Coal indeed may have its uses in the furnace which takes off the sharp edge of winter from the

whole interior of the house, and keeps up a day and night struggle with Boreas for the mastery. Coal may belong in the kitchens of winter; I do not say nay to this; but I do say that a country home without some open chimney around which in time of winter twilight when snows are beating against the panes, the family may gather and watch the fire flashing and crackling and flaming and waving, until the girls clap their hands and the boys shout, in a kind of exultant thankfulness, is not worthy the name."

So we burn our old apple tree wood—excellent for the purpose—draw heavily on our winter's apple supply, visit and read together these long winter evenings before the open fire.—M. C. Burritt.

New York County Notes

Ontario County—We are having some real cold weather. Temperatures have been down to the zero mark several mornings but we have not had enough snow for sleighing. Cabbage is down a little lower, sales have been running anywhere from \$12 to \$18 a ton. Potatoes 50c. All kinds of grains are higher.—H. D. S.

Chautauqua County—The biggest blizzard of the year came on December 13 and 14 and piled up heavy drifts in the eastern slopes in the highways between Stockton and Mayville. At recent auctions Holsteins have averaged \$45 a head. Colts, coming three years old, sold for \$75 each. Late cut hay has been bringing \$7 a ton. The Farm Bureau has been taking an inventory of farms and in one township half of the farms were vacant.—P. S. S.

Chautauqua County—We have been having some very severe weather. Farmers are using the snow to haul logs and wood. The milk supply is running light, many dairymen are not feeding grain to their cows. Hens do not seem to be laying as well as usual. Farmers are finding it a difficult proposition to meet their taxes. League members got 23c more for November milk at Sinclair condensary than non-pool producers. Butter is selling from 45c to 50c, eggs 50c, potatoes 50c to 75c, hay \$10 to \$12 at the barn, fresh cows \$50 to \$75. Dairymen are hoping for better prices this coming year.—H. J. N.

Schenectady County—The late rain enabled a number to finish their plowing. Meadows do not look very good on account of the very dry fall. Little hay has been pressed as yet. This county has many miles of snow fence erected and much snow machinery on hand and will endeavor to keep all of the main roads open for traffic if heavy snows do come. Potatoes and cabbage are low in price.—S. W. C.

Dutchess County—Farmers have been getting out a fine supply of wood on account of the open winter. Potatoes are selling at \$1, eggs at 80c. Tractors were still plowing up to the middle of December. Poultry has been selling at 35c a pound live weight. Taxes are the highest in many years in this county.—Mrs. H. J. H.

Montgomery County—Not so much fall plowing was done on account of the dry weather this fall and the recent freeze after the rain. Auctions are numerous. Many dairies are being disposed of. Pork is scarce with many farmers. The opening of a new slaughter house in Albany should affect the milk situation, as we see it. Many farmers will go into the hog raising game instead of selling so much milk. Farmers have taken advantage of the freeze with no snow to work in the woods. A man can do almost twice as much when he doesn't have to wade around in the snow.—Anonymous.

Important Warning!

There is only one "Congoleum" and it is identified by the Gold Seal pasted on every pattern. "Congoleum" is a registered trade name and the exclusive property of Congoleum-Nairn Inc. If you want "Congoleum" be sure to look for the Gold Seal.

On the floor is shown Congoleum Rug pattern No. 323. In the 6 x 9 foot size it costs only \$9.00.

"Brush the snow off, children. It can't hurt Mother's new Congoleum Rug"

Heedless little feet that love to tramp through snow and splash in puddles, that seem to pick up dirt wherever they go—bring no worries to the mistress of this kitchen.

For there's a Gold-Seal Congoleum Rug on the floor and she knows it can be cleaned in a moment. Just a few strokes with a damp mop and the cheerful pattern will be as bright and spotless as new.

It's the smooth, seamless surface and heavy waterproof base of Congoleum that make it so easy to clean. Dirt and dust cannot work into these rugs. Liquids and spilled things cannot stain them.

Many Beautiful Patterns

And the attractive designs are so varied that you can easily find one suited to any room in the house. There are artistic and elaborate Oriental motifs, dainty and fascinating floral effects and neat tile, mosaic and conventional patterns.

Gold-Seal Congoleum Rugs are no bother at all to lay. After a few hours they'll hug the floor without tacks, cement or fastening of any other kind.

And you'll go far before you'll find such big value at so low a price.

Popular Sizes—Low Prices

6 x 9 ft.	\$ 9.00	Pattern No. 408, shown	1½ x 3 ft.	\$.60
7½ x 9 ft.	11.25	below, is made in all the	3 x 3 ft.	1.40
9 x 9 ft.	13.50	sizes. The other patterns	3 x 4½ ft.	1.95
9 x 10½ ft.	15.75	illustrated are made in	3 x 6 ft.	2.50
9 x 12 ft.	18.00	the five large sizes only.		

Gold-Seal Congoleum By-the-Yard. The same flat-lying, durable, easily-cleaned material as the rugs, but made without borders for use where it is desired to cover the entire floor. Lies flat without any fastening.

Gold Seal CONGOLEUM RUGS

It's a Brute for Wear!

*Two facts about "U.S." it will pay
you to know ~ ~ ~*

TWO thousand times for every single mile you walk—your boots are bent and wrinkled!

A few times and these strains wouldn't hurt. But repeated day in

and day out—thousands upon thousands of times—that's what breaks the ordinary boot.

And that's why into every "U. S." Boot and Overshoe is put *live, elastic rubber*.

If you cut a strip of rubber from a "U. S." Boot, you'll find it will stretch more than five times its length without breaking—and snap back into shape like an elastic band. This live rubber *stays* flexible—and waterproof.

What's more, in this live rubber are anchored layer on layer of tough fabric

reinforcements. Where the hardest strains come, there are *as many as eleven* separate layers of rubber and fabric. They reduce chances of breaking to a minimum.

As a result of these important facts, farmers in every section of the country are finding "U. S." Boots and Overshoes a big economy.

"U. S." Boots and Overshoes wear longer because they're *built* to wear longer.

It will pay you to ask for "U. S."

Other "U. S." Rubber Footwear

You'll find every type of rubber footwear in the big "U. S." line. There's the Walrus, the famous all-rubber overshoe—the "U. S." lace Bootee, a rubber workshoe for fall and spring—"U. S." Areties and Rubbers—all styles and sizes for the whole family. Look for the "U. S." Trade Mark whenever you buy—the honor mark of the largest rubber organization in the world.

Reviewing The Latest Markets

MILK PRICES

THE Dairymen's League Cooperative Association announces the following prices that dealers will pay the League during the month of January for milk testing 3% in the basic zone of 201 to 210 miles from New York City. It is to be understood, of course, that the prices mentioned below are not received by the farmer, but go into the pool. They represent the prices dealers pay to the League.

Class 1 Fluid milk	\$3.07
Class 2A Fluid cream	2.10
Class 2B Ice cream	2.25
Class 2C Soft cheese	2.15
Class 3A Evaporated whole milk	
Cond. whole milk	1.90
Class 3B Whole milk powder	1.85
Class 3C Hard cheese other than American	1.65

Class 4 prices will be based on butter and American cheese quotations on the New York market.

These prices are the same as those for December, with two exceptions. Classes 3A and 3B have advanced 10c in each case.

Sheffield Producers

The Sheffield Farms Producers announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$3.07
Class 2	2.20
Class 3	1.75

Class 4 price determined by butter and cheese quotations on the New York market.

Class 1 advanced from \$2.80 to \$3.07, while Class 2 advanced 20c, and Class 3 advanced 10c over December prices.

Non-Pool Cooperative

The Non-Pooling Dairymen's Cooperative announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$2.80
Class 2	2.20
Class 3A	1.80
Class 3B	1.75

Class 2 advanced 20c over the December price, while Class 3A advanced 20c.

Interstate Producers

The New York State Milk Producers Association (Philadelphia Price Plan), announce the receiving station prices or the price to the farmer in the 201 to 210-mile zone from Philadelphia for 3% milk is \$2.19. In the 101 to 110 mile-zone, the price is \$2.29.

BUTTER MARKET STEADY

Butter prices have advanced since our last quotations. Right after Christmas the market took a decided turn for the better, trade became more active and prices advanced. During the few days

preceding the holidays there was not a great deal of activity in the market and after Christmas jobbers and retailers had to stock up in a hurry for the New Year. On the 29th and the 30th prices advanced to 46c on the fanciest marks of 93 score. Some of the trading bore the ear marks of speculation.

Consumptive demand has taken a turn for the better. It is exceedingly good, in fact, and as a result there is more confidence in the general situation. In other words the butter market has a little better feeling to it than has been true during the past few weeks.

CHEESE MARKET FIRM

The cheese market continues to hold its firm position. There were a few days last week when things quieted down but that was to be expected during the holiday trade. As the old year goes out and the new comes in, the firmness of the market becomes more pronounced and prices are on the upward trend. Western quotations are higher and are still above a parity with New York City. State whole milk flats, held, grading fancy to special will bring from 24 to 25c, an advance over last week from 1/2 to a full cent per pound.

Average run held flats are worth from 22 1/2 to 23 1/2c. Fancy and pet marks of fresh whole milk flats are bringing from 23 to 23 1/2c while average runs are turning at 22 1/2c. Undergrades are running as low as 18c.

EGG PRICES THE SAME

Egg prices have experienced no change since our last quotations, although the market has taken on a little different aspect. Fancy large size nearby whites are in a little freer supply. As a matter of fact they are more than ample to warrant any improvement in prices, and in some instances are accumulating. They are just about holding their own in others. If receipts increase to any degree we may experience a slight falling off in prices on these fancy marks. Nearby whites that come into direct competition with Pacific Coast whites as well as medium grades on the other hand, have met an improved market as well as a slight advance.

EXPRESS POULTRY HIGHER

The live poultry market is still way off-color due to the embargo. Trade is not up to normal but receipts are so short and the Kosher trade needs so much stock that they are paying good prices for anything that passes the inspectors. There is some improvement in the market compared to the first few days after the declaration of the embargo. Trading is more active and the retail end of the trade is taking hold with a little more confidence. Consumers are not quite so fearful of bad effects from eating poultry as they were at the high time of the excitement.

Live rabbits have taken a sudden spurt forward and just before the New Year prices were running as high as 60c cents a pound. Just how long these will be maintained no one knows, but it is hard to conceive that this quotation will be reduced any appreciable amount during the next few weeks. Much trade has turned from chickens and fowls to ducks, geese, turkeys and rabbits.

POTATOES SLIGHTLY BETTER

As the old year goes out and the new year comes in, the potato market takes on a slightly better tone. The difference is so slight it is in direct proportion to the age of the new year. Nevertheless, although it is slight, the improvement is there just the same. The market is far from healthy. There is not the active trading that accompanies a good market but in spite of this a feeling of optimism prevails among the potato men in the market. States have improved 5 cents a hundredweight, advancing from \$1.05 to \$1.10. These prices are for potatoes delivered in New York City. States in 150 pound casks vary from \$1.65 to \$1.85 per sack. This spread in quotations is due to the variation in quality. There is some complaint of hollow heart. Maines are the same as they have been for the past couple of weeks bringing from \$2 to \$2.10 per 150 pound sack. Long Islands are experiencing a little better market but prices are still around

\$2.20 to \$2.25 F.O.B. loading point.

It looks as though we will see a little stronger market if receipts continue as they have been during the past few days. On December 31 there were something like 250 to 260 cars on the tracks in the Metropolitan district. Ordinarily the number runs way over 300, often close to 400. This low number is due to lighter daily receipts primarily. Cold weather undoubtedly has been holding up shipments. As stocks get low there is a likelihood of a slight hardening in prices.

CABBAGE A LITTLE BETTER

The cabbage market has improved slightly. It was down to \$10 and \$11 F. O. B. while now it is back to \$14 and \$15. We have advised that some of the cities just west of us, such as Cincinnati, Columbus, Ohio, and the like have been running better cabbage markets than New York. Western New York cabbage men may therefore find it to their advantage to keep a weather eye on those cities.

ONIONS SLIGHTLY HIGHER

It is rather difficult to get real top quotations as the trade is reluctant to pay asking prices and real fancy goods are in strong hands. Western New York reds are bringing the same prices as Yellows, \$2.75 to \$3.00 per hundred, while the quotations on Orange County Red or Yellow stock ranges from \$2.50 to \$3.00. Fancy whites are worth from \$4 to \$4.50 while fair to good stuff is bringing from \$3 to \$3.50. In general the onion market is doing better.

BEANS CONTINUE TO DRAG

With the exception of red kidneys, the bean market continues to drag heavily. This does not mean that prices are not being sustained on all varieties. The market is about steady from that standpoint. Marrows are a little bit easier. Pea beans are meeting a slow trade but they are steady. White kidneys are also turning slowly. Red kidneys continue moderately active and steady to firm. Marrows are bringing anywhere from \$9.25 to \$10.25, depending on quality, as is true of all our quotations, while screen and prime pea beans are bringing from \$5.50 to \$6 per cwt. Red kidneys are bringing from \$9 to \$9.35 and white kidneys from \$8.75 to \$9.50. This outside quotation on white kidneys is rather extreme and little business is being done at that figure.

HAY MARKET STEADY

The hay market continues steady, trading is quiet. Prices remain the same as they were last week. There is plenty of stock available. Supplies of straw are quite heavy and as a consequence quotations have weakened to some extent.

FANCY LIVE VEALS HIGHER

Limited receipts and an active market have been responsible for rather sharp advance in the live calf market. What few veals have been coming in have sold approximately at \$18 per hundred for prime marks, while fair to good stock brought anywhere from \$14 to \$16.75. This is in the neighborhood of \$4 to \$4.50 better than the market was a few weeks ago.

Live lambs are also in rather light receipts and as a consequence these quotations have been higher with \$19.25 as the top mark for real fancy stock.

It is not expected that the present strength in the market, however, on practically all grades of meat and the higher prices prevailing just before the new year comes in, will be maintained after the new year holiday demand is supplied. At least that is the general consensus of opinion among the market men. The feeling is that as soon as the New Year holiday is supplied we are going to see a slight slump which means by the time this issue reaches the reader, prices will have turned much easier. This remains to be seen. If receipts continue as light as they have been and consumptive demands holds up even near what it is now, there is little likelihood that we will see heavier slashes in quotations. It is doubtless true the market will be easier. Just how much, no one knows.

More Money from Your Crops

You can do it with seeds that have vitality and life—that are of high germination and adapted to the soil. The work of preparing the land and planting is the same whether you use ordinary seed or pedigreed seed. But the crop tells the story; added profit—often double or triple—comes from using hardy, big-yielding, Michigan-grown, Isbell's seeds.

46 Years of Better Seeds

For nearly a half century, Isbell's have been developing yield, vitality and hardiness in seeds. Ceaseless experimenting, careful selection, better growing, sorting and cleaning methods have done this. 200,000 customers have proved this profit-building quality—they plant Isbell's seeds year after year and get bumper crops. We grow our own seed—you buy direct from us—saving money and eliminating all risk of substitution.

This Valuable Book—FREE

The 1925 Isbell's Seed Annual tells how to select seeds how to prepare soil, gives cultural directions, and quotes direct-from-grower prices. The coupon brings it free.

New Jersey Farm News

State Makes Rapid Strides in TB Clean-up

NEW JERSEY is making gigantic strides forward in the eradication of T. B. from the dairy herds of the state, for during the past year the number of herds under supervision have been more than doubled. Just how far the State has gone may be appreciated when we take into consideration the fact that over 1700 herds are now under supervision. Through the use of tubercular tests more than 4,000 tubercular animals have been detected and destroyed during the present year. New Jersey surely is one of the strongest members in our "Kill a Kow" campaign. The AMERICAN AGRICULTURIST "Kill a Kow" campaign was organized with just that point in mind, namely to eliminate the undesirable animals, thereby reducing the enormous surplus that is directly responsible for low prices, to eliminating those producers that do not play their keep and are generally a menace to the health of those who drink the milk.

Work Going Forward Rapidly

In spite of the fact that there are 1700 herds now under supervision in the T. B. campaign in New Jersey, with a total of more than 25,000 animals, nevertheless the work is only reaching a fraction of the whole territory. It is estimated that there is something like 150,000 dairy cows in the state of New Jersey. There is one encouraging feature however, and that is that the number of cows now under supervision represent an increase of 66 per cent over the number under supervision last year. According to the agricultural officials a greater percentage of increase of supervised herds in 1925 will only be prevented by insufficient funds. To carry on the work during 1924, the state of New Jersey appropriated \$135,000, while the Federal Department of Agriculture contributed a like sum.

Dairymen of New Jersey fully appreciate the fact that if they are to stay in

the business they must maintain clean herds. The public demand for better milk, as indicated by the dairy ordinances adopted in many New Jersey cities, has brought dairymen to the realization that it is necessary to provide milk that will meet the new specifications. Most of these new milk ordinances specify that all milk to be sold in the city must be from tubercular-free cattle. All other milk must be pasteurized. Unless pasteurized, milk from tubercular cows is held to be infectious to children. That dairymen of the State are keeping step with this popular demand for clean milk is indicated by the fact that scores of dairy farmers now have applications on file for the inspection of their herds. No dairymen under the present law is compelled to have his herd inspected for T. B. It is a matter of choice with each producer. In New Jersey they want inspection and supervision in order to meet the demand of their trade.

Poultry Certification Going Forward in New Jersey

THE number of applications for poultry certification and inspection that have been filed with the State Department of Markets at Trenton, clearly denote that the New Jersey plan of certified poultry flocks is right. At least it is right as far as the confidence of poultrymen and buyers is concerned, for breeding flocks of approximately 15,000 birds are now represented in the application on file. Those include White Leghorns, Barred Rocks, Rhode Island Reds and Jersey Black Giants.

According to the State Bureau of Markets, the Bureau will re-inspect 4500 Jersey Black Giants which passed the test last year. The flocks to be inspected are chiefly from the poultry producing sections of Hunterdon, Gloucester, Cumberland, Bergen, Middlesex and Mercer Counties.

Pennsylvania Farm News

THE annual Pennsylvania Farm Products Show will be held, as usual, in Harrisburg on January 19, 20, 21, 22, 23, 1925. According to the show committee, twenty-five State-wide agricultural organizations have made preparations for their part in the show. The committee also reports that many new features have been added this year and that the greatest exhibition in the history of the affair is in prospect. This is to be expected in view of the fact that awards in all departments have been increased something like fifty per cent. The total premiums will amount to something like \$5,250. This will undoubtedly mean keener competition and keener competition always means a better show.

Electrically Equipped Farmstead a Feature

One of the features of the Show this year will be the electrically equipped farmstead of J. W. A. Rutherford, whose farm is located a few miles east of Harrisburg on the William Penn highway. The committee in charge of farm equipment wants it to be understood that it is not supposed that any farmer will find it practical to have all the exhibited appliances on his farm. The farm has been electrified to show in an impressive way the possibilities in the use of electricity on the farm.

To make the exhibit as complete as possible, all sorts of devices, some so recently developed that they have never been shown to the public before, will be displayed. The farm will be open to the public from January 14 to 24. The committee in charge of the Electric Farm Exhibition is made up of representatives of the Giant Power Survey, the State Department of Agriculture, The Pennsylvania State Grange, the Pennsylvania State College of Agriculture, the State Council of Agricultural Associa-

tions and the Pennsylvania Electric Association.

Eastern Pennsylvania Notes

OLIVER D. SCHOCK

A. H. Deysher of Reading is the owner of Pennsylvania's new champion dairy cow for one year production of milk and butter. She is Sparrow Hawk Johanna a 6-year-old pure bred Holstein Friesian. In 365 consecutive days she produced 28,028.9 pounds of milk containing 11010.27 pounds butterfat.

Berks County Pomona grange elected the following officers: Master, W. N. Miller, Tipton; overseer, George Schuler, Fleetwood; lecturer, J. S. Grim, Kutztown; Steward, Milton Leiby, Virginsville; assistant steward, Mrs. George Ruth; lady assistant steward, Mrs. George Ruth; chaplain, Mrs. Howard G. McGowan; treasurer, Charles M. Wort; secretary, J. K. Miller; gate-keeper, Howard Snyder; Ceres, Mrs. Albert Dewees; Flora, Florence Loose.

The Lancaster Cattle market quotes prices as follows: beef steers best \$9.65; bulk sales \$7.50 to \$8.50. Hogs, best \$12; bulk, \$11.50 to \$11.75. Calves \$14.50 to \$15. The market reports little business going on. In fact it is practically at a standstill.

Crop prices are as follows: Wheat \$1.60 per bushel, corn \$1.20, oats 50c, rye \$1.20, hay \$20, straw \$14, oat straw \$13, potatoes 50c a bushel. Farmers mutual insurance companies holding their annual meetings report heavy losses through barn fires. Lightning was responsible in many cases, while incendiaries were rampant in Lancaster and Berks county to an unusual extent. Assessments for \$1,000 insurance range from \$1.50 to \$2; storm insurance damage assessments amounts to 50c to \$1 for \$1,000 of insurance.

Green's Trees Shrubs, Vines

NEW Cortland Apple

The American Pomological Society awarded to the Cortland the Wilder Silver Medal. To qualify for this medal, a new fruit must exhibit superiority to all existing varieties with which it will compete.

McIntosh Apple, Bartlett Pear Dwarfs and Standards

Service Department

What Our Insurance Policy Is---How To Renew It

ONE OF THE many services AMERICAN AGRICULTURIST is trying to render its subscribers is to give them an accident insurance policy at cost. Before making arrangements with the North American Accident Insurance Company for this service, we made a very careful investigation and found this company to be absolutely reliable. The prompt way in which the company has handled the claims of our people show that our confidence in it was well founded. During the month of December, for instance, this company has paid claims file like those that follow:

Geo. Blanchard, Oneonta, N. Y.	\$ 130.00
Charles Leasure, Nichols, N. Y.	20.00
Carl Holtz, Palatine Bridge, N. Y.	80.00
Mrs. Mary Parise, Chaffee, N. Y.	30.00
Alfred C. Souva, Great Bend, N. Y.	37.14
Lora M. Souva, Copenhagen, N. Y.	37.14
Elbert Luce Estate, Sinclairville, N. Y.	1000.00
M. V. Stevens, Goshen, N. Y.	40.00
Carrie L. Coleman, Campbell Hall, N. Y.	10.00
Louis M. Wolverton, Gainesville, N. Y.	90.00
Alice McIvor, Phelps, N. Y.	70.00
G. M. Lyon, Wyalusing, Pa.	20.00

It does us a lot of good when we realize that it is through the service furnished by AMERICAN AGRICULTURIST that our readers who meet with misfortune promptly receive accident insurance coming at a time when it is especially appreciated. We have many letters on file like those that follow:

"I am indeed perfectly satisfied with your settlement and think that was the best seventy-five cents I ever invested. I took out the insurance on Friday and got hurt on Monday."—Adam J. Hayes, St. Johnsville, N. Y. Here is another from Rollo W. Peake, of Cato, New York:

"Your check received for full settlement of my claim. I am very well satisfied with the amount as it was for all that I claimed. Also wish to thank you for promptness of settling claim."

And still another from George Blanchard of Oneonta:

"I have received from the North American Accident Insurance Company their check for \$130 covering the full period of physical disability caused by accident under the traveler's policy which is sold by American Agriculturist agents. I am fully satisfied and it is a great help as I will not be able to work under seven or eight months from time of accident."

Mrs. Elma V. Chase of Sinclairville, New York, writes as follows:

"I received the check of \$1000 yesterday which is the payment in full of my father's policy held in the North American Insurance Company. I thank you for your promptness."

We make no preposterous claims for this accident insurance policy. Of course, for the small price for which it is sold, it has limitations, and in order to avoid any misunderstanding, the policy should be read very carefully. But when one of our salesmen shows this policy to you, there should be no hesitation, for a great insurance company and the old reliable AMERICAN AGRICULTURIST stand back of it—just as we stand back of all business concerns which deal with our people through the paper.

There have been a good many inquiries about how to renew this policy when it expires. The policy is issued for one year at the cost price of seventy-five cents, which must be taken in connection with a three-year subscription to AMERICAN AGRICULTURIST for two dol-

lars, making the total for a three-year subscription and the insurance for one year two dollars and seventy-five cents. The insurance policy will be renewed each year for seventy-five cents on application to AMERICAN AGRICULTURIST, as long as our present arrangements with the North American Accident Insurance Company remain in force.

"The Customer Is Right"

ONE of the most satisfactory things that come to us in connection with our work with the Service Bureau is the policy followed by a majority of the great commercial mail order firms and even by many of the smaller ones of square dealing with their customers. Many times when we have felt that some of the claims of our people were a little unjust, business houses have promptly settled without any question when we brought it to their attention. Two such instances have come to our attention very recently. Here is a copy of a letter from the National Cloak and Suit Company to one of our subscribers:

"The American Agriculturist has very kindly forwarded your complaint to us and it received our careful attention.

"We are having an investigation made in regard to the goods you failed to receive. However, to avoid further delay, we have had an adjustment made for you and enclosed you will find our check for \$15.55, the amount of the claim."

The other claim was against Mr. W. W. Norton of Ogdensburg, New York, who sells English shepherd dogs, who replied to us in regard to a claim as follows:

"Your letter is at hand and in reply to same would say you will find enclosed check for \$30 which your subscriber sent us for a dog. As the dog is now spoiled, and of no use to me, your subscriber can have the money and the dog too."

We believe this way of doing business is not only morally right, but it is good business policy, for nothing is so necessary for any business concern as "good will" which is based on long years of square dealing. On the other hand, such reputable business firms have an equal right to expect fairness on the part of their customers.

Not A Desirable Investment

WE HAVE had several inquiries regarding the Ford Motor of Canada Bankers shares, and therefore we have asked our investment expert, Mr. George

T. Hughes, to prepare the statement in regard to these shares, which follows:

An active campaign is on just now for the sale of what is known as "bankers shares" of the Ford Motor Company of Canada. For the benefit of many inquirers the facts in the matter are here set down. In the first place neither Henry Ford nor the Ford Motor Company of Canada has anything to do with these bankers shares. In fact an official of the Ford Motor Company of Canada is on record as advising against the purchase of these bankers shares. The second important thing is that the price asked for these shares in most cases is exorbitantly high. Many of our subscribers have received letters informing them as an owner of a Ford car they were entitled to subscribe to these Ford of Canada bankers shares at \$6.00 a share and that the price would shortly be raised to \$6.50 a share.

Anyone Can Buy Them

Passing by for the moment the fact that anybody can buy these shares at any time in any quantity whether he owns a Ford or a Rolls Royce or a buckboard or has only two legs to carry him about, it must be put down that the market for these shares on the day this was written was 5½ bid, 5¾ asked. Each share represents one-hundredth interest in one share of Ford Motor of Canada and therefore a fair price would be one-hundredth of the price of the original stock. The market quotation for this original stock also on the day that this was written was about \$522. In other words when you pay \$6.00 or \$6.50 for these shares you are making a present to the dealer who may need the money but for whose support as far as we can see you are not responsible.

There is nothing illegal in this operation. What the dealer does is to buy a certain number of shares of Ford Motor of Canada and deposit them with a trustee, generally a trust company. Then he issues against this security one hundred bankers shares for every original share. He is entitled to a little profit for his trouble, that is if any one is anxious to buy his wares.

One other point. These bankers shares involve the same business risk which applies to the original shares. The Ford Motor Company of Canada is a prosperous and well-managed organization. Its stock, however, is not a suitable investment for those who need safety first.

Substituting for Government Bonds

Financial Department: Will you tell me about this investment in bonds: Sinclair Oil 7 due 1937, can be bought at 92; Serbian 8 around 90. Are they safe? I have some Government Bonds, but would like a little better rate of interest.—W. H. N., New York.

SINCLAIR Oil 7s and Serbian 8s are not suitable substitutes for Government bonds. If you want a little higher return than Libertys pay you should take something more conservative. For this purpose there is nothing better than U. S. Steel preferred, which sells around 121 and pays \$7.00 annually netting a return of about 5¾ per cent. It can be bought in lots of from one share up through any New York Stock Exchange house or your bank will buy them for you and is instantly marketable on any business day of the year.

He Got His Money

"About a week ago I received your letter stating you had written the Beechnut Packing Company.

"And today I received the check for fifteen dollars that I could not get otherwise. Thank you many times for your prompt and helpful service.

The Trouble Maker—By E. R. Eastman

CHAPTER XV

OF all the dairymen in the township of Speedtown, the only ones who stayed away from the Monday night meeting in the town hall were those few who were opposed to the League's aims. While the crowd was large, it was quiet and bent on getting the latest news and instructions for carrying on the fight. It had been only a few days since Jim addressed the first big meeting of farmers in the town hall. But with what a difference he was received!

Then he had sensed their disappointment in him until by the magnetism of his personality and his sincerity, he had won their approval. Tonight, he was the accepted and unquestioned leader to whom every dairyman instinctively looked for information and direction. To be sure, he was not cheered when he started to speak, for it was not time for cheering. They all realized the serious situation which they faced. But approval of their leader was there just the same, and the quiet, determined farmers followed his every word.

He told them that while only two days of the fight had gone by, great progress had been made.

"Although the time is short," said Jim, "all of the farmers got the notice and over half of them withheld their milk on the first day of the strike. It is my pleasure to tell you of reports coming to me from the chairmen of farmers' committees from every community in the county which shows that this morning, the second day of the fight less than ten per cent of the normal supply of milk was delivered to the dealers' milk plants."

Cheers.

"Good," shouted a farmer, "but this is only one county. We can't win it alone. How about the others?"

"I'll answer that with this telegram received less than an hour ago from Albert Manning, Secretary of the Dairymen's League. Here's what it says:

"New York dealers received less than one-half of their normal supply of milk yesterday. Reports indicate that the supply will dwindle to less than twenty-five percent tomorrow. This is beyond our greatest expectations. It indicates that farmers are thoroughly aroused. Both men and women all over the territory are making sacrifices and are preparing to make them as long as necessary to win this fight. Applications for membership are coming in faster than we can take care of. Your county is to be commended. It is in the front line in the first day's results." (applause) "All sorts of rumors are being circulated to create lack of confidence and to break our ranks. Continue to hold meetings, talk things over, visit farmers who do not come to the meetings. We are going to win!"

"Manning's right!" shouted Dan Greene. "We're in this to stay if we have to dump all of the milk in the ditch."

"One thing we must be careful about," said Jim, "and that is, not to do anything illegal or pull any rough stuff. All of us are mad, all of us are under a strain, but we've got to keep our feet on the ground. And we've got to have public opinion with us. We will lose the public sympathy the minute we began to break laws."

"Public sympathy butters no parsnips," interrupted young Greene. "I, for one, ain't in favor of keeping my milk home, and watching some scab draw his by my door to the factory every mornin'."

"I'm not, either, Dan," said Jim, "and at every opportunity we need to talk to

our neighbor farmers who are delivering their milk. But we will never win them to our side by pounding them over the heads."

AFTER Jim's talk, there followed a short business session. Arrangements were made for farmers to use their cars to visit their neighbors to keep correct information circulated and to cheer up one another. A sales committee was appointed to help market the large quantities of butter which were being made at home and to find help for some farmers who were having a pretty hard time in taking care of their milk.

One man spoke of how difficult making the milk up at home was on the women folks.

"They are the ones who are carrying the burden; they are the ones doing all of the hard work taking care of the milk at home. And by George, how loyally they're doin' it!"

"You're right," shouted Ted Miller. "I think we ought to pass a resolution

What Happened in the Story Last Week

At least Dorothy Ball did not accept Bradley when he proposed—But she promised to "think it over." So much for Jim Taylor, Dorothy's sweetheart from childhood but now alienated by a disagreement with her father, learns from the young farm bureau agent who has innocently chosen his farmer-friend as a confidant. Jim tries to dismiss Dorothy from his thoughts and to keep them on the great milk strike, in which he is a leader and which has split Speedtown into warring factions. A farmer named Greene is a "fire-eater" and threatens violence, which is strictly forbidden.

thankin' the women for what they are doin' to help win this fight."

The resolution was made, seconded and carried.

After making arrangements for another meeting which was to be called on the following Wednesday evening, the session was adjourned.

When it was over, young Greene got twelve or fifteen of the younger radical hot-blooded farmers together outside.

"Taylor's all right," he told them. "I suppose he's got to talk that namby-pamby stuff publicity, but I'm tellin' you we'll never win this fight by a lot of milk sop methods. This is war; and we might just as well recognize first as last that a war is won by fighting. It's all right to reason with some fellers, but the only kind of reason that appeals to others is a good swift kick properly placed. That's what some of these scabs need. Just so long as these dealers get milk from the scabs, we'll have to keep ours home."

"That's the talk" another young farmer agreed, clapping Greene on the shoulder. "Let's give them a taste of their own medicine. If they won't stop drawing their milk, we'll find a way to stop them."

"That's just what this little get-together is for," said Greene. "A few of us can put our heads together and you'll see more action in ten minutes than a big meeting like that tonight can ever get. I for one am for seeing that that man Shepherd doesn't get any more milk, neither tomorrow mornin' nor any other morning 'till his bosses and the rest of the dealers crawl around and beg for it at our price."

"Now you're talkin'. But let's quit talkin'. The question is, how'll we do it?"

"The worst scab in town is old Johnny Ball," said Greene. "This mornin' he didn't dare to come to town with his milk himself, so he sent his hired man. If we can stop his milk, it'll be an example to the other scabs."

"Things have gone too far," said another. "There's too much at stake to let that pig-headed old mule get away with it. Before he spills the beans for

us, we ought to spill a little milk for him."

"That's what's goin' to happen, too," said another, "if he keeps on."

"Just what I think," nodded Greene, "but we've got to be careful not to get Taylor into trouble, and not to get mixed up with the law. Here's my idea. If you agree with it, put a mask on your face and meet me about 8 o'clock tomorrow mornin' at that old deserted barn of Harris's, near the main road to North Speedtown. You know where it is, about a mile and a half out from here. It's kind of a lonesome hollow and there ain't any houses near. Bill Mead will be comin' down through there with his load of milk about half past eight or nine o'clock."

"Fine! We'll be there!"

After a little more talk, they separated and went home.

THE next morning there was much mystification and curiosity on the part of the women in several Speedtown

"Ain't got no money, boys," quavered Bill, "if that's what you're after."

"Ain't after money," growled the leader. "We're after hangin' scab dairymen, and especially their hired men, this fine mornin'."

Bill was getting his courage back.

"So that's it, is it? Well, hang and be danged to ye," said he, and yanked his arm loose from his captor, and went into action.

There followed an exciting and gory five minutes, which ended with Bill lying on his back in the middle of the dusty highway, with several men sitting on him; while the others turned the team and the load of milk squarely around. Then they put the bloody but still unsubdued and belligerent Bill back on his load and, warning him that they would be waiting there for him again if he came that way with any more milk, they told him to "vamoose."

Bill vamoosed, but not until he had extended to his enemies a frevent and much embellished promise that he would be back with re-enforcements.

Old John Ball saw him coming up the road on his return, and knew there was trouble afoot. He met Bill as he drove into the barnyard, took one look at him, and his old beard began to quiver.

"What's the matter?"

"Two or three hundred men led by that whelp of a Taylor laid for me in that holler, near the old Harris barn this side of Speedtown."

"What did they do?"

"I tried to get through, and they pulled me off the wagon. Then I held them off for an hour, knocked six or eight of 'em completely out, but finally more'n forty got me down and jumped on me, and I had to quit. Then they turned the wagon 'round, started me for home, and said they'd kill me next time I tried to deliver any milk."

"Turn your team around again, Bill, and wait for me."

Old John went into the house, up to the garret, took down his old muzzle-loading shot-gun, which he sometimes used to hunt woodchucks, went back down to the kitchen and with wooden ramrod and oil rag, he carefully cleaned it. From the top pantry shelf, he took powder and ball, loaded, rammed the charge home, and carefully placed the cap on the firing pin.

Meanwhile, Mother Ball, coming across the barnyard with a newly discovered nest of eggs in her apron, saw the load of undelivered milk, and went to find out from its battered-up driver what had happened.

When Bill had finished telling her about the army, which had now grown to more than a thousand men, Mother Ball said:

"Well, why don't you put the team out?"

"Waitin' for Johnny," said Bill non-committally.

"What's John goin' to do?"

"Don't know," lied Bill,

"I do," said Mrs. Ball, "but he ain't goin' to do it. Where is he now?"

"In the house."

In the kitchen, Mrs. Ball found John putting the finishing touches on his arsenal. Without apparently paying any attention to him, she marched by him and put her eggs in the pantry. Then she came out, squared herself in front of him and with hand on broad hips, she said:

"John Ball, what are you aimin' to do?"

The face that her husband raised to her scared her. The grey eyes under shaggy

(Continued on Page 42)

Ways To Catch The Muskrat

And How To Prepare Pelts For The Market

THE pelt of the muskrat is the latest of the fur-bearers to become fully prime, being at its best in late winter and early spring. The rat is also a very easy animal to take in the steel trap, although somewhat more difficult to locate when snow covers the ground and ice has tightly locked the rivers and ponds. If a place can be found where the houses of the animals were thrown up before the water froze over, these mounds will appear above the ice now. You may be sure that the animals are spending much of their time in these houses and getting their

food on the roots found at the bottom of the pond. Sometimes, where rats are plentiful, air holes will be found along the banks of the water. These frequently are made by the bank rats, in other words those that live in holes under the banks rather than in houses of their own building. Such holes have entrances below the surface of the water. The animals come out of their dens, either in the bank holes or the artificial houses, get a root from the bottom of the pond and come to these breathing places to wash and eat it. Traps set in the water where the creatures must

crawl over them to get out of these holes, are sure to make many catches.

Some trappers capture rats by cutting open one of the houses and putting the trap inside. Some states, New York, for instance, have made laws prohibiting trapping in and near houses. It will be well, therefore, for our boys to look up the law in their state regarding trapping. That is a wise precaution, anyway.

One of the best ways to capture the muskrat in winter is to cut a hole through the ice and put down a stake with a shelf on it below the surface. On this shelf set the trap and bring the chain out onto the ice and fasten it to something that cannot be dragged into the water when a capture is made. Carrots and sweet apples are good baits for muskrats, or corn on the cob may be used in winter when the bait will freeze.

In making muskrat sets, be careful to stake or fasten the chain of the trap out in the water in such a manner that the captive cannot reach solid footing. If this is done the animal will soon drown, but if the land or ice can be reached above the surface of the water the chances are that you will have nothing more than the foot of the creature for your trouble.

Muskrat pelts are in good demand this winter and our boys ought to make a good thing out of trapping them.

How To Prepare Pelts For Market

The pelts of our common fur-bearers are valuable merchandise and careful attention should be given to the preparation and marketing of same. A good pelt may be spoiled or its value considerably impaired by neglect or improper handling. Animals killed by shooting with shot gun or rifle furnish pelts less valuable than those taken by trapping. Holes in the

pelt are faults hence in skinning it is necessary to be very careful.

There are two ways of removing skins. One is known as "casing," which means that the skin is removed without cutting down the under side. The other is the round stretching, which method is employed on some of our furs.

To remove a pelt by the former method, hang the animal up by one hind leg. Using a sharp-pointed knife, cut from the point of one hind leg to the other across the body at the base of the tail; then,

with the aid of two sticks held firmly in the hand or a split stick, pull out the tail bone. Pull the pelt off over the head, skinning around the front legs and cutting carefully around the eyes, ears and mouth on the head. Having removed the pelt, use a dull knife or a stick to rub and scrape off all surplus fat and flesh.

Make a board the shape of the skin and pull the skin over it with the flesh side out, then tack it in place to dry. Pelts should be made as large as possible, without stretching them out of shape. Skins like those of mink, weasel, otter and fox are stretched long. The "cased" method applies to mink, weasel, otter, skunk, fox, opossum and wild cat. Usually the raccoon is stretched flat and the same is true of beaver, badger and prairie wolf.

In the open method of skinning the pelt is removed by cutting down the under side of the animal and skinning out each leg separately with the head as nearly perfect as possible. The pelts are tacked on a board or side of a building for a few days. Pelts should not be dried in the sun or in artificial heat. They should not be allowed to freeze, however, so it is necessary that they be placed in a fairly warm room. In the case of most pelts the tails should be kept perfect but it is customary to split them part way if very fat and fleshy. This is true of skunks and raccoons. The tail of the muskrat is of no value, that of the opossum is usually cut off and allowed to go with the skin.—C. H. Chesley.

TO solve a cross word puzzle, start by going over the list of definitions for one word of which you are sure. Write it in the spaces which start with a number corresponding to the one in the list. That gives you a clue to other words, either down or across. Remember that when your puzzle is finished, the words must fill all white spaces, read correctly both ways, and correspond to the given definitions.

EASY NOW TO SAW LOGS AND FELL TREES

WITTE Log-Saw Does the Work of 10 Men At 1/20 the Cost—Saws 25 Cords a Day.

A log saw that will burn any fuel and deliver the surplus power so necessary to fast sawing is sure to show every owner an extra profit of over \$1,000.00 a year.

Such an outfit is the Witte Log-Saw which has met such sensational success. The WICO Magneto equipped Witte is known as the standard of power saws—fast cutting, with a natural "arm-swing" and free from the usual log-saw troubles. It burns kerosene, gasoline or distillate so economically that a full day's work costs only twenty-two cents.

Wm. Middlestadt reports that the Witte has replaced forty men using buck-saws. Hundreds of users saw as much as twenty-five cords a day.

Mr. Witte says that the average user of a Witte Log and Tree Saw can make easily \$50.00 a day with the outfit and so confident is he that he offers to send the complete combination log and tree saw on ninety days' free trial to anyone who will write to him. The prices are lowest in history and under the method of easy payments spread over a year, only a few dollars down puts the Witte to work for you.

If you are interested in making more money sawing wood and clearing your place at small cost, write Mr. Witte today at the Witte Engine Works, 6303 Witte Bldg., Kansas City, Mo., or 6303 Empire Bldg., Pittsburgh, Pa., for full details of this remarkable offer. You are under no obligation by writing.

LET US TAN YOUR HIDE.

Horse or cow hides, calf, dog, deer, etc., made into coats (for men or women), robes, rugs or gloves. Or we tan your hides into oak tanned harness, sole or belt leather; your calf skins into shoe upper leather. Any desired color. FINE FURS, such as fox, coon, skunk, mink, muskrat, etc., made into latest style coats, muffs, vests, caps, neck-pieces or other garments.

No Middlemen Needed In Dealing With Us

Factory prices mean a big saving to you. Write for free CATALOG and STYLE BOOK. Tells how to take off hides, about our safe dyeing process on cow, horse and calf skins. Gives prices on all work. If you haven't enough pelts for garment you want, send what you have and we will supply the rest; or garment can be made complete from high grade skins we carry in stock. Furs repaired or remodeled. Estimates if desired. Automatic cold storage. Taxidermy and Head Mounting. Write today.

An Expert's Cake Hints

Good Advice For Next Baking Day

HERE are a few suggestions that may be helpful in producing satisfactory cakes:

Loaf or layer cake tins may be well greased and floured and the trouble of lining with paper dispensed with.

If the cake pan is set on a cold, damp cloth for a few moments the cake that has stuck will come out whole.

Waxed paper used in the cake mold eliminates the need of greasing.

Remember that the use of good butter, milk and other ingredients makes for quality of product in cake making.

The use of vivid colorings is not always in good taste in cakes. The colors produced by good ingredients are more appetizing than those of coloring matter. A little touch of color in the icing is often tasty, but even that can be overdone.

Half of your favorite chocolate or spice cake recipe and half of your white cake recipe may be mixed at the same time and put in the pan alternately for a marbled effect.

Flavoring extracts and spices should be used sparingly and care taken when combinations are used. Strong flavors are neither appetizing nor wholesome.

Snowflake Cake.

Here is a very delicious white cake originated by one of our high school girls that is truly delicious. I call it Snowflake cake and I think it deserves its name.

2 cups sugar	3 egg whites
2-3 cup butter	4 cups flour
2 cups milk	4 teaspoonfuls baking powder

Cream butter and sugar. Sift dry ingredients together several times. Add milk are used. Fold in the well beaten egg whites and flavor. Ice with plain boiled frosting made by boiling one cup white sugar with a little water until it forms a soft ball, pour over the stiffly beaten white of one egg, beating continually until it thickens enough to spread on cake. Two whole eggs used instead of three whites or even one egg gives a delightful product in this recipe. Brown sugar will turn the frosting into "sea foam."—Mrs. John Land.

Orange Cake.

Take 1/4 cup shortening, 1/2 cup milk, 1 cup sugar, 1 1/2 cups flour, 1 egg, 2 1/2 teaspoons baking powder, gated rind 1/2 orange.

Beat shortening and sugar until light and creamy; add eggs well beaten, flour, baking powder, salt, and extract; beat well, pour into greased and papered cake pan, and bake about half an hour in a moderate oven, or in two layer-cake pans about twenty minutes. This is an excellent foundation cake for use with various flavorings, icings, and fillings.

Roast Guinea Fowl

PREPARE for oven in same way as chicken and fill with a dressing made of four slices of dry bread crumbled, one-half teaspoonful pepper, one teaspoonful salt, one medium sized onion, chopped fine, one teaspoonful sage, one-half cupful butter, one-half cupful boiling water and two beaten eggs. Sprinkle with salt and pepper, and lay very thin slices of

salt pork over the breast and wings, holding them in place with toothpicks. Bake one hour and serve with giblet sauce.—L. M. THORNTON.

Is your kitchen table breaking your back? It is if it is not adjusted to your height.

After all the good books in existence are read, one may begin on the rubbish.

Headaches, irritated nostrils, and sore throats will be reduced by keeping a pan of water on the radiator or on the back of the stove so that moisture will be given off.

The Trouble Maker

(Continued from Page 40)

brows were cold and hard. Every hair of the bristling beard seemed to add griminess to the set mouth.

"Nuthin'."

"Yes, you be. But I ain't goin' to let you. You jest take that gun and march right back upstairs with it!"

The old lady seldom issued a command. For the most part, she was agreeable, pleasant and easy-going; but not unlike others of the same disposition, there were times when she meant business, and those few times in their married life when she had issued her command, old John Ball had obeyed. This time, however, he did not march.

"Mother," he said, "you just keep out of this. If there ain't any law in this country, I aim to make a little. That milk's goin' to the station!"

Dorothy, coming down the stairs into the kitchen, took in the scene at a glance, and heard her father's last speech.

"What's the matter, Dad?" she asked.

"Jest goin' to take the milk to the factory," said the old man grimly.

"Why I thought Bill took it."

"He started to, but he came back."

"What happened?"

"If you want to know, go take a look at him. He's out there with the wagon now. Yes, go look what your friend Taylor and his gang did to him."

"John Ball," said the old lady, "don't be an idiot. You're too old to get mixed up in this. Keep the milk home, and we'll skim it and make it up. We need some good home made butter anyway."

"Ain't goin' to do it, Ma. Matter of principle."

With his gun clutched as if in a charge, the old man stalked outdoors.

"Get off the wagon," he said to Bill, "and let Ma doctor your face."

"Where you goin'?"

"With the milk."

"Like — you are!"

"That'll be 'bout all from you. Get down from there."

One look at the menacing eyes told Bill this was no time for argument. Poor Bill had had about all the argument he wanted that morning anyway. So he slumped off the wagon, and went into the house.

John Ball climbed up, carefully holding his gun with one hand.

"Giddap!"

But before the horses moved, there was a rush of feet, a swish of skirts, and Dorothy sat beside her father on the wagon seat.

"Get off!"

"I won't! If you're bound to make a fool of yourself, I'm going with you."

Unflinching brown eyes met stern grey ones, until the old man turned again to speak to his horses. Down the road they went, while Mother Ball stood in the kitchen door watching until they disappeared around the turn in the road, all that she held dearest and best in the world was going into what she thought was sure trouble.

A Page of Make-Overs

AMERICAN AGRICULTURIST patterns are seam-allowing and guaranteed to fit. Always be sure name, address, pattern numbers and sizes are written clearly. Then enclose correct remittance and mail to Pattern Department, AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York City. Keep a record of your order.

No. 2308, with its graduated front panel, allows for extending a frock grown skimpy. Wear it with one of the smart new bright-colored belts. In sizes 16 years, 36, 38, 40 and 42 inches bust measure. Pattern 12c. Hot iron transfer No. 718 comes in blue or yellow. 15c extra.

No. 2314 permits inserting new material in both waist and skirt, to bring a "party dress" up to date. Wide, flowered ribbon takes away the "made-over" look. Sizes 6, 8, 10, 12 and 14 years. Pattern 12c.

No. 2173. The blouse and skirt combination is an extremely useful one when girls persist in growing. This pattern cuts in sizes 6, 8, 10, 12 and 14 years, and costs 12c.

No. 2307 shows, in two pictures, how very adaptable it is. Sleeves, belt, front panel, skirt—all are changeable at will. Sizes 16 years, 36, 38, 40, and 42 inches bust measure. Pattern 12c.

No. 2176, a one-piece apron, may be patched out from the remains of a kimono-sleeved wrapper, by reversing front and back. The pattern comes in one size only, 12c.

Apron No. 2313 also may be made from a worn dress, with the upper and lower sections pieced if need be. Sizes, small, medium, large. Pattern 12c.

No. 2146 with its panel and two-material sleeves, is admirable to make over the dress that had a soiled front or cuffs. Sizes, 16 years, 36, 38, 40 and 42 inches bust measure. Pattern 12c.

Are you one of those unfortunates who, in spite of diet and hard work, grow daily stouter? Get No. 2203! The over-dress effect is becoming anyhow, but this one permits of a loosened tunic and a corresponding panel on the undershirt. Sizes 36, 38, 40, 42, 44 and 46 inches bust measure. Pattern 12c.

Even a blouse sometimes needs renovating, or if you have a little left over material to be utilized, No. 2168, a slip-on blouse, is the answer. Cut in sizes 16 years, 36, 38, 40 and 42 inches bust measure. Pattern 12c.

For the small boy, separate waist and trousers use up yard-lengths of remnants and allow for growing, too. No. 2188 cuts in sizes 2, 4, 6 and 8 years. Pattern 12c.

Our dress-advice service is at your command! Ask the Fashion Editor to help you solve sewing problems that are bothering you. Send a stamped, self-addressed envelope and her personal answer will go to you by return mail.

That outworn voile or gingham or cretonne porch dress reappears in a serviceable form as an apron! If your material requires economy, fasten with snapers instead of sash ends at the back. Sizes 16 years, 36, 38, 40, 42 and 44 inches bust measure. Pattern No. 2207, 12c.

Be Sure Indoor Plants Have Care

WILTING of plants in winter is avoided by increasing the amount of moisture in the air. It is not necessary to keep the plant roots in water or to soak the soil continuously. To keep the air damp, nothing has been found which equals a pan of water set on or near the stove, register, or radiator, says Nature Magazine of Washington. The water in the pan is evaporated and distributed through the air, reducing the transpiration from the plants. Spraying the leaves with water every clear day also increases the moisture content and acts as a general tonic to the plant.

Watering the plants two or three times a day is not good practice. For winter plants a good general rule to follow is to

watch the soil at the top of the pot. When it is thoroughly dried out, add enough water to saturate the entire mass of soil.

To Poach An Egg

TO POACH an egg and have it soft all the way through, yet done perfectly, pour a pint of boiling water over an egg, in a large earthen bowl, cover tightly and set it on the back of the range where warm (but not hot) and let stand one-half hour. The most delicate stomach can digest eggs cooked this way. So many invalids dislike soft eggs and want them hard—but when cooked this way, they will be done, yet not hard and indigestible.—CLARICE RAYMOND.

Waste and farm accounts are at opposite poles.

Among the Farmers

New Yorkers Win Prizes at Grain Show

THE first entries ever made from New York State in the great International Grain and Hay Show at Chicago were selected as prize winners by the judges at the recent exposition. The growers who sent entries were Frank Kisselburg of Valatie, Columbia County, N. Y., and Otis Joroloman of Weedsport, Cayuga County, N. Y.

In previous years the grain men of the middle west, the far west, and Canada practically had the show to themselves. New York was a dairy state, they believed; now they realize its a grain growing state, too, with a propensity for breeding winning seeds as well as winning cows.

A. L. Bibbins of the **G. L. F. Exchange** interested the New York growers in entering the Show. Mr. Bibbins was formerly connected with the Michigan Agricultural College and in those days Michigan grain growers sent over a hundred entries to the Chicago show and one year won 29 out of a possible 30 prizes offered. This record in Michigan is attributed to the fact that that state was one of the first to realize the value of well bred seed, carefully grown, selected, and harvested.

Mr. Kisselburg won third prize in the difficult seed rye class where competition is particularly keen. He entered a sample of Head Selected Rosen Rye, grown from seed secured through Mr. Bibbins on the Maniteau Island.

Mr. Joroloman took second prize in the white wheat seed class. He was a first prize winner in this class at the Cayuga County Farm Bureau Grain Show and at the State Fair in Syracuse.

It is expected that next year there will be a great many entries from New York at the Show, as thousands of New York farmers are confining their seed purchases absolutely to known-origin, domestic, hardy varieties and so improving the quality of the grain seeds they grow.

Corn Borer Quarantine Extended

FURTHER territory in New York, Pennsylvania, Ohio, and Michigan is added to the area, including parts of New England, now under Federal quarantine on account of the prevalence of the European corn borer, in an amendment of the quarantine regulations issued by the Secretary of Agriculture, effective December 15. It is noted that no

spread of the pest outside of the area heretofore designated as infested in the New England States covered by this quarantine was determined. The new territory was found to be invaded during the past season.

The European corn borer has been in this country comparatively a few years. It has been found to be a dangerous crop insect pest, and a serious menace to a number of our food products, especially our corn crop. Under the guidance of the Federal Horticultural Board, both Federal and State forces are trying to prevent its spread to other parts of the country. By means of quarantines they are regulating the shipment of products likely to carry the pest outside the areas already infested.

Marketing Schools Held in Madison County

The first marketing schools held in New York State by the new Department of Marketing at Cornell University, were held in Hamilton and Cazenovia, Madison County, early in December under the direction of the Madison County Farm Bureau. Two-day schools were held in each place, and even though local farmers were making last efforts to get their fall plowing done, the sessions were appreciated by all who attended.

W. I. Myers and **Leland Spencer** conducted the schools and discussed the subjects of "Prices," "Some New York State Problems in Milk Marketing," "Fundamentals from Successful Co-operatives," "How to Use Crop and Market Reports in Selling Farm Products," and a round table discussion of marketing problems of the community. Dr. Myers and Mr. Spencer went deep

Not One But Four "Kill a Kows"

HERE'S another one for your "Kill a Kow" campaign. We are members of the Wallkill Valley Dairy Improvement Association since it started, which is the first organized in the state. We figure on killing four cows this winter and they are going to go irrespective if the campaign is carried through or not. These cows returned more than their feed cost, but not a sufficient labor return to warrant keeping them further. —**C.A. & A.E.Z.**, N. Y.

into underlying principles of disposing of farm products. They gave economic production equal importance with good marketing in meeting present low prices, showed charts with production and consumption facts and held open discussions. The men who attended felt that these men had made a thorough and impartial study of the subjects. The attitude of the local farmers who took part in the school was probably best expressed by **Scott Coulter** of Cazenovia who stated, "It is one of the most sensible discussions I have yet heard on farm marketing. There is nothing sensational nor biased about it."

Several communities have requested the Madison County Farm Bureau for similar sessions in other parts of the county. A one-day school is being planned now for Saturday, January 10th at Canastota.

Local men in charge of the schools were **John C. Morris** and **Fred Brainerd** at Hamilton; **Scott Coulter**, **Louis Davis**, **H. M. Bordwell** and **T. D. Thomas** at Cazenovia.

Is it all right to feed raw potatoes to milking cows and does it have any effect on them after a period of time?

Why Ventilate?

Next in Importance to the Hen Herself

NEXT to the hens themselves, nothing is of more importance in the hen-house than ventilation or some means of allowing the fresh air to circulate and carry off the impurities. While we are all familiar with the strong ammonia fumes that so often stifle us in a tightly closed hen-house, there are many who do not realize that the hens themselves are largely responsible for the heavy, damp floor litter and the thick frost coating on the walls.

From a physical standpoint a hen is a queer proposition. In the first place, she has no sweat glands to take care of the excess moisture of her body. She must, therefore, breathe this surplus moisture out through her mouth or else pass it off in her feces. In the second place, she is a rapid breather with a temperature around 104 degrees. Thirdly, if she breathes rapidly and tries to get rid of moisture, she will breathe even more rapidly if the air she is dependent upon is saturated with moisture already. She will travel at such a high rate of speed that she will clog or crack; she may die; she may be just weakened, but, in any case, she cannot have enough strength to produce eggs.

Careful computations show that one hundred birds breathe about eight pounds of water into the air every twenty-four hours. In addition, nineteen pounds of water pass off in the droppings during the same period. Or, in other words, one hundred hens produce twenty-seven pounds of water and water vapor every twenty-four hours. Is it, then, any wonder that the walls of a tightly closed hen-house coat with frost in cold weather or drip with sweat during warm days? Far better for the hen would it be if we opened the house up wide. We might better take a chance on freezing her at this time of year than actually drown her in a contraption dubbed a hen-house.

So much for the damage column. What is the relief? In general it is fresh air, but the problem is to get the air into the house without actually freezing the birds out. The muslin or curtain front house was the first attempt to solve the problem of moisture. Such houses have some big advantages: the screens can be thrown wide open on pleasant days and during bad weather they allow a good amount of fresh air to filter in. Their worst objection is that they make a house dark when they are closed. Also they clog with dirt. Rather than have a house with all muslin screens, it is a decided advantage to have half screens and half glass. Such a method insures better light and still permits of the house being opened up during pleasant weather.

A Straw Blanket Absorber

Sometimes houses are built with a loft. Instead of a ceiling there is simply rafters with wire spread across the beams. Straw is kept in the loft and changed from time to time. It absorbs a great deal of the moisture and keeps the air fresh.

Conditions can often be remedied by putting in ventilators or by working out a ventilation scheme of your own. It may be a hole or a long slit under the roof through which the constantly rising warm air may pass out. With all slits or cuts or ventilators it is best to box or arrange them so that, if a wind comes up, the air will not blow directly on the birds. A sliding door which may be set anywhere from full to a fraction open is a good arrangement for a ventilator, while a wide board placed behind a permanent cut under the roof will break any wind and send the air down into the room rather than letting it blow back along the roof to the perched and roosting birds at night.

There is one other necessity which helps in ventilating a hen-house. Box the sides of your windows and screens with a piece of wood or tin. Simply take a piece of board as long as your window is high and perhaps a foot wide. Draw a line from corner to corner and you have two nice triangular blinders for your windows. They will keep the air from sifting around the windows and striking the birds. On windy days they will send the air up. You will find that there are very few days in winter when you cannot let your windows back at least a foot at the top thus insuring a supply of fresh air. A string fastened to the building and a cleat on the window will enable you to set the window open at varying degrees to conform to outside weather conditions.

Most Houses Too Tight

It is a hard task to meet all the different types of houses. Most of them are kept too tightly closed for the health of the hens. If the writer has shown what an evil a tight hen-house is, if he has said enough about ventilation to suggest a solution of your problem, then the hens will benefit by the change. There are two rough rules to help you: first, the hen-house walls should never be coated with frost or drip with sweat; second, the smell of ammonia either day or night is a sure indication of danger from improper ventilation.

HILLPOT Quality
STURDY PURE BRED CHICKS
HIGH-EGG-YIELD
Egg Layers---Profit Payers
No wonder our chicks live and thrive—and quickly get down to the business of producing eggs for your profit. The secret of their success lies in the vigorous, healthy stock from which we breed them. These parent birds, carefully culled for best egg works, live a natural farm-range life, insuring offspring that cannot fail to produce results.
They're now show birds but letters from thousands of pleased customers show that they can—and do—lay eggs, especially during winter months when prices are highest

Chart of Recommendations

(Abbreviated Edition)

THE correct grades of Gargoyle Mobiloil for engine lubrication of both passenger cars and motor trucks are specified in the Chart below.

E means Gargoyle Mobiloil "E"

How to Arc. means Gargoyle Mobiloil Arctic

Read the A means Gargoyle Mobiloil "A"

Chart: B means Gargoyle Mobiloil "B"

BB means Gargoyle Mobiloil "BB"

Where different grades are recommended for summer and winter use, the winter recommendation should be followed during the entire period when freezing temperatures are experienced.

The Chart of Recommendations is compiled by the Vacuum Oil Company's Board of Automotive Engineers, and represents our professional advice on correct automobile lubrication.

For their correct lubrication, use Gargoyle Mobiloil "C" "CC" or Mobilubricant as recommended by complete Chart available at all dealers.

He doesn't come around any more

But Tin Pedler irresponsibility still exists

REMEMBER the tin pedler who used to sell miscellaneous pots and pans? He seldom comes around any more. For your wife found that really dependable wares were those bearing a responsible manufacturer's trade-mark. The first cost may be a few cents higher, but over the year there is a real cash saving.

With "tin pedler" or unbranded oils, too, there may be a small saving in price. But once the oil is in your motor, the saving disappears. Neither "specifications" nor mere looks can make one oil equal to another.

This season, the service you get from your car, truck, or tractor will largely depend on the oil you are buying right now. Will it be "tin pedler" oils and the chance of breakdowns and lay-ups? Or Gargoyle Mobiloil and dependable operation, day in and day out?

Real Economy

This year, more farmers than ever before are stocking Gargoyle Mobiloil for the work ahead. They know from performance that Mobiloil will save them real money in spite of the few cents more it costs by the gallon. And that's why

many of them will make a special trip to town—if necessary—to get their supply of Mobiloil.

Gargoyle Mobiloil is made by the foremost lubrication specialists in the world. "Tin pedler" oils are frequently job lots, coming from no one knows where.

The crude stocks used for Mobiloil are chosen solely for their lubricating value. The refining methods employed for Mobiloil preserve the lubricating value of the oil intact.

The uniformity of quality and body of each grade of Mobiloil is assured through many added steps in refining which are rarely, if ever, taken in the production of other oils.

These and other factors explain why the correct grade of Gargoyle Mobiloil almost invariably shows a cash-saving in operating costs over other oils. And that economy is most striking when the other oil's price per gallon is lowest.

Gargoyle Mobiloil is sold only by responsible dealers and marketers. The correct grade for your automobile, motor truck or tractor is clearly specified in the Chart of Recommendations. Every Mobiloil dealer has the Chart. For real economy make the Chart your guide.

Before You Buy

I want to send my new Cut Price Catalog FREE to every person who is thinking of buying Fencing, Steel Posts, Gates, Barb Wire, Roofing or Paint.

You can save fully 1-3 by ordering from this book and in addition you'll get better quality and satisfaction.

HERE'S PROOF—READ THIS LETTER

"I received fencing and find I saved about 30c a rod by buying from you instead of from local dealers, besides yours is a BETTER fence."—Harry Coffeen, Champaign, Ill.

REMEMBER!

Jim Brown PAYS THE FREIGHT

All my Fencing and Steel Gates are Double Galvanized—that's why they won't rust out—why my quality is BETTER—why they last 2 to 4 times longer. My Carbon Steel Posts are bigger, heavier and stronger. My Roofing is Asphalt with Wool Felt base—lasts as long as your building. My WearBest Paint can't be beat. And now with my New Cut Prices you will make a big mistake if you don't send for my new catalog and see for yourself the money you save before you buy elsewhere. My 3 big factories located at Cleveland, Ohio—Memphis, Tenn.—and Adrian, Michigan, also shipping points at Kansas City, Mo., and Davenport, Iowa, enables me to ship promptly to any locality.

**HARRIS
SEEDS**

The Most Successful Gardeners use HARRIS' SEEDS

That's one reason they are successful. Another is that, to succeed, a gardener must be a shrewd man and one who knows where to buy seeds to the best advantage. Harris' seeds are grown in the north and produce earlier and better crops than seeds grown further south. They are raised according to modern scientific methods of breeding which keep them up to the highest possible standard as to quality and yield.

We are large growers of Farm Seeds, Vegetable Seeds, Flower Seeds, Gladiolus, Dahlia and other bulbs and many flowering plants. Our new catalogue in colors contains many unusual suggestions for your garden and offers you the opportunity of buying seeds of a very superior quality direct from the grower at wholesale prices. Send for Free Catalogue. If you raise vegetables for market ask for our Market Gardeners' price list also.

What Lime Shall I Buy?

And A Simple Device For Sorting Potatoes

WE are continually getting letters from subscribers who are asking the question "What kind of lime should I buy or what is the best kind of lime?" The answer begins with those very common words used in answering questions, "It depends". It depends on the price, your location, the distance the lime must be hauled from the railroad, the amount of help available and how soon you wish to get the benefit of the lime.

Lime comes in three forms. There is ground limestone, quick lime or burned lime and hydrated lime, commonly known as "hydrate." In addition to that there are such lime-carrying products as oyster shells, marl and by-product materials that run high in lime.

The circumstances surrounding the individual farm where lime is to be applied will determine to a large extent the form in which it is to be bought. Lime should always be bought on the basis of the cost of sufficient lime to the acre of red clover. To the cash outlay must be added the cost of the haul from the station to the farm, storage and spread on the land. According to the Colleges of Agriculture, ground limestone seems to be the cheapest form in about 90 per cent of the cases.

Factors That Affect the Choice.

Where the haul takes the farmer over long, difficult, uphill roads, burned lime when it is good and when it can be bought at a fair price delivered, may be more economical, but burned lime is not at all pleasant to handle. The advantage in its use lies in the fact that in order to lime a piece of land with ground limestone about four times as much ground limestone would be needed as burned lime. Where burned lime is bought by the carload it is more expensive due to high freight rates. The advantage is in obtaining locally burned lime.

Hydrated lime is quick lime that has been allowed to slake. In other words the burned lime is allowed to take on water to the point that the "fire" in the quick lime is lost. It can be handled without the unpleasant effects that accompany the handling of burned lime. Usually about half as much hydrate is applied as ground limestone, which is a factor where long hauls are concerned and where help and time are serious problems. Both burned and hydrate lime have more high priced city labor expended on them than ground limestone. Moreover, the freight rate is a little higher on these farms compared with ground limestone. Hydrate lime, as we said before, will usually act quicker than limestone which is of considerable value where a crop is to be planted on soil that has not been limed until immediately before seed. This is rather a "close to the wind" procedure and not highly recommended by the best crop experts.

Limestone Should Be Ground Fine.

It appears that limestone that is ground to the proper fineness and containing a high percentage of calcium carbonate and an extremely low percentage of foreign matter, is cheaper than the same product after it is burnt and dehydrated with the attendant labor and incidental expenses.

There are many different kinds of ground limestone and a farmer should use a great deal of judgment in selecting the proper kind. There are some limestones of little value because of the fact that the stone is not finely ground. Furthermore they contain a great deal of foreign matter just as dirt and shale. Coarsely ground limestone is readily acted upon by the soil moisture and therefore the calcium oxide or lime in the stone is not readily available. Good ground limestone should pass through a 200 mesh sieve and there should be a very small

amount of foreign matter present.

Winter a Good Time to Haul

Winter is a good time to haul limestone or other lime carriers to the farm where it can be stored until spring. As a matter of fact under favorable conditions ground limestone can be spread during the winter on fall plowed land that is to be seeded to oats, barley and corn. By doing this during the winter, you are using labor to better advantage. Another advantage to hauling during the winter lies in the fact that the roads are hard and it is possible to haul heavier loads at this time than during the spring when the roads are deep with mud. There is a lot of satisfaction in knowing that the lime is in the barn ready for the spring work and that it does not have to be hauled through the heavy, deep, muddy mires that come with the springtime.

As far as the best kind of lime is concerned, the wise farmer will buy the form that covers the most land for his lime dollar to produce the cheapest clover, alfalfa or other crop.

A Simple Device for Sorting Potatoes

I SAW two original ways of sorting potatoes, this fall. At least they were new to me. The man using them grows about two thousand bushels a year and the device seems to work well for a business of that size. He does not sort in the field, thinking that it would take more time than the way he does it. When he is marketing from the field in the fall, he picks them up in crates and hauls to the barn floor. Here he has a shallow box about two feet square, on legs a little higher than the height of a crate and with one side of the box open. He dumps a bushel of potatoes into this box, puts a crate under the open side, and as the potatoes are pulled into the crate he picks out the small ones, the misshapen and those that are sunburned. This is much faster than dumping them on the floor and picking them up, as only the culls are handled separately.

When he begins to store in the cellar, another method is used. He has designed and made, what might be called a grader, but on a different plan than the commercial grader. It consists of a square trough, one end projecting into the cellar window, the other end just high enough so that potatoes can be dumped into it from a truck, and long enough so the potatoes slide down it slowly.

A Chute That Sorts for Size

The bottom of the trough if made from strips running lengthwise, and far enough apart to allow the small potatoes to drop through, where they are deflected into another crate. The strips that form the bottom are wider on top than on the bottom, so that potatoes starting to fall through will not become wedged. Iron rods run crosswise through the strips, dividing the slits into squares.

As the potatoes are dumped into the trough, the owner stands beside it, to keep them moving and to remove misshapen and green tubers, which as he sees it is the advantage over a commercial grader which does not do that. Another advantage is the small investment which it represents. Both ways of grading have been used for several years and so are well tried out.—H. L. Cosline, New York.

Speaking of Prolificacy

A Hampshire ewe at Walnut Hal Farms, Kentucky, several years ago gave birth to twins in January, had twins again in September and had a single lamb in the following April.

Milo Jeffres--Lamb Feeder

An Interesting Story of How One Man Makes Money With Winter Lambs

By MARK J. SMITH

APPRECIATION of New York as an agricultural state is increased when we view the wonderfully productive Genesee valley. The provincial feeling recedes when we see Texas steers grazing on Livingston County bluegrass pastures and thousands of western range feeder-lambs on feed in our western New York counties.

A sheep barn large enough to accommodate eighteen hundred feeder lambs, equipped with electric lights and a telephone is quite a novel sight—yet that is what we saw on the farm of Milo A. Jeffres of Perry, New York, who is the largest lamb feeder in that section and probably the most extensive in the State. Last season he fed out three thousand head of lambs.

When the subject of sheep is brought up in the vicinity of Perry, the question is at once asked: "Do you know Milo Jeffres?" In order that I might answer this question in the affirmative, Charles Fausold, the genial Superintendent of Perry's Public Schools, offered to take me out to the feeding plant of this well-known sheepman. We found Mr. Jeffres to be a modest, quiet business man whose business is feeding lambs profitably—a business in which he has been engaged for thirty years.

Mr. Jeffres' barn equipment is built for utility and efficiency in handling a large number of lambs with a minimum of help—in addition to the large barn mentioned above, he has a smaller one built purposely for the business in which he fed five hundred and sixty head last season in one bunch—a third barn is located some distance away. Mr. Jeffres and three other men do the work, and on Sundays he and one other man takes care of twenty-three hundred head. It was explained that the telephone in the barn saves the women at the house steps, as well as the men at the barn. Electric lights make it possible to work the same length of days both summer and winter. Seventy barrel storage tanks hold the water which is pumped from the wells by a windmill.

Light western lambs are preferred for feeding—an average weight of around thirty-eight pounds is considered best, but available lambs are getting heavier from year to year. Black faced lambs are not like for this purpose. The white-faced lambs carrying a considerable amount of Merino blood have the ability to do well when bunched closely in large numbers. The reason that lambs are fed out in preference to the keeping of breeding ewes is that a greater volume is possible and it does away with the need for a lot of pasture. The month of May sees the last of them go.

The Jeffres farm consists of two hundred and forty acres, and practically all of the roughage fed is raised. When the lambs are on full feed of grains, such as are fed on this farm, they do not

consume much hay. Ten carloads of grain were fed last season. The large amount of manure produced is drawn out continuously through the winter—the men were at work when we were there using a plow to break up the manure so that it could be handled easier.

The lambs are put in in September and October—those that are clipped are sold forepart of May, the others go when they are ready—usually start selling in February, and it is desired to get rid of woolled ones by April tenth. Mr. Jeffres said that the first load last season was too heavy, and received a cut of three-quarters of a cent a pound—out of the remainder there were only ten that did not bring top price. It was pointed

salvage feeds have been used. The lambs have done fully as well on salvage wheat as when fed salvage corn, but more salvage corn would be fed if lower in price and more available. When the lambs have been on salvage feed and are given good corn, they turn down the good corn, and vice versa.

The grain is mixed on the barn floor—it then goes into a big bin in the basement of the large barn. The lambs are fed in flat bottom troughs until started nicely and then self feeders are used. Gates are so arranged that the lambs are shut away from hay racks while they are being filled. The barn in which 560 head were fed last year has a self feeder in each corner—feed was hauled on flat racks to this barn and shoveled through the windows into the self feeders. I asked Mr.

Jeffres if he fed much corn fodder and if he liked it as roughage—he replied that he liked it, but that it was hard to keep it from spoiling when put in the barn. He usually has enough corn fodder to last until about the first of January, and prefers to feed it in slatted racks—this year eight acres were drilled. Other roughage fed consists of bean pods, straw, and about eighty tons of hay in 1924. Salt is mixed with the grain. Water is kept before the lambs continuously—float valves shut it off. No condiments are fed except charcoal, which as previously mentioned, they get from the salvage

A Bunch of Fat Lambs in the Stockyards, Ready for Market.

out to us that this was due to the fact that the lambs could be sent when ripe—when a carload was ready they could go. The heavy lambs cannot be held to advantage, and for this reason the lighter lambs are more satisfactory. The lambs are kept in practically all the time. The average gain put on is around thirty pounds per head, the grain cost per pound of gain being approximately six cents.

One of the most unique things about Mr. Jeffres and his operations is that *he is an authority and a specialist in the purchase and feeding of salvage grains*. He says that he will feed any type of feed that will make economical gains. It is always in season for him to buy a few carloads of salvage feeds. Two thousand bushels of cull beans are fed a year. For a long time, in the vicinity around Perry, it was believed that beans were not a good feed for lambs—now they are considered very valuable. Mr. Jeffres is a great believer in salvage grains—he finds that lambs keep healthier and do better than when fed sound grains. He points out that charcoal is recognized as a condiment, and they get enough to benefit them, also the salvage feeds being dry, it does away with buying water, for, as he says, he prefers to get that out of the well. In starting lambs on feed more trouble has been experienced with scours where new corn has been fed than when

grain.

About one thousand head were shorn in 1924. Mr. Jeffres said he thought it paid, but that it made more work in the house. The lambs are bought in the west and when finished go to Jersey City.

The lambs during the feeding season at this famous plant are not neglected in any way—I was told that Mr. Jeffres practically lives with his lambs. This great feeder takes care of his lambs. Mr. Jeffres is a very modest man, but I heard from other sources that his lambs take good care of him.

A Famous Cow Dies

GOOD old Glista Ernestine is dead. She lived to the ripe age of sixteen years. In many respects, Glista was the most famous cow that ever lived. She belonged to the New York State College of Agriculture and through the meetings at the College and the publicity that she received, many farmers all over the East came to know about her.

It is believed that she produced more milk than any cow the world has ever known. Her record is 202,005 pounds of milk and 7,342 pounds of fat. During eight years of her life, she made a record of an average of 17,600 pounds of milk a year.

VOL. 115 January 17, 1925 No. 3

Our Tax Program

- I. The abolition of a direct State tax on property.
- II. No further reduction of income taxes until government expenses are reduced.
- III. Discontinuance of the issuing of tax exempt securities.
- IV. A carefully prepared detailed budget for every government unit from the nation to the county.
- V. Full publicity and information to taxpayers showing the exact purposes, with amounts, for which taxes are spent.
- VI. We are also in favor of:
 1. Larger taxation of personal property.
 2. Gasoline sales tax, and
 3. Taxing billboards along sides of State highways.

Kill a Kow

AMERICAN AGRICULTURIST believes in the future of the dairy business, but success will be more difficult than ever for men who have from one to a dozen cows in their herd which are not paying their keep. We repeat, therefore, that if you own animals of doubtful producing value, we know of no better way by which you can help yourself and the whole dairy industry than by fattening these individuals and either selling or eating them.

The response to our "Kill A Kow" campaign shows that dairymen are thinking of this problem as they never have before. But that thinking should be translated into action. Look over your herd, pick out one whose production is below what it should be, then drop us a line or sign the blank on page 58 telling us that you will get rid of her before March 1st.

Governor Smith's Message

GOVERNOR SMITH'S annual message to the New York State Legislature is one of the best written and most sensible State papers it has been our pleasure to read in some time. In his message, the Governor likens the State to a great business corporation in which the people are the stockholders; the legislature is the board of directors; and the governor is the president. The distinction is made, however, that the State should and does pay particular attention to the welfare or human side of its people. His message is the president's report to the board of directors and

to the stockholders. Through it there runs a spirit of idealism and high-mindedness, looking toward the true welfare and progress of the State's citizens.

AMERICAN AGRICULTURIST is non-partisan in politics. We do not always agree with Governor Smith, but we always admire his great ability and his sincerity of purpose.

"What ever the short-comings," the Governor says, "of representative democratic government may be, it nevertheless remains the best form of government so far devised by the brains and ingenuity of man." * * * * Let us hope in the beginning of the year that it is the will of the Divine Providence that all traces of selfish motives may be removed from our hearts and our minds and that we might enter upon the discharge of our duties with an eye single to the best interests of all the people of the State, whom it is my great honor and high privilege to be permitted to represent. * * * *

"The smoke and dust of political warfare have been swept away. The political rancor of the recent conflict has ceased. * * * * Above all others concerned, I certainly do not believe I should enter upon the duties of the great office to which I have been elected with any partisan purpose, standing alone as I do to represent my party among the elected State officers. What I recommend I believe with all the faith I have in me to be in the best interests of this great State."

The Governor then proceeds to make his report of work accomplished by the State and recommendations of what he thinks should be done in the future.

The report on the State business and the recommendations included a careful statement of the financial condition of the State, together with a discussion of the tax burden. He outlines the State's needs, his recommendations covering water power, forests and agriculture, and his message includes discussions and recommendations in the State's transportation problems, welfare work and the business administration in the State government, with recommendations for reorganization and consolidation of government bureaus and commissions. From time to time we will discuss these suggestions in later issues of AMERICAN AGRICULTURIST.

One of the most important topics emphasized in the message is the millions of State money, much of which is being wasted annually on the Barge Canal. The Governor points out that in the six years beginning with 1919 and ending with 1924, the State has spent a total of \$31,700,077 on the Barge Canal, and in order to maintain it there must be spent during the coming year \$5,252,695 more; and there are pending against the State claims for damage because of the canal, which amount to nearly \$24,000,000.

From all of this waste of money there has been to the people of the State comparatively little return. The Governor figures that since the Barge Canal began operation in 1919 it has carried a yearly average of only 1,640,481 tons; while the old Erie Canal used to average around 5,500,000 tons a year. Governor Smith rightly states that the operation of the Barge Canal is one of the big holes in the State's finances and that there ought to be a careful study made of the canal from which recommendations could be formed that would enable the people of the State to realize on this great investment.

New Jersey Farmers Should Have Square Deal

MANY of the leading farm associations in New Jersey are incensed at the unfair treatment that they and their farmers have received from the New Jersey Board of Fish and Game Commission. We have before in these columns mentioned the serious menace to the crops and orchards of New Jersey, caused by the increasing number of deer.

Recognizing the seriousness of this problem, agricultural leaders representing several of the important farm associations of the State invited

the Game Commission to visit southern New Jersey farms and see for themselves at first hand the deer situation in Atlantic, Cape May, Cumberland and adjacent counties. We understand that the Board flatly refused to even take this one step to inform themselves.

Instance after instance can be cited both in Pennsylvania and New Jersey where thousands of dollars worth of damage have been caused to orchards and to crops and garden truck by depredations of deer, and the question must soon be met as to which people want the most—food production or wild game. It certainly gives those farmers who have suffered losses food for serious thought when the Game Commission refuses even to consider properly this important problem. Is it now time for the farmers on their part to give some consideration as to how boards of this kind can be removed?

An Unfair Embargo on Potatoes

THE British Government has placed an embargo upon potatoes imported from the United States to England and Wales. The claim is made that the reason for the embargo is that there are no potato bugs in England, and that there is danger of importing them from the United States. However, it is very significant that potatoes from Canada are not included in the embargo; and the potato bugs are just as much a nuisance in Canada as they are here.

The real reason, therefore, seems to be a discrimination on the part of the British against potato growers in this country. It comes as a particularly hard blow at this time to producers in New England, New York, Pennsylvania and New Jersey, because we have such a large crop this year and the price is so low. Potatoes in one upstate town were being carried at 38 cents a bushel only a few days ago.

The embargo against potato bugs is simply a subterfuge following out the old discriminating British policy of building up British trade even at the expense of everybody else. American political leaders should take action such as this none too kindly. During the War, the American farmer strained every nerve to feed the world. Since the War, he has continually suffered. If American farming is to endure, and the United States to maintain its agriculture and its other business, it must have at least the same protection in building up its business and its trade that great commercial rivals, like England, are giving theirs.

Home Rule for Prohibition

THE city of Watertown, New York, has taken the enforcement of prohibition into its own hands by the passing of strict regulations and by quick punishment of all violators. It is said that other cities are considering doing the same thing.

Such local action gives the best promise of real enforcement of the Volstead Act. The war against the saloon made little progress until the local option act put the power for fighting booze into the hands of the local authorities.

Eastman's Chestnuts

I AM indebted to a Pennsylvania reader for the following story of the World War;

A captain in the army was taking a good looking girl through a hospital. They came after a time to a cot of a wounded British boy, and the captain told the girl that this boy had killed five Germans and brought in two prisoners.

The girl asked the boy how he did it, and looking up at the girl, he said: "With my hands."

Whereupon the girl was so pleased that she kissed the boy's hand seven times.

In the next cot lay a wounded Yankee boy and the captain told the girl this boy had killed nine Germans and brought in five prisoners.

The girl asked him how he did it, and he looked up at her pretty face and said:

"I BIT 'EM!"

The Wonders of the Sun's Eclipse

The First Time in a Century This Magic Event Comes to A. A. Country

A TOTAL eclipse of the sun—the first in this part of the country since New Englanders saw one in 1806—will take place on January 24, 1925. New York State will be crossed by this eclipse and since it is such an important and wonderful sight, everyone within traveling distance of its path should know when it will occur and where to go to see it.

The central line of the total eclipse enters New York State at Buffalo and passes very near to Warsaw, Watkins, Owego, Binghamton, Ellenville, Newburgh and Fishkill. It leaves the state at Carmel, crossing into Connecticut, where it passes over New Haven, then re-enters New York to cross Long Island and so out to sea.

"Totality" occurs at or shortly after 9 o'clock. Those who possibly can should watch from 7:30 to 10:30, for the advance of the phenomenon and its after-effects are equally

fascinating things about a solar eclipse and there is also a great store of legend and lore about previous experiences. "Old-times" tell us of chickens going to roost in mid-morning, of cows coming home in the unnatural darkness to be milked. These tales are confirmed by writers in scientific journals who state that "the behavior of domestic animals is extremely interesting to observe."

Shadow Moves Rapidly

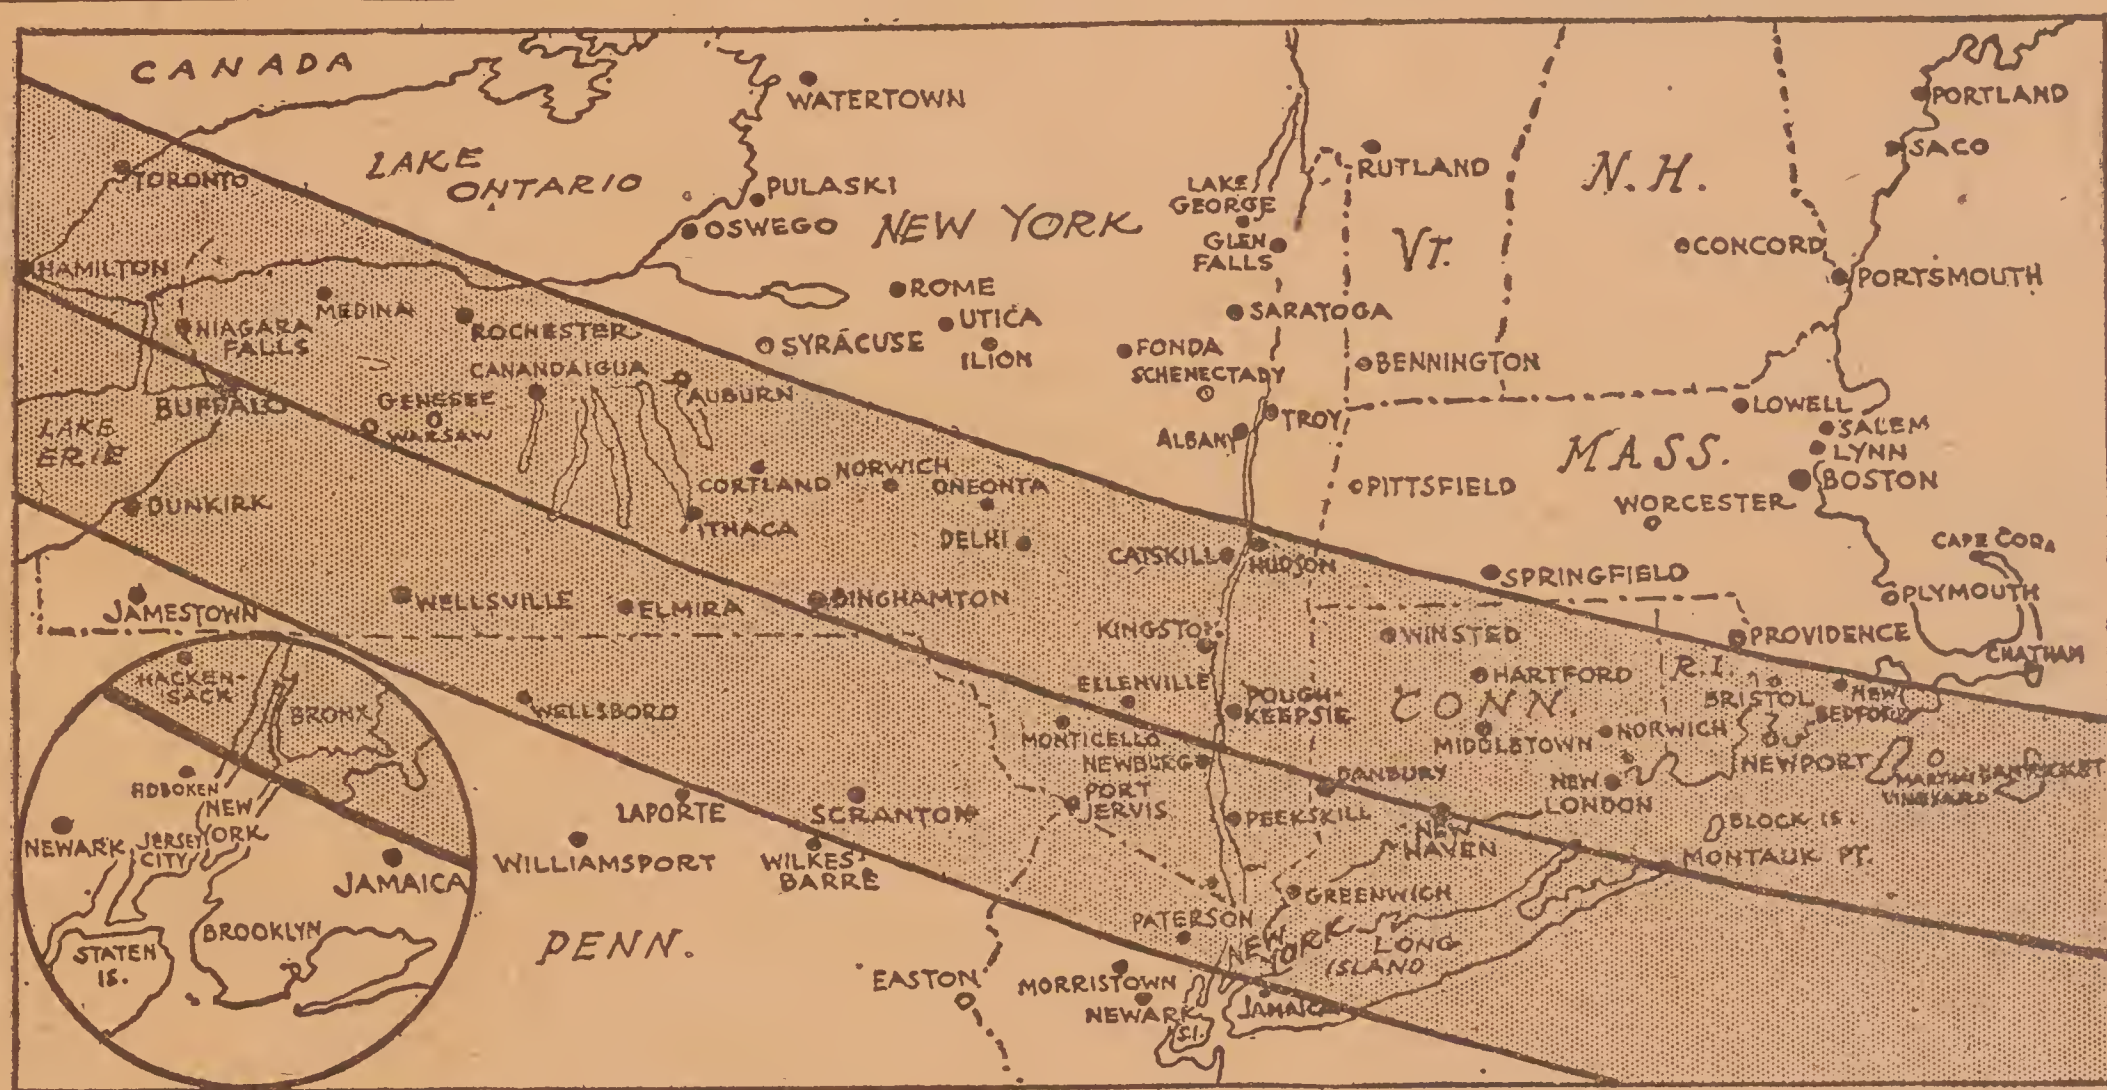

Even when one is prepared for the eclipse, the awe-inspiring features can hardly be anticipated. Prof. Henry Norris Russell says of this spectacular effect:

"By 9 o'clock, when only a narrow crescent of the sun remains in sight, the country will take on a weird appearance. The light from the sun's edge is not merely fainter, but is different in color and quality. All the color values of the landscape become altered—

shines that wonderful fringe of light which the astronomer has named the corona—the crown of the sun—and which he is willing to travel far to observe for the few minutes during which the sun is totally eclipsed, because it is at this time alone that the corona can be seen.

Much Happens in Two Minutes

Observers are urged to be prepared with dark or smoked glasses, for under no circumstances should one look directly at the sun before totality without this protection. If you are familiar with the "starry firmament" you will recognize some of the brighter planets and stars near the sun. Venus, Mercury and Jupiter will be grouped to the west of the sun, while Altair, a first magnitude star, will shine to the northwest and beyond it the brilliant star Vega. But the streamers (a mere million miles or so:) of the corona will be the greatest objects of interest. Both before and after

PATH OF TOTAL ECLIPSE OF THE SUN, FROM GREAT LAKES TO THE SEA

In all cities and towns lying in the area shaded on the map the eclipse of the sun of January 24 next will be total. In all other places shown on the map there will be a partial eclipse. The shadow of the moon moves from west to east across the face of the land. New York City is partly within and partly without the zone of totality. The sweep of the phenomenon is right through American Agriculturist territory.

Courtesy of the New York Sun

interesting. Select a hilltop clear of trees, with nothing toward the southeast which can be the source of smoke or mist. Be sure that the road is kept open if the weather before January 24 is snowy. Select your observation point well in advance and for a few days previous observe the position of the sun at that time in the morning.

What Causes An Eclipse

A total eclipse of the sun is caused by the passage of the moon between the sun and the earth in such a way as to cast a shadow on the earth. Under certain circumstances the eclipse will be total, under others, only partial. During total eclipse, the shadow of the moon at any moment is approximately round. It traverses a long and narrow track across the earth which is called the path of totality. Its width at the maximum is about 168 miles, and in the present case is about 110 miles. Hence every one within a distance of 50 miles of the central line of totality will see the eclipse, but it will not last for the same length of time everywhere. The duration will be greatest at the central line, and will diminish to a few seconds just within the edge of the shadow. Scientists tell us most interesting and

usually in a most uncanny fashion.

"The obscurity steadily grows. At two or three minutes before totality the moon's shadow comes into sight in the west, darkening all the sky and advancing with tremendous speed. On the present occasion, where the sun is low in the sky the shadow will come almost directly downward out of space. The darkening of the western sky should be rapid and very striking.

"This crowns the impression made by the strange coloring and the advancing gloom. No one who has seen it can doubt the ancient tales of battles stopped in their highest heat by an eclipse. It really seems as if the sun had gone out, even that the world is coming to an end.

"But the precious seconds of totality are too few to spend in alarm. The moment that the darkness sets in all eyes must turn toward the vanished sun. In a few seconds one realizes that it is not by any means pitch dark, but much more like a moonlight night. Only a few of the brighter stars can be seen and there is no difficulty in finding one's way about. The sky is not black, but a deep slaty blue. In it hangs the disk of the moon, slaty-blue like the sky, and around the moon's edge

totality, shadow bands will play over white surfaces such as snowy fields and roads. To quote Dr. Russell again:

"All too soon the short totality, lasting hardly more than two minutes at the most, will come to an end; and now is the time to watch for things which are better left unlooked at as the sun goes into the shadow, lest the observer's eyes be dazzled. Just before the end of totality, the inner corona brightens preceptibly; then something far brighter, shining with a white, steady light, appears. This is not the sun itself, but its hot lower atmosphere—as becomes clear a second or two later, when the sun's surface, incomparably more brilliant, bursts forth. The air fills with light, drowning out the outer corona at once and the inner corona after a minute or so. The great spectacle is over."

There will not be another total eclipse until 2024. So unless you expect to live till then, do not miss this one!

(Eclipse coupons, upon which amateurs can record observations which may be of great value and interest to scientists, may be obtained from the Scientific American, 233 Broadway, New York City. There are seven simple questions to be answered, and fortunately situated amateurs may happen to collect data which trained observers miss.)

Bird's-eye View of the McCormick-Deering Tractor

—Just about the view the operator has as he steps up on the platform and takes the seat. One day he may be sighting along the belt to the belt machine and the next day steering across his fields.

NOTICE the clear view ahead, the handy controls. Make note of the roomy platform, the wide protective fenders, the comfortable seat, the auto-type steering, the tool box, the brakes, the removable lugs, the drawbar with its range of adjustment, the wide belt pulley and its sensible location.

Then there are the many McCormick-Deering features you cannot see here—such as the crankshaft and main ball bearings guaranteed for life, the removable cylinders, the unit main frame, the ball and roller bearings at 28 points, the throttle governor, the perfected lubrication, etc. Everything is there, on top or inside. Remember this tractor reaches the farm complete with *all* the features named above.

Note the little round plate in the center of the platform. That is where the Power Take-Off attaches—the great new feature through which you can run the mechanism of grain binders, corn pickers, etc., by power conveyed from the tractor through a revolving shaft. One of the greatest of recent tractor improvements.

Write us for full illustrated catalog about the McCormick-Deering Tractor. Use your tractor for winter belt work and be well acquainted with it by spring's work.

MCCORMICK-DEERING TRACTORS

Controlling Shot-Hole Borers In Apple Trees

We have some apple trees that are full of little holes. They look as though some one had fired a charge of birdshot into them, only the holes are on all sides of the limbs. Must be some kind of insect. What can we do to save the tree?—G. L. B., New York.

UNDoubtedly your trees are infested with bark beetles or shot-borers. These insects are little hard-shelled beetles that bore through the bark and live in the cambium layer underneath the bark. Only in cases where these beetles are excessively abundant do they attack healthy and vigorous trees. Neither do they live and multiply in dead wood. Wood that is unhealthy and in a dying state is an ideal place for them to develop. Where there is an accumulation of this kind of wood you will find these insects developing in great numbers. When their home supply of food is exhausted they will migrate and it is then that they may attack healthy trees.

Bred in Broken and Dead Limbs

At first they will make no impression on these healthy trees. However, if their attack is continued they will gradually weaken the tree with the result that it will become a natural breeding place for them, such as broken limbs or trees weakened by rabbit and mouse injury.

The first thing to do, therefore, is to remove any possible breeding places that may exist in the vicinity. The next thing to do is to prune or cut out those parts of the tree that are most seriously infested. Burn these pruned parts as well as those that have acted as the original breeding places. Burning is the only sure way of getting rid of them.

To stimulate growth will help restore the tree to its normal healthy condition, which will enable the tree to make healthy tissue faster than the beetles can destroy it.

Whitewash as a Deterrent

A thin coat of whitewash should be applied three times a year, once early in the spring, once in the summer and again in the fall. If the whitewash is of thin consistency and is applied as a spray, each seasonal application should be doubled being applied a few days apart. It is better to apply it in a thick condition with a brush. The addition of a handful of salt to each pail of whitewash will add to the sticking powers of the wash, making it much more adhesive.

It is also advisable to add about a pint of crude cresylic acid or crude carbolic acid to every ten gallons of whitewash. This increases the insecticidal powers of the application.

The whitewash will not kill all of the insects that are harboring in the trees. However, if a fairly solid coat is maintained on the bark, it will prevent to a large extent the development of any new colonies through extended egg-laying. By eliminating the laying of additional eggs the tree will be able to regain strength with the help of cultivation and fertilization.

Farm Taxes in Pennsylvania

This letter indicates how Pennsylvania farmers feel on the tax program:

"In regard to taxes, something must be done. Our taxes are so high we will have to lease the farm. I live in Pennsylvania and the taxes are so high on my farm of 300 acres I cannot rent it for taxes and keep the buildings in repair. They tax every cow and old horse you have and it is impossible to make enough to keep even. I never object to paying an income tax. I would only be too glad if I could realize enough on my farm so I could pay it. I know of several neighbors who have to leave the only homes they have because of high taxes."—W. J. H., Pennsylvania.

\$100 Cash Prize

For suggesting a name for this new cabbage, the best all around variety ever produced. Sample Packet Free. Contest for this Cash Prize open to anyone having a garden—but only one person to the family. Our New Garden and Plant Guide fully explains the conditions of this contest. Write for it today.

FOR 10c we will mail, postpaid, one packet each of new 60 day Tomato, Princess Radish, Self Growing Celery, Early Arrow-Head Cabbage, Fullerton Market Lettuce and 12 varieties choice Flower seeds. Guaranteed to please. Every gardener and planter should try this wonderful collection of Northern Grown Seeds.

Don't fail to get our New Garden and Plant Guide. Copy mailed free; tells all about the Big Cash Prize. Write today. Great Northern Seed Co., Dept. 601 Rockford, Illinois

GOOD SEEDS

Grown From Select Stock—None Better—55 years selling good seeds to satisfied customers. Prices below all others. Extra lot free in all orders I fill. Big free catalogue has over 700 pictures of vegetables and flowers. Send your and neighbors' addresses. R. H. SHUMWAY, Rockford, Ill.

Keep Biddy's Milk Warm

And Questions on Poultry Practice

A QUESTION came to us the other day from one of our readers who wanted to know if it is all right to feed snow to hens. It seems the water haul from the well to the poultry house in this subscriber's case is a long one. During heavy snow storms it is quite a task to get water to the hens and with so much snow around the building it is perfectly clean, it occurred to the inquirer that feeding the water in frozen form would not be a bad idea.

There are poultrymen who have used snow in place of drinking water. It is their practice to go outside the house with a couple of empty pails, fill them with clean snow and leave them in the house during the night. We also know of some dairymen who find it too much trouble to carry water to their cows and therefore they take an axe, release the cows from the stanchions, drive the cows to the nearby brook, cut holes in the ice and let the cows help themselves. You can imagine how much milk cows will give when they get ice water once

This is a cross-section of the warm water device. A represents the insulating packing between the tub and the pail. B represents the metal apron to keep moisture out of the insulating material. C represents the perch for the hens to stand on while drinking.

a day, drawn through the holes in the ice. Cows watered this way are just about as productive as hens that are watered with snow. You and I would find it pretty difficult to work all day in the woods with only ice water to drink. And not until a man looks upon his cows, horses, sheep, hogs and poultry in this light, will he get anything like normal work out of them.

A Modified Fireless Cooker

Hens do not consume so much water but what a couple of trips will supply their needs. But then comes the problem of water freezing in the house during the day time. If the house is properly constructed and properly ventilated, there is no reason for the water freezing during the day except under extreme conditions. If enough interest is shown in the hens there are plenty of contrivances which with ordinary precautions will keep the water from freezing not only during the day, but the night as well.

Every one has heard of a fireless cooker and how it is made. The home bureaus have been talking about and demonstrating fireless cookers for a long time. The principle of the fireless cooker can be applied to the hen's water trough and can be made to work extremely well. D. C. Kenneth of the poultry department at the Ohio Experiment Station has devised a simple and inexpensive contrivance for keeping water or skim milk warm for the laying hens in cold weather. He simply applies the principle of the fireless cooker.

How It Is Made

His contrivance consists of a 10 quart pail, placed in a candy bucket or butter tub. The size of the pail and the tub should be such as to allow a couple of inches between the two beneath and around the side for insulation when the pail is placed inside the tub. This space between the pail and tub is packed very tightly with straw or filled with sawdust. The top of the pail is so placed in the tub that the top of the pail will be an inch or so above the upper edge of the tub when a piece of tin or galvanized iron can be fitted beneath the rim of the pail to extend over the edge of

the tub to which it is securely nailed. This metal strip or collar should slope downward to act as an apron in order to keep waste water or splashing from wetting the insulation. A board 6x8 inches wide is placed around the tub as a running board for the hens to stand on while drinking the water.

The water is placed in the trough quite warm but not scalding hot. It will hold a satisfactory temperature about all day. It may be a good idea to replenish it with additional hot water at noon time.

We have seen contrivances such as this in operation. One device in particular was quite similar to this except in place of a pail, the water trough consisted of a more shallow pan set within a pail. In the bottom of the pail a hot brick was placed wrapped in a burlap bag. This held the heat for some time.

More Elaborate Appliances for Lighted Hen Houses

A device of this type is perfectly satisfactory for the average farm flock. It is hardly sufficient however, for the man who uses artificial illumination. In his case the birds are usually up quite early in the morning and need water before it is convenient for the poultryman to be on hand. There are numerous devices on the market for keeping water from freezing. These poultry appliances have now been perfected to a point where they are now reasonably safe and where a man follows the direction of the manufacturer and uses common sense in locating the device, there is practically no danger of an unfortunate experience. We have all heard of poultrymen who have tried to make their own water heating devices by using kerosene lamps. They not only went up in smoke themselves, but took the entire hen house and flock along. Even these devices would have worked had reasonable precautions been taken. We know of one poultryman who uses his brooder stove to great advantage. He has an ordinary wash boiler on top of the brooder stove to which he has connected a couple of small pipes that run to the water fountain. Just enough fire is maintained to keep the water in the boiler lukewarm which circulates after the same manner as the water in cooling devices in Ford cars.

His brooder stove is located in a separate room in one end of the poultry house where there is no danger of fire from litter being thrown up against it. The heat pipes go through thin partitions. Of course this device is a little elaborate but he has several hundred certified layers and he finds it worth his while, especially so when strictly fresh eggs in his locality are worth 76 to 80 cents a dozen. A little effort and forethought certainly pays under those conditions.

Keep Breeders Vigorous

I have a flock of 17 or 18 Barred Rock pullets that I intend using for breeders. Recently a visitor came to the farm and said that in his opinion we should take the mash away from our breeders. What do you think of this advice?—New York Reader.

Under normal conditions we can see no justification for taking the mash away from laying hens. There is only one way to identify your desirable breeders from the egg producing standpoint and that is by having them show how they produce. You cannot get hens to lay unless you feed them and unless they lay you do not know their producing capacity.

There may be some unusual condition that we do not know about that would influence a recommendation of this kind. For instance, your hens may be so fat that they are not in proper physical condition to lay eggs from which vigorous chicks will hatch. Breeders must be the picture of health and vigor. They must be active and on the go. It may be that your breeders have been getting so much food with

(Continued on page 65)

Fight disease— increase hatchability and fertility

*These are the problems every
poultryman must solve*

THE three problems outlined above—these must be faced in every part of the "poultry empire."

That is why thousands of successful poultrymen in all sections are now using Fleischmann's Pure Dry Yeast. When Yeast, dissolved in water or milk, is added in small amounts to the regular feed, it begins at once to ferment.

This fermentation breaks down the proteins in the ration and prepares more of them for rapid absorption. The Yeast keeps the birds in good condition—increases their vigor—makes them resistant to ordinary poultry diseases. The increased vitality of the breeding birds is reflected in turn in higher fertility and hatchability of eggs, sturdier chicks, and earlier developing stock.

NOW—this special package for \$1

So you can thoroughly test for yourself the amazing results of Fleischmann's Pure Dry Yeast, a special trial package is now ready. Enough Yeast to ferment the feed for 100 hens for 4 weeks! Your dealer should be able to supply you. If not, send today—enclose check, cash or money order with the coupon below. (\$1.20 in Canada, Cuba, Porto Rico and other countries.)

"I think that the regular use of Fleischmann's Pure Dry Yeast has done a great deal to prevent sickness," writes F. Gibson Stickler, of Hallam, Pa. "I have never had a healthier-looking flock of birds than at present."

"I have been feeding Fleischmann's Pure Dry Yeast for about a year now," writes Frank W. Sault, of St. Albans, Vt., president of the Vt. R. I. Red Club. "Last winter had a better egg yield and better fertility in my hatching eggs, with very vigorous chicks."

"I used Fleischmann's Pure Dry Yeast in raising 3000 baby chicks with great success, last spring," writes E. J. Rubright, of South Sea, N. J. "The mortality was very low with practically no cases of diarrhea."

Double your Milk Profit— by building Health and Vigor

Did you ever think how little added milk it would take to actually double your net milk profit?

Competent authorities agree that on the average, only 10% added yield would double the net return from dairying.

See what a chance you have, then, to realize real profits by giving more thought to safe ways of increasing the milk flow.

Make Cows Thrive on Winter Feeds

The Kow-Kare way is safe, reliable and sure. Kow-Kare is not a stock food. It is a medicine-tonic that invigorates the milk-making organs. It enables the cow to assimilate the rough, dry winter feeds with the same ease and milk-making effect as these same organs, unassisted can handle green pasturage in summer.

Kow-Kare is scientifically designed to act directly on the digestive and genital organs. It not only stimulates, but builds natural, permanent vigor into the organs that control the milk yield. A tablespoonful twice a day, one week out of each month is the usual feeding of Kow-Kare. Once tried, you are sure to become a regular user of this great invigorator.

Feed dealers, general stores and druggists sell Kow-Kare—in \$1.25 and 65c sizes. Order direct if your dealer is not supplied.

DAIRY ASSOCIATION CO., Inc.
Makers of Bag Balm, Garget Remedy, Horse Comfort
LYNDONVILLE, VT.

Banish Cow Diseases
Barrenness, Abortion, Retained Afterbirth, Scours, Garget, Milk Fever, Lost Appetite, etc., all result from an impoverished condition of the digestive and genital organs. In the successful treatment of these diseases Kow-Kare has a quarter-century record of success.

Write today for our free book, "The Home Cow Doctor." Thousands of dairymen would not be without it.

Famous Pennsylvania "Ton Litter" Sow to be at Farm Show

PIG exhibits at the Ninth Annual State Farm Products Show at Harrisburg, January 19 to 23, will be led by Petroleum Girl, Chester White sow, called the "world's record pork machine" by Keystone swinemmen.

Evidence shows that Petroleum Girl has been a national leader among ton litter producers for the past two years. In 1923 she produced the heaviest Chester White litter in the county, one of 12 pigs weighing 2,875 pounds at 180 days of age. Last spring she farrowed 17 pigs and raised 15 of them to weigh 3,461 pounds at six months of age. This litter not only led all ton litters of all breeds in the Keystone State for weight, but was the heaviest Chester White litter in the United States and the heaviest ton litter of all breeds raised on one sow in the country in 1924, according to H. H. Havner, animal husbandry extension specialist of Pennsylvania State College.

Altogether, Petroleum Girl has farrowed six litters, ranging from 12 to 18 pigs in number, during the past three years of her busy 4-year existence on the farm of T. M. Strong, of Blairsville, Indiana county. Three of these developed into ton litters, and the weight was not taken on the two others at six months of age. This past fall, Petroleum Girl farrowed her largest family to date, 18 pigs.

Caked Udder

I have a cow that freshened recently and seem to be having trouble in removing the caking from her bag.

Have used salve recommended for that purpose, massaging the bag twice daily after I strip her out. It has taken out a good share of the caking but now it seems to be at a standstill.

Can you recommend anything that would help me remove it entirely? Thought possibly there is something I could give her internally for her blood that would help. She has good appetite and seems to be in good health otherwise. She is a good cow and I do not like to beef her unless I am forced to do it.—A. W. G., Seneca County, N. Y.

FROM the information you have given it would lead us to infer that your animal is suffering from Mammitis.

Inflammation of the mammary gland is frequent in the cow as might be expected from the fact that this animal is a milk producing machine. This disease is of the highest importance as affecting the yield of milk, rather than the life of the animal.

This disease is mostly seen in young animals, sometimes it starts right after calving, but in other cases comes on a short time after.

Treatment consists in giving a cathartic of oils or salts and the animal should be allowed nitre in the drinking water, aconite (ten to twenty drops, three times a day) to counteract the systemic excitement.

Local treatment comprises removal of all milk at regular intervals either by milking or by the use of the teat syphon, next foment freely with hot water, and afterward apply a linseed poultice, containing two ounces of belladonna to the whole gland, supporting it and the weight of the organ, by a wide bandage passed over the loins.

* * *

What to do for Ringworm

Will you kindly tell me what ails my cow? The following is the description: My cow some two weeks back lost all at once a bunch of hair and since then she is continually losing them in bunches. She always rubs against a tree and licks the spots sore. A neighbor told me she was lousy but I cannot see any. Will you kindly tell me what it is and what to do for my cow?—H. R., Greene County, N. C.

FROM the description you have given, it would lead us to infer that the animal has ringworm.

Go to your druggist and procure Tincture of Iodine, and paint spots, once each day with the iodine. This will kill the parasite that causes the ringworm.

Keep the animal away from the other animals, as this condition is contagious.

BROOKFIELD

Champion Laying
Business Breeds

Are World's Champion Layers. Imported direct from England. Brookfield baby chicks bred from 1200 of these specially culled, heavy laying hens—fully accredited, trapped and tested by Agglutination test and pronounced free from Bacillary White Diarrhoea. The Big Royal Brooder

Agents wanted in open territory Write today

The Royal, with the largest fire pot of any brooder on the market at our price, holds more fuel and burns either hard or soft coal successfully. The chicks are cozy, happy and growing under a Royal, when the fire would be out in a small stove brooder. The hover is extra heavy, wirebound and one piece. Five inch flue pipe, and combustion chamber four times as large as other standard stoves. Both check and direct draft are automatically controlled. The grate is large and extra heavy. Fire-pot has straight sides; soft coal will not clog.

Your dealer should have a full line of Royal Poultry supplies. We make brooders, leg bands, chick feeders and waterers, non-freeze fountains and the other supplies needed on the poultry farm. If your dealer can't supply you, send your order direct.
ROYAL MFG. COMPANY, Dept 14, Toledo, Ohio

Cut Milk Production Costs with a New Harder Silo

Twelve ordinary grade cows at the Illinois Experiment Station averaged 8,313 lbs. milk in one year, without grain. They were fed on silage and alfalfa. Prof. Savage advises Eastern dairymen to cut production costs by growing more silage and legumes and buying fewer concentrates.

In order to help carry out this money-saving, profit-making plan, we offer the improved Harder Silo with the patented Harder-Victor Front on very easy terms. After a small first payment, your cows will take care of the remaining payments through greater production and lower feed cost. You simply cannot afford to go without a silo when you can get a genuine Harder on such easy terms. Even if you have one silo, you probably need another.

Let Us Send You "Saving with Silos"

We haven't room here to explain all the good points of this strictly high-grade Silo, but we'll gladly send you "Saving with Silos", free. It explains the scientific principles of silage making and illustrates the details of Harder construction. Ask also for particulars of our easy-payment plan that makes a Harder pay for itself.

HARDER MFG. CORP., Box F Cobleskill, N. Y.

HARDER SILOS
Are Easier to Buy

In Search of a Prepotent Herd Sire

HENRY MORGENTHAU, JR.

HAVING just finished a six months' search for a herd sire, our Editor felt the experience gained would be of interest to our readers.

I never knew that the phrase prepotent herd sire could be interpreted in so many ways until I recently advertised that I was in the market for one. Back in 1916 I was won over to the purebred idea by Dr. C. W. Larson, now Chief of the Dairy Division of the Department of Agriculture at Washington. It was also through Dr. Larson that I was taught the value of a prepotent herd sire. The interpretation that I gained at that time was that a prepotent herd sire was one whose daughters' production averaged greater than the production of their dams. This simple rule of the thumb is really the acid test that should be made to all aged purebred bulls.

Unfortunately, most purebred bulls are sent to the butcher before they are old enough for their owner to really know just how their daughters are going to test out. It is hard to tell much before a bull is eight whether he is prepotent or not, and by that age most bulls have been disposed of. I am told that a remarkably small per cent prove to be prepotent, so when a really good one has been sent to the shambles before his true value is known, his loss is felt all the more.

A Long Search, But Worth While

In 1916, after a search of six months, I was fortunate in finding DUTCHLAND COLANTHA SIR INKA who came up to all the requirements. His biggest drawback was his age—twelve years. This bull had been for sale for two years, but no one would buy him, because he had the reputation of being a non-breeder. I wanted to buy him very much on account of the wonderfully uniform high-production of his daughters, their well-formed udders, square rumps and good top-line. I hesitated a long while before buying "Old Dutch," as he was affectionately known, because of his reputation as a non-breeder, but finally on the assurance of his owner, R. R. Sadd, I bought him. My judgment in believing in Mr. Sadd proved to be correct because the bull lived to be 16 and was active up to a few months before he died.

A Herd of Considerable Merit

I own 43 daughters of "Old Dutch." Every single Dutch daughter has proven to be a good one. As two year old, they have all milked from 50 to 75 lbs. a day, and have averaged over twenty pounds of butter in a week. His 36 tested yearly record daughters average 15,979 lbs of milk and 694 lbs of butter. These may not be world records, but there are very few bulls in the country of any breed that can equal that production. The best "Dutch" daughter that we have developed so far is FISH-KILL DICHTER COLANTHA INKA. This heifer, as a senior, two-year old, produced in 305 days, 15,486 lbs. of milk, containing 679 lbs. of butter. This record was made under what is now called Class "C"—which permits a cow to milk four times a day for the first 45 days she is on test, and two times a day for the balance of the period. This record, I believe, is a world's record for a pure bred Holstein in this classification.

Now, the point I want to prove is that the unusual success we have had with the daughters of "Old Dutch" was not mere luck. The cows just had to respond to good treatment because the prepotency was there.

I have not always been so fortunate in my purchases or breeding operations. A little less than two years ago, I bought seventeen young cows at a good

(Continued on page 57)

Split Silk of Edgmoor, Twice Grand Champion, Brockton Fair, Brockton, Mass., Owned by Atamanssit Farms.

Grade Cows or Grand Champions

Whether you are developing Grand Champions, keeping pure bred or grade cows for milk, cream or butter production, the following letter from Atamanssit Farms will interest you. It brings out three important points in dairying all tending to greater profit for the man who keeps cows, i. e.

Developing better young stock—
Producing more milk—
Feeding test cows for higher records.

Atamanssit Farms, East Falmouth, Mass.

The Quaker Oats Co., Chicago, Ill.

November 15, 1924

Dear Sirs—In regard to the Sugared Schumacher I must say the results from its use are very gratifying. I admire its remarkable palatability. In a herd as large as Atamanssit there would usually be several animals that do not care for a feed but I have yet to see one that is not keen for Sugared Schumacher. We have 30 yearly heifers, which due to the very dry weather, came in from pasture quite thin this fall. We have fed them Sugared Schumacher alone with silage and clover hay and the way they have picked up is a splendid testimonial to your feed—much better than I could write.

We have used Sugared Schumacher according to your directions for our milking herd and it has proven to be more satisfactory than any other feed we have used. It is the last three months on a test cow's record that count. They are pretty well filled up then and they must relish their feed or they will not keep going. For that reason I think Sugared Schumacher is the ideal carbohydrate basis for the test ration as it keeps the cows at maximum production right to the end of the test period.

—Yours very truly, HORACE M. CLARK, Herdsman in charge.

There are Many Good Reasons Why Sugared Schumacher Feed Produces Such Gratifying Results. Mr. Clark Touches on Three of Them:

FIRST the way the 30 heifers "picked up" in flesh and vigor—a result of the right kind of carbohydrates which puts animals in tip top condition.

SECOND the way the "milking herd" proved it to be "more satisfactory than any other we have used" — showing that it meets the need of the milch cow ideally and helps her to produce MORE MILK.

THIRD its great PALATABILITY as proved on their test cows by keeping them EATING with relish and up to maximum production right to the end of the test period.

Surely these ARE sufficient reasons for any owner of cows—grade or grand champions to decide to try Sugared Schumacher Feed. But these are not all. It keeps cows healthy—satisfied and in good flesh. It is an ideal maintenance ration and when fed with **Boss Dairy Ration** with its 24% protein content, or any other good protein concentrate, you have a ration which day in and year out is the most economical and profitable from every standpoint. Also fine for hogs, horses, sheep and cattle. A hint to the wise—try it. Your dealer can supply you, if not, write us.

New York Farm News

January Conditions on Dairy Farms

HOLIDAY weather has been a little severe and has taken the fodder rather fast. A little snow has helped to prevent deep freezing thus far but we are a little short on moisture and springs are rather low. It happens occasionally that we get a winter with short water supply for stock. We hope that this is not to be one of these. Cabbages have been fed largely to cows this fall as the price has for the most part been too small to make sale advisable. Even now there are some being fed since a part of the dairymen put a part of the crop down in some sheltered spot where they might be taken up for later feeding. With a little grain and some hay, cabbage makes a useful feed for producing milk.

There is the lowest feeding of grain that we have had for many years. This is brought about by the low prices for milk and the high price for grain feeds. Occasionally a man is feeding about as usual but not the average of our farmers. My own idea is that if one has good cows they better be fed well even under the present conditions. However, there are a lot of farmers who cannot see how the taxes are to be paid to say nothing of paying a big feed bill. Poultry keepers report better results than they do for the cows. Many keep both cows and hens. Some say that it takes about all they can make on poultry to pay the up-keep of the cows.

Milk Supply Short

Milk plant managers complain that they do not get as much milk as they want. They raise the question as to the reason. It is price but it may be that more milk will be had before long without much advance in price. We may get around \$2.25 net including certificates for January and that may continue somewhat longer, but one has to figure pretty closely if he gets his feed under \$2.50 and some are paying more than that. We used to figure that it didn't pay to feed grain unless we got as much by the hundred for milk as we paid for feed. I repeat that it doesn't pay to scrimp a good cow and it doesn't pay to keep a poor one. Let's join the AMERICAN AGRICULTURIST club and get rid of the poor cow. For one I have no worry over the present shortage of milk. There is enough for all real needs and we are inclined to make too much usually. It will happen again.

It happens that I live near the important points in Clover Farms territory, one of the plants being quite near and a still more important one not so far away. When the Dairymen's League bought Clover Farms the milk was diverted elsewhere almost on the moment although it might have been left in the plant at the same old price for the month. It was not to be pooled until January. That did not satisfy. Producers were mad. Some held their grievance against the League, some denounced Clover Farms for selling out and others blamed both. They declared that they would not patronize the League and most of them didn't. In the course of time some of that vengeance will wear off but not all of it probably. At the moment it looks as though the up-state Clover Farms plants will not be run at capacity for some time.

After Class One Market

However, poolers say that they are not greatly concerned at that. What they were after is the class one market and there are only two ways to get it. It must be purchased or stolen; no one will give it to them. If they buy it and do not permit any one to steal it from

them they think they will be ahead. It is also now announced that another large fluid concern is coming with the League by contract on the first of February. All of these recent changes it is said will bring a large class one market with better results in price to members and savings in operation of plants. Some plants may be closed. Therefore of the Clover Farms country plants are part or all of them closed it is argued that the purchase is well worth while in case the city business is held.
—H. H. LYON.

Along the Southern Tier

THE Commissioner of Foods and Markets of New York State has issued a quarantine against Broome County dogs for the term of one year from Dec. 26, 1924. Under the terms of this order all dogs must be kept securely confined between sunset and one hour after sunrise each day. This action was taken by request of the Board of Supervisors, because of serious losses to the sheep men of the County. One man is said to have sustained a loss of \$400 to his flock. It is supposed that one or more officers will be appointed to see that the Commissioner's order is obeyed.

The continued cold weather has made it possible to put in ice of good thickness and of fine quality almost before the new year began.

The farm house of John Tartanian in the township of Maine, Broome County, was entirely destroyed by fire in the daytime on the 20th of December, 1924. A high wind was blowing, and it is supposed that a very hot stove caused the flames to find their way through holes in a poor chimney or pipe. Mr. Tartanian is an Armenian. For a long time he had been saving up money to bring his mother and some other friends from the old country, only to see his dreams vanish for the present in smoke.

Hay is slow of sale and low in price, little moving at \$15 a ton. With the colder weather, however, some more activity is shown.

Potatoes are quite a drug on the local market. Grocers say they can get all they want at seventy cents a bushel.

By agreement between milk producers and dealers the price is to remain through the month of January at the same figure as prevailed in December, 1924. The farmers receive 7 cents a quart for milk retailing at 13 cents.

A number of farm homes on the road from Binghamton to Kattellville are being wired for electric lights.—E. L. V.

The third township in Columbia County has been started in the local T. B. Eradication campaign. Last week finished up the work of the initial testing in the town of Stuyvesant and the second test in the town of Kinderhook, and activities were transferred to the township of Hillsdale.

The first Tuberculin tests applied in the township of Hillsdale last week have been watched with interest in order to see what the reaction would be in this section of the upper Harlem Valley where little or no testing has been done. On the first hundred cattle tested, eighty-three reacted. If all of the territory is like that it will take a lot of indemnity to clean up the New York City supply.

A long term series of studies on contagious abortion on various herds in the county have been started by the Columbia County Farm Bureau in cooperation with the State College at Ithaca. Dairymen are watching with keen interest as there have been severe epidemics in the past in the county. This long term observation in large herds will determine to a large extent what can be done in the control of the trouble under actual production conditions.
—D. V. RIVENBURGH.

THIS winter, keep your horses fit and sound with Gombault's Caustic Balsam. Known for 41 years as a reliable and effective veterinary remedy for Spavin, Capped Hock, Curb, Splint, Grease, Thoroughpin, Quittor, Wind Gall, Poll Evil, Laryngitis, Fistula, Sprains, Barb Wire Cuts, Calk Wounds.

Reviewing the Latest Eastern Markets and Prices

MILK PRICES

THE Dairymen's League Cooperative Association announces the following prices that dealers will pay the League during the month of January for milk testing 3% in the basic zone of 201 to 210 miles from New York City. It is to be understood, of course, that the prices mentioned below are not received by the farmer, but go into the pool. They represent the prices dealers pay to the League.

Class 1 Fluid milk	\$3.07
Class 2A Fluid cream	2.10
Class 2B Ice cream	2.25
Class 2C Soft cheese	2.15
Class 3A Evaporated whole milk	

Cond. whole milk	1.90
Class 3B Whole milk powder	1.85
Class 3C Hard cheese other than	

American

Class 4 prices will be based on butter and American cheese quotations on the New York market.

Sheffield Producers

The Sheffield Farms Producers announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$3.07
Class 2	2.20
Class 3	1.75

Class 4 prices determined by butter and cheese quotations on the New York market.

Non Pool Cooperative

The Non-Pooling Dairymen's Cooperative announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$2.80
Class 2	2.20
Class 3A	1.80
Class 3B	11.75

Interstate Producers

The New York State Milk Producers Association (Philadelphia Price Plan), announce the receiving station prices of the price to the farmer in the 201 to 210-mile zone from Philadelphia for 3% milk is \$2.19. In the 101 to 110 mile-zone, the price is \$2.29.

BUTTER TAKES A DROP

The snowstorm that visited New York City on January 2 was responsible for the turn downward in the butter market. The traffic in the downtown section was practically knocked off its feet and little or no business was done on Friday or Saturday. By the 5th and 6th downtown traffic was beginning to recover but the uptown sections of the city were still seriously crippled with the result that little or no business was done. Trucking has been so difficult that buyers have been inclined to use up their holdings to the very last tub before coming downtown into the market for fresh supplies. This inclination to keep away from the market has resulted in heavy accumulations of fresh goods which, with the large amount of business that is being done in storage butter has been responsible for lower prices. The inability to reduce the accumulations caused considerable pressure to sell with the consequent weak feeling. The downward trend has been responsible for speculators holding off as well as jobbers and distributors, as long as possible to get the advantage of lower prices. This cannot last very long because the stores have got to replenish their supplies and undoubtedly we will see an improvement by the time next week's paper reaches our subscribers. Creamery scoring 93 is now 43c to 44c, where it was 45½c to 46c. 92 score butter is 43c, whereas it has been 45c.

CHEESE STILL FIRM

The cheese market continues in its firm tone and business moves along with considerable activity. Prices have advanced above those of last week to the extent of one half a cent a pound. Business is moving along fast enough so that there is a good deal of confidence in the market and in the situation as a whole. There is very little fresh State whole milk cheese coming in and most of it is closing out at 24½ to 25½c. Fancy whole milk state flats are worth 25 to 25½ while average runs vary around 23½ to 24½. Fresh fancy flats are bringing from 23½ to 24c while average runs are 23c. Undergrades of fresh and held goods are bringing anywhere from 19 to 22½c. A week ago 18c was the lowest point in the market.

EGGS BARELY STEADY

The snowstorm also had its effect on the egg market. Fancy nearby whites have been especially troublesome. Many receivers report an accumulation of these higher grades. They have been responsible for the market becoming a little less steady, although trading is generally at unchanged prices. The market is not nearly as touchy on intermediate grades. These are clearing well and made no serious accumulation. The high priced lines are not in any too strong a position. Fancy Jersey and other nearby hennery whites that are well graded and closely selected are still worth 69 to 70c. Other marks that grade from first to extras vary from 62 to 68c. Nearby gathered whites are bringing from 62 to 65c, with undergrades a cent or 2 lower. Nearby white intermediates are worth practically the same as hennery whites firsts, namely 62 to 64c, while pullets are worth anywhere from 54 to 60c. Fancy brown eggs are enjoying almost

the same market as whites, marks grading fancy bringing anywhere from 68 to 69c.

ACTIVE DEMAND FOR LIVE FOWLS

The market has been voicing a real active demand for live fowls. The demand is such that in many instances the fowl market is being used to force the sale of chickens which class of goods is dragging heavily and moving very slowly. The embargo is still on and not enough poultry is coming in to supply the demand and as a result the few express fowls that are being received work out quickly. Express chickens, however, are meeting a very slow sale.

Fowls that are fancy are selling readily at 37 to 38c while average run fowls will bring 35c and Leghorns are worth 27 to 31c. Express chickens are in the neighborhood of 28 to 30c. Express ducks and geese are still meeting a steady market with the former bringing 42c a pound and geese 35. Fancy Jersey farm fattened geese are worth a 5 cent premium. Turkeys are bringing 40 to 50c.

POTATOES ABOUT THE SAME

Outside of the fact that there seems to be a better feeling in the potato market, there is no change since last week. The snowstorm was particularly hard on the potato market in view of the fact that trucking was practically impossible in and out of the yards. Furthermore the peddling trade was hard hit by the embargo and this only tended to make matters worse.

The better feeling in the market has been recognized in quotations on State potatoes. Some deals have been confirmed at \$2 per 150-pound sack delivered which is 30c better than quotations of late. Long Islands are being delivered in New York City at \$2.60, while Maines are about the same price as States.

Western New York potato growers may still bear our advice of a week ago relative to watching western markets. As an instance of this on January 7 the Pittsburgh market was much better than New York City and confirmation there would have proved advantageous.

CABBAGE HIGHER IN COUNTRY

Cabbage prices are higher in the country than they are in the city by several dollars a ton. Country prices are around \$20 to \$22 while city dealers are only willing to trade above \$18. The situation in the market, however, looks as though the city people would have to come around to these country prices because stocks on hand are not sufficient to warrant much holding out.

BEANS SHOW IMPROVEMENT

The bean market has shown something of an improvement over the past few weeks. Red kidneys are meeting a better market and quotations seem to be hardening. The inside price on Red Kidneys is now \$9.50 where \$9.35 was top a week ago and there is some business being reported at a higher figure, and the market is trending upward. Pea beans are also meeting a little better market. Strictly fancy pea beans last week were quoted at \$6, while this week they are 50c a hundred better and in some instances quotations are going beyond \$6.50 with a firm feeling persisting. White kidneys are not doing as well. The market on this line of goods is dull and weak while marrows are meeting an unchanged market, ruling slightly easier.

HAY SLIGHTLY BETTER

The hay market is taking on a slightly improved tone. This improved situation is not solely confined, strange to say, to the fancy grades. Hay grading really choice is worth around \$27 to \$28 while No. 2 would bring anywhere from \$24 to \$26 and No. 3 would bring \$23 or \$24. As usual small bales are worth about \$1 a ton less than large bales.

In Search of a Prepotent Herd Sire

(Continued from Page 55)
sale. They averaged me \$175 a piece. The reason for this sudden purchase at that time was to fill a milk contract

which I had made. The cows were in most cases out of bulls with no particular backing and the dams of these cows had not been tested for seven days or for the year. I got enough milk to fill my contract, and the cows proved to be free from T. B., so at the price I paid for these pure bloods, I should have been satisfied. Everyone of these cows has been given a chance to show what she had in her, but not one has done better than just average. This experience of mine with these seventeen cows has proven to me that when a family of cows all show better than average production, it is not the man behind the cow, but the breeding behind the cow that does the trick.

As a successor to "Old Dutch" we used HENGERVELD HOMESTEAD DEKOL 4th. His seven yearly daughters average 18,969 lbs of milk and 832 lbs of butter. This was another prepotent herd sire, who, by the way, was a grandson of "Old Dutch" out of one of his best daughters.

"Hengerveld" came to our farm at ten years old and lived to be twelve. So far his daughters yearly production has averaged greater than that of "Old Dutch." HENGERVELD HOMESTEAD DEKOL 4th died last August and with breeding season coming on I had to act quickly. In another article I will tell you about my trip to Wisconsin and how I found what I was looking for.

Henry Morgenthau Jr.

Color Your Butter

"Dandelion Butter Color" Gives That Golden June Shade which Brings Top Prices

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade. "Dandelion Butter Color" is purely vegetable, harmless, and meets all State and

National food laws. Used for 50 years by all large creameries. Doesn't color butter-milk. Tasteless. Large bottles cost only 35 cents at drug or grocery stores. Write for free sample bottle.

New Jersey Potato Growers Study Market Situation

POTATO growers in New Jersey have been holding a number of important meetings recently for the purpose of studying the various factors that surround the potato growing business in order to learn just where the trouble lies with New Jersey potatoes. These conferences have been called by the State Potato Improvement Committee. On December 23 a very important meeting of representative potato growers from the counties of Monmouth, Middlesex and Mercer was held in Hightstown. Those attending the conference were members of the Potato Project committees and the county agents of the three counties, Dr. W. H. Martin of the Experiment Station, H. B. Weiss and A. L. Clark of the State Department of Agriculture and W. B. Duryee.

It was brought out at the Hightstown meeting that the comparatively low prices received for the New Jersey potatoes in the market was due to the uncertain quality of the Jersey pack. Furthermore, the tremendous increase in the production along the Atlantic Coast in recent years shows that the New Jersey crop is a diminishing factor. It is clearly evident that a better product grown on adapted soil and more efficiently marketed, is of greater importance than a drastic cut in acreage and a consequent further loss of prestige in the markets.

Growers present at the potato meetings have been unanimous in their support of a program calling for better grading of New Jersey's potato output. A lesson can be gained from other New Jersey experiences in better grading. The "Jersey Jerry Brand" has become established on the market, and Jersey eggs also have a reputation all their own. It looks as though potato growers have got to follow along the same line.

The New Jersey State Potato Improvement Committee's work in staging public trials of the "New Jersey potato" and the conferences that are being held are apparently meeting with the approval of the growers. Much constructive work has been done, but there is lots of room for the continuation of this effort to bring about an improvement through the cooperation of all those involved, including growers, dealers and bankers.

Central Pennsylvania Notes

J. N. GLOVER

MORE SALES of farm stock and implements have been held in Union County this fall than any one ever knew of before. The short or poor corn crop and the shortage of money among farmers are the reasons. In Buffalo township of this county there are 8 farms without any livestock on them, on all of which farmers made money or a good living in past years. The largest part of the wheat crop has been sold around \$1.50 though a few farmers are holding for better prices.

There is some demand for oats at 50 cents a bushel for local demand. The pork for the year's use has been provided for already to save the corn for next year's feeding. Not many hogs have been fattened to sell later in the winter. The growing wheat is not as promising as usual this time of the year on account of dry weather, but it may come through the winter all right if it is covered with snow later.

Kill a Cow!

I will be glad to cooperate, providing at least one thousand other dairymen will do the same, in selling or killing FOR BEEF PURPOSES at least one of the poorest producers in my herd between now and March 1, 1925.

Our Lawyer Answers Interesting Legal Tangles

Last July I gave the Northern Utility Company, Inc., of Watertown, New York, (an electric company) permit to set cedar poles and run a line along the highway by my farm and I signed an agreement to that effect; but I inserted a clause that it would be confined to the highway only and that they could not molest the appearance of the farm in any way.

When the line was erected they proceeded to cut and trim shade and ornamental trees as they saw fit for benefit of their line and also placed guy wires from three to six feet inside of the road fence.

They agreed to pay me for the three large trees that they cut that stood in the fence line for which I was to receive \$25 each. Their agent or right away man said he would bring me a check for the amount in a few days. When he did appear he had a lease that he said I was obliged to sign in order to receive my pay, for he said the transaction had to be recorded in the county clerk's office. The lease read that they could reconstruct or remodel the line whenever they saw fit.

I refused to sign their paper and he refused to pay me the \$25 each for the three trees. The four guy wires were installed after I refused to sign their lease, so we have had no talk on the guy wires as yet.

Am I obliged to sign any papers more than a receipt in order to receive my money, and also can I demand pay for the four guy wires that were placed on cultivated land, the land being used as meadow at the present time?

Please advise me what I can do. If you wish more information regarding it, please let me know.—O. H. G., Oneida County, N. Y.

IN replying to this recent letter concerning the activities of the Northern Utility Company, it seems to us that we can best serve by reviewing the law upon the subject matter involved.

It is well settled and understood that private property may be taken for public use by right of eminent domain on working due compensation to the owner for such taking. Telegraph and telephone companies are public utilities, and as such are clothed with the necessary power to condemn private land for public use. Such companies have no right, however, to take private property for their poles and wires without compensating the owner or procuring his consent. Without authority, it is a trespass to take private lands for public use, and from every such invasion of another's land against his will the law will infer damages. A trespasser on land is liable for both the direct injury to the land and the natural consequences to be expected from his acts. A trespasser cannot gain a right in the land of another by his trespass. Such right depends for its inception upon a lawful entry. Hence, it has been held that a telegraph company which built its line over private lands without authority of law or permission of the owner may be ejected at the suit of the owner or his grantee. (See Postal Telegraph Cable Company vs. Eaton, 170 Ill. 513).

Owner Remains Owner in Fee

Now, the owner of a tract of land compelled to part with a strip of it for public use as a highway remains the owner in fee of the soil of that strip subject only to the right of the public to pass and re-pass over it as a highway. This right of ownership with its limitation extends, of course, to any subsequent purchaser of the tract.

It will therefore be seen that since all owners of land abutting on public highways are generally owners of at least half of such highways, subject only to the said easement or right of the public, all telegraph and telephone companies

desirous of planting poles and stringing wires in and along public highways must in some manner, either by statute, condemnation proceedings, purchase or license, lawfully acquire the right to run such lines along the highway.

Company May Trim Trees Reasonably

Now once a company acquires a legal right to string its wires along the highway, such right carries with it the incidental right to trim trees. Such trimming must be done in a proper manner and only when necessary, and the company is answerable in damages to the abutting owner for all unnecessary, improper and excessive cuttings. (See Hyant vs. Central Telephone Co., 123 Mich. 51.) If the company, in running its line along the highway, removes, destroys or mutilates trees planted or owned by an adjoining landowner, it is responsible for the resulting damage. (See Bronson vs. Albion Tel. Co., 67 Neb. 111).

Authority given to a telegraph company to plant its poles and string its wires along a highway confers no right to injure the property of the adjoining owner or appropriate his trees without payment. (See Daily vs. State, 51 Ohio St. 348). However, both a public service corporation lawfully occupying a highway with its poles and wires, and an abutting landowner having an equitable easement in trees along his front are bound mutually to respect each other's rights and reasonably to accommodate one another. (See Norman Mill & Grain Co. vs. Bethurem, 41 Okla. 735).

As It Applies to This Case

With this review in mind, we can now consider your specific problem. Having given the permit you speak of, the company had the right to plant its poles and string its wires. Incidental thereto, it had the right to trim trees where necessary. If such trimming was done negligently, carelessly or excessively, you have the right to recover damages therefor. For the three trees that were cut and removed in entirety, you have the right to receive the amount they agreed to pay without giving any further lease or consideration whatever. As to the guy wires, if they are planted upon your property and outside the limits of the highway, you may, if you choose, compel their removal. You need sign nothing but a receipt in order to secure payment, but you may, of course, embody the provisions of the permit in a lease. This latter is discretionary on your part.

When You Die Without A Will

"I would like an answer on the following question: If a wife outlives her husband or the husband outlives his wife, how much or what part does the wife get and if husband outlives his wife and she leaves property where there is no will and no children?"—Mrs. S. C., Onondaga County, N. Y.

Replying to your recent letter, your inquiry may be answered as follows: If a husband dies without a will, leaving a wife and no children, the wife is entitled to one-half his personal property, plus \$2,000 absolutely, and she is also entitled to the right to use one-third of his real property during her life. This interest in his real property reverts or passes to the husband's heirs and next of kin, that is, to his brothers, sisters, parents, nephews, nieces, etc., upon death of the wife. If the husband leaves no heirs or next of kin, his widow is entitled to all his personal property.

If the wife dies without a will, leaving a husband and no children, the husband is entitled to the whole of her personal property absolutely. He is also

The Trouble Maker—By E. R. Eastman

CHAPTER XVI

"H E'LL be back with help," declared one of Greene's masked followers after the row in the road when Bill Mead had been forced to return to Ball's with his milk undelivered.

"If he is," Greene stated with an oath, "we'll be right here waitin' for him."

"That's the talk."

"If these scabs are bound to deliver their milk, we'll find a way to deliver it not to their likin'."

The men agreed. The general excitement of the situation, the fight with Mead, and a drink or two mixed with young blood had aroused the mob spirit. All of them were more than willing to meet trouble half way.

"There's one thing to remember," Greene told them, "everyone of you will have to keep your mouth shut about this whole thing. When we go home, just forget that it happened. We're all tarred with the same brush, and anyone who squeals gets himself in trouble, and everybody else."

"Righto! Mum's the word!"

After a while, Greene again posted most of his men back of the stone wall, on the upper side of the road. Four of them he ordered to the opposite side, a little further up the road.

A long hour passed with nothing to break the peace of the sunny fall morning, except the chirp of crickets, the twitter of birds, and occasional low-voiced conversation among the men. Greene had difficulty in keeping them quiet. But finally their straining ears caught the expected rattle of the lumber wagon.

"Here he comes!"

"Shut up, you fool!"

Those behind the upper wall waited a moment longer until they saw the wagon coming down the little slope into the hollow.

"Come on, boys!" shouted Greene. "Stop the son-of-a-gun! Grab his horses!"

Over the wall and down the bank they jumped and ran, some directly to the wagon, three or four of them to grab the heads of the startled horses.

"Stop right where ye be!"

They stopped abruptly to look squarely into the business end of the muzzle-loader, backed up by the deadly cold eyes and out-pointed beard of the little old man who stood erect on his wagon, to hold it unwaveringly upon them.

"Let go of them horses!"

They let go.

"Now you fellers stay right where ye be—I don't want any trouble—I ain't no trouble maker. But, by ginger to grind-stones, this milk is goin' to the factory this morning, and the first man who tries to stop it will get stopped himself."

The menace in the old man's eyes told the men that he meant just what he said.

"But Johnny—"

"Shut up! Stand back! Don't you dare to 'Johnny' me, you worthless whelps. I'm 'shamed to think that such men live, let alone that they're neighbors and farmers. Drive on, daughter!"

The white-faced girl pulled on the lines, spoke to the excited horses, and they jumped forward. With the sudden lurch of the wagon, the old man lost his balance and sat down suddenly.

IN his excitement, he had neglected to look behind him, so he had not seen the four men who had sneaked up from the stone wall on the other side. When the jerk of the wagon seated him so suddenly, he lost control of the situation.

It was only a few seconds, but in that time, a man reached over the wheel and

grabbed his arm, and another yanked the gun from his hands. In an instant, a dozen men were on the load of milk, all moved to a common purpose. Not a word was said. No one paid the slightest attention to either John Ball or Dorothy. All that could be heard was the grunting of laboring men as they lifted the milk cans filled to the brim, raised them in their arms and heaved them out of the wagon into the ditch.

Crash! Rattle! Bang! Crash! The first cans hit the ground. The last ones smashed into the first ones. As they struck the covers flew off, and the milk splattered and flowed out until the shallow ditch ran for a moment full to the brim. Not a can was left on the wagon; scarcely a drop was left in the cans.

"Turn the team around," Greene commanded.

The men obeyed.

"Now, Ball, we're sorry this had to happen, but it takes a lot for some folks to learn their lesson, and the sooner

fight, 'cause I know I'm right!"

"But you're getting too old to fight, father. Maybe, too, you're wrong. But even if you are right, let someone else do this fighting. You're all that Mother and I have."

"No, Dot, I can't do it. If the old man quits now, they'll think I'm a coward. Never have been a quitter, and I'm too old to start now. Besides, somebody's got to put a stop to this nonsense. If there ain't nobody else to do it, by ginger, I will." He straightened up and squared his shoulders. "Old man ain't licked yet."

Realizing that it would do no good to persist, Dorothy gave up the attempt.

When they drove into the yard, Bill and Mrs. Ball were anxiously awaiting them. Bill took the horses to the barn, while Dorothy briefly explained to her mother what had happened. Ball had nothing to say, but went directly to the barn, backed out the flivver, and started for Speedtown.

What Happened in the Story Last Week

JOHNNY BALL is off to deliver his load of milk! He carries a shot gun, his face is set in grim determination—and beside him rides pretty Dorothy Ball, both of them going into certain trouble. For a group of insurgent strikers, headed by young Greene, have disregarded Jim Taylor's warning against violence and have held up Bill, old John's hired man, and sent him back with a steadily-growing tale of assault and battery. He says that Taylor led the gang—a statement not hard for old John to believe, as Jim has headed the fight for better milk prices and opposed John at every turn. Even Dorothy, Jim's former sweetheart, now estranged because of the trouble, finds her secret confidence in Jim's fairness wavering.

you and some of those other scabs find out that we mean business, the sooner you will save yourselves a lot of trouble. Take your team and go home—and take my advice and stay there!"

Ball glared at him, but said nothing. For the moment, the English language was totally inadequate.

But not so with Dorothy.

"You cowards!" she flared at them. "You despicable cowards! If you ever had a chance to win this strike, you have lost it by this day's work."

Then she took up the reins, spoke to the horses, and for the second time that morning, the team and wagon wended its way back to the Ball homestead.

FOR most of the way back Dorothy and her father had nothing to say. Finally, as they came around the bend in the road and saw the big red barns and the long rambling comfortable house of their home, Dorothy's eyes filled with tears and she put her arm around the shoulders of the old man.

"Daddy, you don't know how sorry I am about all this, but it seems as though you're to blame for some of it. Why can't we just keep our milk at home and let them go on with their terrible quarreling and fighting? We don't really need the money, and you know, father, you said the other night that we all do need to be happy. You're just keeping yourself all stirred up, and you're making Mother and me worried and unhappy all of the time. Why can't we just stay home and let them go it?"

John Ball made no reply for a moment. Then he swallowed once or twice and blinked the suspicious moisture out of tired old eyes. If he could only do as Dorothy suggested!

"Can't do it, Dot. Matter of principle. This is a free country, and I've got a right to go down this road and deliver my milk without no interference. When they tell me I can't, something rises right up in me just as it did in them American farmers when the Britishers made them pay unjust taxes without no representation. Jest makes me want to

For an hour he was closeted in the little office of his friend, Dave Messenger, the sheriff. For an hour Messenger talked, reasoned and argued to convince Ball that he was making a mistake. Secretly, the sheriff was in sympathy with what the dairymen were trying to do. Also, as Ball's friend, he regretted his attitude, but finally gave up in disgust.

"Well, Johnny, if you're bound to make a blamed fool of yourself, I don't know as I can prevent you. I'm tellin' you plain that if you insist on action, I'll have to arrest him. But you're making trouble for yourself, and all the rest of us—Don't know why I ever left the West for, anyway," he grumbled.

Then the sheriff went out, climbed into his car and headed it for North Speedtown. In his pocket he carried a warrant for Jim Taylor's arrest.

A half hour later the sheriff drove into the Taylor yard, and Jim came to meet him. After passing the time of day, Messenger said:

"It's a shame, Jim, I've got to ask you to come down to town with me this afternoon. I feel like a skunk to have to do this, I like a quiet life myself, but I've got a warrant here for you 'count of that mix-up with Ball's milk this mornin'."

"Does Ball think I was connected with that?" asked Jim quickly.

"Yes, he said you were the ring-leader of the gang. I have just spent an hour with him, but might just as well argue with a stone wall. He insisted that he wouldn't get the trouble straightened out in this county until you had had your lesson. Said it was my duty to come serve this warrant on you. 'Course, as far as that goes, it is—Nice, quiet, peaceful, neighborly country!"

Jim looked down across his field to where he could see the Ball farmstead in the late afternoon sunlight.

After a while he turned back to the sheriff.

"Knew old Johnny had got down on me," he said, and then slowly, as if to himself, "but I never thought he'd go as far as this."

The sheriff said nothing, but sat wriggling around uncomfortably in his seat.

"I didn't have a thing to do with that row this mornin', Dave. I'd have stopped it if I'd known it in time."

"You don't have to tell me that, Jim. But Johnny says you did, and a lot of the townspeople who are against this strike business will believe it. You've no idea how rotten I feel about this, boy, but I've got the warrant, and the law says I've got to serve it."

"Sure, you've got to serve the warrant, Dave. Wait until I change my clothes and I'll be with you. What about bail? I don't know much about such things," he continued with a twisted little grin. "How long will I be—your guest? Have to stay away from home all night? You know, Dave, cows always have to be milked."

"Fraid you'll have to stay all night, Jim. The judge is kind of an old crank. He's for the milk dealers, too—Most of the lawyers are—and it'll be just like him to be slow about the bail business."

JIM went into the house, telephoned a neighbor to make arrangements to get his chores done, and then changed his clothes. When he was ready, he went downstairs, called his sister into the kitchen, told her what had happened, and instructed her to get a neighbor woman to come and stay all night.

"If Mother worries about where I am," he told her, "just say I'm staying with Dave Messenger tonight."

Then he went out, climbed into the sheriff's car, and went with him down the familiar country road and through the streets of the town to the county jail.

After they arrived, there was an awkward movement, and then Messenger said:

"Is there anything I can do for you, Jim?"

"I suppose the first thing is to get a lawyer," said the boy.

"Any choice? How about John Winslow?"

"Why, I suppose he's as good as another. If you think Winslow is all right, ask him to step around, if you will, Dave."

A few minutes later, Winslow walked into the little room in the jail where Jim was. He was a type of New England Yankee of a past generation that is rapidly disappearing from American life. Tall he was, with a martial erectness of bearing; hawk-faced, grizzled of hair, with grey eyes which constantly crinkled at their corners when he smiled.

"Hello, boy," he said. "I've heard about the ditches running full of blood, but they tell me you've been making them run full of milk!"

"Didn't have a thing to do with it," said Jim.

"Oh, I know that. What we have to do is to prove it. Where were you when all this fracas was going on?"

"Settin' up corn all the morning. Didn't even hear of the row until I came in for dinner at noon, and somebody told me about it over the telephone. Wasn't off the farm today until Messenger came after me with the warrant. Was intending to come down tonight and go with the county agent to a milk meetin' over at Honeyport."

"Both John Ball and Bill Mead say you were the leader of the gang."

"They would. Johnny would like to believe I did it, and he never knows anything or anybody when he gets into one of his rages; and everyone knows that Bill's the worst liar in town."

"I don't doubt it," said the lawyer. "But maybe the jury would."

"What did Dorothy say about it?" asked Jim. "They told me she was with

(Continued on page 63)

Trapping As A Side Line

Snaring the Wary Mink and Muskrat—Keeping Skunks in Captivity

It is easy enough to catch mink in "blind" sets if care is taken to leave the surroundings perfectly natural. When a trail is found, follow it until it enters a narrow place just wide enough to set the trap. Then dig out a small hole for the trap so that it will be level with the ground when covered over. Precaution must be taken to prevent the trap from freezing to the ground, in which case it would fail to spring. If within reach of water, stake the chain ring; otherwise clog it with a light bush or pole. A narrow place may be made in the trail by putting up sticks on each side of the trap. It is well to have a trap set in the entrance to every den, hollow log and drift pile into which mink tracks lead, as the animal is sure to re-visit such places.

A successful way of catching the mink is to dig a hole back into the bank of a stream and bait it up several nights before setting the trap. Fish is preferable for this purpose. When tracks show that they are using the place, set the trap without leaving any tracks around the set. The trap should always be set under water as the mink's keen sense of smell will often detect a rusty trap set on land. A little fish oil will help entice the animal into this sort of a set.

In the winter mink are not traveling so much, and congregate in sort of families around mill dams, drift berms and rocky bluffs, where the fishing is good. They are expert fishers and are able to catch all they can eat. To make such a find is like discovering a small gold mine; for if the trapper sets his traps in holes in the ice or in runways where each animal will drown as soon as caught, he can often make many suc-

cessful catches. A struggling mink is pretty sure to alarm the others so they will leave.—Richard K. Wood.

Winter Trapping of Muskrats in Northern New York

I would like to ask Mr. Wood a question on trapping. He states that we of the North Country should not worry if our swamps and streams do not thaw out in time for spring trapping of muskrats, that we should be content with taking winter rats. How are we to take winter rats and do it legally? Our grounds are frozen from before the open season begins until pretty near the close. Now how are we going to take rats in the winter? I and several other men here own our own trapping ground and that is the sole revenue derived therefrom. The law forbids destroying muskrat houses in winter or any other time for that matter.—W. R. T., New York.

I HAVE had considerable experience in trapping for muskrats in Northern New York and consequently know what the trapper is up against. I'll admit he has a problem to solve. However, the best professional trappers usually trap all winter with varying success. Yet it is a fact that the number of 'rats' cannot be taken in mid-winter by any trapper, that could be trapped in the late fall or early spring. The principal reason for this condition is the more or less hibernating tendencies of the 'rat'. It stores up food in the fall, and travels little during mid-winter.

"Blind" Sets for Stream 'Rats

Now getting down to brass tacks, I'll admit it is very difficult to trap rats in the winter without breaking open their houses, which is prohibited by law. But stream 'rats' can be taken quite steadily. The latter variety live in burrows in the banks and do not have large quantities of food stored up, consequently they have to

travel under ice and snow for food. Most professional trappers are familiar with under-ice and snow trapping for mink, otter and muskrats; which usually means "blind" sets along the banks and at air holes in the ice. Blind sets are also made under ice.

'Rats Often "Frozen Out"

Muskrats get frozen out of the water and make their homes in all sorts of sheltered places above water levels. An experienced muskrat trapper will find 'rat dens where an amateur would never think about looking for one. I have found them in the corners of rail fences, buried in snow and located near water, and even in hollow trees, although the rat is not a climbing animal and seldom uses trees for dens.

In short, bear in mind that many, many muskrats are frozen out of the water and you will find them in all sorts of places above ice, usually in a state of semi-hibernation. Investigate all tufts of dead grass seen in holes—usually an indication of a 'rat's nest.—Dick Wood.

Keeping Skunks in Captivity

Will you please tell me about raising skunks in captivity? Where do I go for a permit and what are the regulations concerning them?—Archie Harris, Madison county, N. Y.

THE skunk is one of the fur-bearing animals protected by law in New York, and for a farmer to legally keep skunks in captivity during the closed season it is necessary that he have a license issued by the state conservation commission. There are two forms of licenses issued.

One license is issued pursuant to the provision of section 159, sub-division 2 of the conservation law. This license permits the holder to keep skunks in captivity for propagation, scientific, educational and exhibition purposes only. The pelts of skunks propagated under this license can not be sold. The fee for this license is \$1 and the license is good for one year from date of issue.

The other license is issued pursuant to the provisions of section 200 of the conservation law. The fee for this license is \$5 and the license is good for one year from date of issue. A person taking out this license must file a bond with the commission in the sum of \$500. Pelts of skunks and other fur-bearing animals protected by law propagated under this license may be sold during the open season.

© AMERICAN AGRICULTURIST

THE side sections, although small, are perhaps harder to solve, because with so few words there are few cross-clues. But all the words are familiar ones and with a little patience (and perhaps the aid of a dictionary) all can be worked out.

Did you catch the mistake in the list of questions and answers last week? No. 20, down, was misprinted as 29, and the definition of 29 was omitted. The puzzle could be worked out by the words going across, but we apologize for the error, nevertheless.

Do you like the puzzles and do you want more of them? Let us know.

Easy Now To Own The Famous Witte Engine

Plan of Only \$5.69 for a Few Months Sets Record Low Price.

The rugged, dependable Witte Throttling Governor Engine—known for over 42 years as the standard of farm power—surely is within the reach of every progressive farmer now, according to a new plan just announced by Ed. H. Witte, world-famous engine builder.

Now only \$5.69 a month for a short time buys the standard Witte Throttling Governor Engine, fully equipped with the celebrated waterproof WICO Magneto. In spite of this low price which sets a record, the engine has nearly 40 new improvements, including a new device that makes starting easy at even 40 degrees below zero.

Long regarded as the cheapest and most dependable farm engine built, the WITTE develops 50% extra power on either kerosene, gasoline, distillate or gas. Operation on full load figures under 2c an hour. Trouble-proof and so simple that the woman folks can operate it. Easily moved from job to job. More than 150,000 WITTES are in daily use.

To introduce this remarkable engine to a million new users, Mr. Witte will send it anywhere, direct from factory, for a guaranteed 90-day test.

Every reader of this paper who is interested in doing all jobs by engine power should write today for a free copy of a remarkable new, illustrated book just issued by Mr. Witte, which explains the engine fully. You are under no obligations by writing. Just send your name, a post-card will do, to the Witte Engine Works, 1306 Witte Bldg., Kansas City, Mo., or 1806 Empire Bldg., Pittsburgh, Pa., and receive this interesting and valuable book that gives you valuable information about the application of engine power on your farm.

Make Your Roofs Last a Lifetime!

Positively that! The wonderful Seal-Tite method renews, preserves, and makes your old, worn-out roofs watertight. One application lasts 10 years. Write today for this great money-saving roofing offer.

NO Money Asked

We send you everything you need to stop all roof leaks without asking you to send a single penny. No C.O.D. No notes. Pay four months later if our material proves to be exactly as represented.

Write! Don't put off another day finding out all about this wonderful way of solving all your roof problems. We'll make you an offer so liberal, so clear, so surprisingly unprecedented that you simply MUST take advantage of it at once. Don't wait for rain to remind you that your roof leaks. Write TODAY!

Pretty Hands They Show Everywhere

No need to hide them or feel embarrassed when they're in use if they are soft, smooth, pretty hands.

Use lemons—rub the hands with half a lemon, night and morning, if the skin is dry, rough, red or cracked.

Note the transformation in a few days.

Lemon juice seems to affect most hands as no other agent can.

It's Nature's lotion, a whitener which millions use today to insure youthful looking hands. Why not take advantage of it?

Begin now to use this method daily. Keep a half lemon handy in a saucer by the sink or wash bowl.

The richest juice, best for the hands, comes from California Lemons. Be sure to get this kind. All first-class dealers sell them.

Using Winter Fruits In Appetising Ways

Family Recipes Exchanged---New Styles---Recommended Films

DURING the cold months, the farm table is limited to a few old favorites in the line of fruits, and it is sometimes a problem to the housewife to prevent her family from getting tired of the "same old fruit."

Here are some recipes for using oranges, bananas, canned fruit etc., in ways that will prove tempting to anyone with a healthy appetite.

Candied Orange Peel

Remove peel from four oranges in quarters. Cover with cold water, bring to a boiling point and cook slowly until soft. Drain, remove white portions, using a spoon, and cut yellow portion in thin strips, using scissors. Boil one-half cup water and one cup of sugar until syrup will thread when dropped from tip of spoon. Cook strips in syrup five minutes, drain, and coat with fine granulated sugar. Place on wax or paraffine paper until thoroughly dried. If it is to be used as an ingredient in cakes, puddings or candies dry it thoroughly without rolling in sugar and store in jars so that it is not airtight.

Lemon and grapefruit peel may be candied, using this same recipe, except that 1/2 cup boiling water is substituted for the boiling liquid in making the syrup.

Orange Salad

The success of the salad, as every cook knows, depends upon the combination of flavors obtained. This is especially true of the fruit salad, which is best when it contains a foundation fruit, such

of the fruit, is made by mixing 2 to 4 table spoons of powdered sugar with 1 tablespoon of lemon juice.

The following are suggestions for salads in which the orange is used as the foundation fruit and which are suitable for serving either for the salad course alone or as a combined salad and dessert.

Orange Salad

3 oranges
3 bananas

Slice and serve with dressing.

Variations

- 1 Add 3 apples pared and cubed
- 2 Add 4 pears halved or cubed
- 3 Add 4 slices pineapple cut up
- 4 Add 2 slices pineapple and 1/2 to 1 cup California cherries, pitted
- 5 Add 4 slices pineapple and 6 marshmallows cut up
- 6 Add 3/4 cup shredded dates
- 7 Add 1/4 cup walnuts to any recipe above.

Orange Shortcake

To make take:

Oranges
Sugar
2 cups flour
5 level teaspoons baking powder
1 level teaspoon salt
6 level tablespoons shortening
1/2 to 3/4 cup milk
1/2 pint jar heavy cream
1-3 cup powdered sugar
1/2 teaspoon vanilla

Butter

Wipe as many oranges as you care to use. Pare with a small sharp knife, removing white membrane with the skin,

drained from juice and with whipped cream. Place other half of short cake above the fruit, spread with butter, cover with orange sections, and garnish with whipped cream and with sections of orange. Serve the orange juice separately as a sauce.

Two Treasured Family Receipts

PAULINE Carmen, a frequent contributor to the AMERICAN AGRICULTURIST, has sent in a cherished family recipe for what she calls Fireless Fruit Cake. If it is as good as Mrs. Carmen claims—and other readers tell us that her recipes are excellent—it must be delicious. We pass it on for the benefit of our readers.

Fireless Fruit Cake

Grind and mix together 2 pounds raisins, 1 pound dried figs and add 1 1/2 pounds peanut butter. Knead on a board as you would bread. When well mixed, form into loaves, wrap in waxed paper and put away. Slice thin, when ready to serve. This will keep for a long time.

Here is another from the same source:

Buttermilk Cake

This cake recipe came with my great-grandmother from the sunny south, and none of us know how old it is.

Cream half a cup butter, with 1 cup brown sugar, and add 2 well beaten eggs. Mix together 1 1/2 cups flour, 1/2 of a teaspoonful of cloves, a few grains mace and nutmeg, 1/3 cups each of walnut meat and raisins. Combine the two mixtures alternately, with 1/2 cup buttermilk in which has been dissolved half a teaspoonful soda. Bake in a large pan, which has been lined with butter or waxed paper, in a moderate oven. Frost with a white frosting, placing a few nutmeats here and there, before the frosting hardens.

This makes a nice birthday or holiday cake, and will keep nice and moist for two weeks.

Practically every cold can be traced to an overloaded stomach, a diet lacking in green vegetables and acid fruits, an overdose of sweets, a lack of drinking water, a poorly ventilated bedroom, an overheated office, or a rundown condition brought on by continual loss of sleep. Some of us are guilty of all these abuses. Is it any wonder we are eternally catching colds?

Colds Fever Grippe Be Quick-Be Sure

Combat a cold at once. Every hour gained may save many hours of danger and discomfort.

Combat it in the best way science knows—in the way that meets all requirements.

That way is Hill's. It stops colds in 24 hours, La Grippe in 3 days. It is doing that for millions.

So sure that your druggist guarantees it! So perfect that 25 years have developed no way to improve it.

Don't take chances with a cold! There's where you need the best.

Smart Designs for Miss Ten - to - Twenty

No. 2294, a dress with lines that flatter the "awkward age" girl, has a slip-on blouse and a separate skirt attached to a sleeveless undergarment. Thus there is room for concealed tucks to be let down as legs grow longer. Sizes, 8, 10, 12, 14 and 16 years. Size 12 takes 2 1/2 yards of 40 inch material. Pattern 12c.

No. 2316 also is becoming to the girl who is shooting up into an almost-young lady. It has side pleats that give plenty of width, but are held in by belts, that may be of different material. Cut in sizes 6, 8, 10, 12 and 14 years. Size 8 requires 2 3/4 yards of 36 inch material. Pattern, 12c.

No. 2306 has girlish, pretty lines and will please the high school or college girl immensely. The sleeves may be long or short, the collar plain or a separate fancy one. It cuts in sizes 12, 14, 16, 18 and 20 years. Size 16 takes 3 3/4 yards of 40 inch material. Price 12c.

No. 2302 is a one-piece dress of a design that mother can use as well as big daughter. Both will like the long paneled effect of front and back and the smart little pockets and big buttons that finish the front. Sizes 16 years, 36, 38, 40, 42 and 44 inches bust measure. Size 36 takes 3 1-8 yards of 42 inch material. Price 12c.

TO ORDER: write name and address, pattern numbers and sizes very clearly, enclose right amount in stamps (coins sent at your own risk) and mail to Pattern Dept., AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York City. Always keep a record of your order.

as the orange, that brings out the flavor of the other fruits used.

For example orange salad, served on lettuce, French dressing or mayonnaise are perhaps the best dressings; while for a salad that combines this fruit with some other, as for instance bananas, either mayonnaise or a sweet dressing may be used, depending upon whether the salad is served as a salad course, or as a combination salad and dessert, which it very well may be.

Whipped cream, slightly sweetened, makes an ideal dressing for the sweet fruit salad, but a more economical dressing and one which brings out the flavor

then remove sections free from membrane. Sprinkle with one tablespoon sugar for each orange used and put in ice box or cold place. Put into flour sifter, flour, baking powder, salt, and one level tablespoon sugar and sift together twice. Add shortening and rub in lightly with the fingers. Add milk just enough to make a soft dough. Put into a greased cake pan and bake twelve to fifteen minutes in a hot oven. Beat heavy cream until stiff, adding slowly the powdered sugar and vanilla. Split short cake, place lower half on serving dish and spread generously with butter, cover with orange sections

My Ideal Husband

A Contest For Wives and Spinsters Too

THAT ideal husband of mine is not an impossibility. I do not expect him to be perfect for I have no right to expect more of a human being than God does.

While I do not expect him to be perfect I do expect him to have right motives and high ideals. He must be clean in word, thought and deed—not prudish, but right at heart.

And then he must be comfortable to live with; even-tempered, cheerful and happy with a sense of humor which will carry us

ing appointments and appreciative of what she may do for him. And surely he will remember to tell her occasionally how dear she is to him.

What I require of my husband he will be justified in expecting of me. Mutually we will help each other grow and develop. Longfellow says:

“As unto the bow the cord is,

So unto the man is woman

Though she bends him, she obeys him

Though she leads him, yet she follows—

Aunt Janet Conducts Another Interesting Contest

HERE is a question that all women will want to discuss. What qualities in man make him an ideal husband? Mrs. George Gray who often writes for the AMERICAN AGRICULTURIST has put down her ideas on the subject.

I know that other AMERICAN AGRICULTURIST readers must have very definite ideas on the subject of “My Ideal Husband.” Suppose you think it over, write them down and send me the letter. For the best letters received I will send prizes as follows:

FIRST PRIZE: \$2 in cash and a copy of ETIQUETTE by Gabrielle Rosiere.

SECOND PRIZE: \$1 in cash and a copy of THE ADVENTUROUS LADY, an amusing modern romance.

THIRD PRIZE: A copy of THE ADVENTUROUS LADY.

In case letters are of equal excellence and tie for prizes, the full award will be given each contestant. Letters should be not more than 200 words long. Address them to Aunt Janet, AMERICAN AGRICULTURIST, 461 Fourth Ave., New York City, and be sure they reach me not later than January 26th. Now let's hear what every wife thinks of every husband!

Aunt Janet

over the precarious places. Above all he must not be a fretter. He will love little children and enjoy his home life.

He need not have money, but what he has will be accessible to both and systematically accounted for. It will be valued only for the good it can do. While I would not have him stingy, neither would I have him spend foolishly. We would have music, flowers, books, concerts, etc., in proportion to our income.

This ideal husband of mine will be a man of decision. He will be dependable. His yea will be yea, and his nay will be nay. He will be progressive and broad minded and as the years go by, service for the home, church and community will broaden and develop the fine qualities.

Consideration A Major Virtue

Too many homes fail to reach ideal conditions because there is a lack of consideration, a failure to observe the little courtesies of life. Therefore, my ideal husband will be considerate and courteous—not perfunctory or punctilious—but just kind and considerate because he wants people to be happy.

He will remember that his wife is the same person who was once his sweetheart and he will endeavor to be as agreeable now as before marriage and that means much. It means that he will be particular as to personal appearance, prompt in keep-

Useless one without the other.

Last and most important of all, my ideal husband must be a Christian—a real Christian, not merely a church member. He will have a love of God deep in his heart and it will control all his words thoughts and deeds. If God is first in his life I need not stipulate his characteristics for his aims will be right and you know I do not expect him to be perfect.

—Mrs. George Gray.

Geographical Game

SEAT the players in a ring. Let the first one say the name of a city, mountain, lake, etc., located in any part of the world. The next player must then give a name beginning with the final letter of the previous word, and the third supply one beginning with the final letter of the second, and so on around the ring. Thus: America, Athens, Santiago, Ohio. Each player is allowed thirty seconds in which to think. If, by the end of that time, he has failed to supply a name, he must drop out of the game. The one who keeps up the longest is the champion. Any player, at any time, may be challenged to give the geographical location of the place he has named. If he cannot do so he must pay a forfeit.

The Trouble Maker

(Continued from Page 60)

her father when the milk was dumped.” “Haven't heard that she said anything. Well, well, don't worry, boy. I'll trot over and get the judge to fix up some bail so I can get you out of here tonight.”

In a half an hour, or so, Winslow came back. It was plain to see he was mad.

“That old sucker won't do anything tonight. Said maybe it'll take a little foolishness out of you to spend a night in jail. Couldn't budge him an inch. Said he'll handle your case in regular order same as any other criminal, and not a minute sooner.”

“Criminal, eh?” said Jim. “Some judge! According to him, I'm already convicted.”

“Well, we'll see about that,” said Winslow with emphasis. “But I'm afraid you'll have to stay here tonight, by. Just don't worry. We're going to take care of you. Some one is going to get his fingers burned before

he gets through with this or my name's not Winslow.”

Stalking angrily out of the jail, the lawyer met Dave Messenger in the corridor. The sheriff stopped him.

“Say, John, I'm a little mite worried. Bradley, the farm bureau man, just telephoned me that about every blame farmer in this county is trying to get him on the 'phone about this Taylor case. Funny how fast it has spread. Bradley says they're all mad as a dog with the rabies. Even most of those who are opposed to the strike say it's an outrage to jail Taylor. Bradley says they're on their way here from all over the county, without even stopping to milk their cows. There will be two thousand mad farmers in this burg tonight. Why in thunder don't you get Taylor bailed out and home? There's sure trouble if he's still in jail when that bunch gets here— Nice restful country, this is!”

(To be Continued)

NOW you can have the things you want and have savings left besides—thanks to this new Spring and Summer catalog.

For women and misses there is offered everything to wear—all marked with the distinctive stamp of Fifth Avenue.

For men and boys there is the latest in outer clothes and furnishings.

For the home there is everything needed to furnish it from cellar to attic.

For the farm there is every modern implement designed to lessen and improve farm work.

For everybody there are low prices which make buying elsewhere a mistake until you've checked the prices in this book.

Service Department

(Continued from page 59)

entitled to a life interest in all of her real property, that is, during the remainder of his life he is entitled to use all the real property left by his wife. At his death, the real property reverts or passes to the wife's heirs or next of kin as set out above. We hope this will give you the information you seek.

You Can Will Your Property To Anyone

"As I have been a reader of your paper for seven years, I am coming to you for some information. My father had a will for many years and made a new will about two months ago. He is past 82 years of age. Can he take a stranger as his administrator when he has a son of his own, who has a good education? How much can a daughter claim for board and funeral? How long will this will have to read after his death?"—Mrs. G. A. G., Wyoming County, N. Y.

We wish to make reply to your recent letter as follows: 1. So long as a person is of sound mind, memory and understanding, he can always make a new will to supercede one already existing. Age is immaterial. 2. A person making a will has an absolute right to name whomsoever he pleases as executor. 3. A reasonable amount only can be claimed for board. The executor is bound to pay actual funeral expenses before paying any other debt of the estate. 4. The executor or administrator is permitted to take a full year in order to settle the estate.

How to Appeal from Assessors

"What are the duties of the assessors? There was a piece of real estate, of an estate, that went to two parties. When the assessors assessed it they assessed it all to one party. This property was transferred in November, 1923. Is there anything that can be done about this?"—H. W. P., Chautauque County, N. Y.

Where an assessment is made upon real property, and it proves unjust or based upon a mistake, the interested

party has the privilege of applying to the assessor or board making the assessment for a reconsideration of the case based upon a proper knowledge of the facts. This application should be made within a month after the assessment is made. Even though a month may have elapsed, you might make the application and it will perhaps be considered. If the board or assessor refuses to reconsider the matter, you only redress lies in asking the Court to review the matter.

We would suggest that you talk to the other owner, and have him agree to pay one-half. Thereafter you may notify the assessor to divide all future assessments.

Removing Personal Property from Realty

"I bought a farm in Pennsylvania. Can the former owner remove the electric fixtures, shades and there is a large dome in dining room? They also want to take the hot water tank. This tank is in the kitchen, connected and heated by cookstove. When I bought there was nothing said in agreement about light shades and water tank. I expected everything like that to be left in the house. Now these articles are all fastened with screws. Can they take the screen doors? I have not said anything to former owner as I did not know but what he has the right to remove these articles. Would thank you very much if you would answer all of my questions."—T. P. D., Clinton County, Pa.

In reply to your recent inquiry, it is our opinion that the fixtures and tank should be considered as part of the realty and hence became your property upon execution of the deed. Ownership of screen doors and window shades is questionable in view of the fact that they are so easily removed. We would insist, however, upon the non-molestation of electric fixtures, dome, and tank.

Whether or not personal property, when attached to real property, becomes in itself real property depends upon screws or nails, but upon intention and upon loss of the personal property appearance. Did the owner intend to make it part of the real estate, and even though he did not, has it been so attached as to make it lose the appearance of personalty and take on that of realty? In other words, has the personalty (fixtures, tank, etc.) been so fastened as to really become part of the house? Certainly lighting fixtures and tank have. But doors and window shades could be determined only by a jury.

The following letter naturally pleased us but we believe it pleased our subscriber even more to receive such a large check, which he was unable to get himself. Here is the letter:

"Am glad to inform you that the Charles Israel Bros. Co. has sent me a check for \$107.09 which is the amount of the bill I had against them, less freight on the honey.

"I surely feel very grateful to you and will gladly reimburse you for your trouble and expense for postage, telephone calls, etc."

Of course, there is no charge for this service. Very often some subscriber encloses money to pay for something our Service Bureau does for them. This money is always returned because we ask for nothing except your good will toward the "Old Reliable AMERICAN AGRICULTURIST."

Can any of our readers give us the address of Mr. N. G. Kilbury, who formerly received his mail at Lodi, New York, and later from the Ithaca postoffice? If you happen to know where this gentleman is, the Service Bureau will appreciate having the information.

If things ever break it is just when you are busiest. Next time you are in town lay in a supply of hooks, screws, bolts and so forth for the haying and harvesting tools. You won't be sorry.

KEEP BREEDERS VIGOROUS

(Continued from page 53)

insufficient exercise that they have put no a great deal of fat. If that is the case, it is well to cut down the food that is too readily available and make them scratch for a while to take off the surplus and induce greater energy. Vigorous chicks come from vigorous breeders, not from sluggish, inactive hens.

Feed To Keep Hens Vigorous and Active

The morning feed should consist of a scratch grain scattered in the litter. This will induce a greater appetite and the birds will naturally go to the mash. Some birds naturally put on fat more easily than others and some are naturally not as active as others. This is often true of Barred Rocks. Barred Rocks put on fat easily, they are not an overactive breed and consequently we must keep them active if we want vigorous chicks. It would not be a good idea to cut down all of the mash but to limit the amount of mash available to your breeders. Be sure that there is plenty of green food at hand and at night give them all of the whole corn they will consume in order to keep their crops full during the night. Undoubtedly your flock will stand a lot of study and we recommend that any changes be gradual, not radical.

Treating Hens With Colds

Will you tell me what to do for hens that have colds and what to do for roup? I am not sure what my flock has. Some of the hens have sore eyes and froth appears about the eyes. A few have their heads so swollen that their eyes shut—A. N., Pennsylvania.

Some of your fowls are undoubtedly suffering from colds while others have reached the roup stage. A hen must first have a cold before she can get roup and her vigor and vitality will determine how quickly she can throw off a cold before the roup stage sets in. Therefore keep your birds vigorous and feed them so they will maintain that vigor.

Give your hens potassium permanganate in the drinking water. This chemical comes in crystalline form. Get an ounce of these crystals at your local druggist and dissolve them in a quart of water. One or two tablespoonfuls of this solution is poured in 8 or 10 quarts of water, just enough to give it the color of wine. Give the birds nothing else to drink. Where the hens are really bad, it may pay you to give each hen a one-grain quinine pill each evening for 4 or 5 days.

Stop All Drafts

It will be advisable for you to go over the henhouse very carefully to see where there are any drafts or cracks. These drafts are undoubtedly the cause of the whole thing. Have you dropping boards below the roosts? Dropping boards cut off bottom drafts.

Where infection is really bad, you will, of course, isolate the sick hens. Furthermore mix up a barrel of water (40 gallons) in a pint and a half of blue copperas and an ounce and a half of sulphuric acid. Do not put the sulphuric acid on the dry copperas or you will get an explosion. Use this solution for a head dip, dipping the birds' heads in it every day and dilute the solution with equal parts of water for drinking, if you do not use the potassium permanganate.

For Tanning Any Kind of Furs

Mix two parts salt peter and one of alum. Sprinkle on the flesh side of the skin and roll up and lay in a cool place. Then after a few days spread out to dry. Scrape off the fat and rub until the hide is very pliable.—Edna Dalton.

The New Improved *Walsh* No-Buckle Harness

NO BUCKLES TO TEAR

NO RINGS TO WEAR

After a month's FREE TRIAL SEND NO MONEY

Post Yourself on this new way of making harness which has three times the strength of buckle harness. Let me send you a set of Walsh No-Buckle Harness on thirty days' free trial, just as thousands in every state in the Union have done. Let me show you how harness can be made three times stronger without buckles—how much better looking and how much handier in every way. Try a Walsh on your team 30 days. Send no money. If it's not all I claim, return it at my expense. No obligation on your part. Write for free book today.

Costs Less—Lasts Longer

This wide-open, liberal offer shows that the Walsh must be an exceptionally good harness. If I did not know positively that Walsh Harness is better in every way than buckle harness, I could not make such an offer. In addition to having harness in the hands of thousands of users the country over for years past, I have tested and proven in various ways that my harness is better and stronger, hence cheaper by far than any other harness. I prove conclusively in my new harness book, which I am waiting to send you, that Walsh No-Buckle Harness will positively last twice as long as buckle harness.

Greatest Advance In Harness Making

Not only is the Walsh No-Buckle Harness stronger, but it is easier to put on and take off. It is also better-looking, handier and eliminates frequent repairs. Has better fitting hames, adjustable strap holder—the harder the pull, the tighter it holds—renewable spring snaps and many other advantages explained in my free book. The Walsh is easily adjusted to fit any horse perfectly. And remember that Walsh Harness actually costs less than buckle harness because it does away with repair expense—lasts longer.

Made in All Styles

No. 1—Samson.

No. 41—Side Backer

No. 91—Boston Backer.

No. 11—Breechingless

No. 71—Hame Tug

No. 81—Express

No. 51—Lumbering and Oil

These and other styles fully described in free book

See How Buckles Weaken and Tear Straps

The WALSH Has No Buckles—No Rings

Here is the cause of all your harness trouble, repair expense, breakdowns. Why put up with this when you can get a Walsh, which has no buckles—no rings.

See How Rings Wear End of Straps in Two

The World's Strongest Harness

Three times stronger than buckle harness. Buckles weaken and tear straps. As an example, a Walsh $1\frac{1}{8}$ -inch breeching strap holds over 1100 lbs. The same strap with the buckle will break at the buckle at about 360 lbs. pull. Ordinary harness has 68 buckles. Walsh Harness has no buckles—easy to see why Walsh is three times stronger than ordinary harness.

Friction Another Destroyer of Harness

Rings are another thing that makes harness wear out before it should. Examine your old harness and you'll find where rings have worn the straps at the ends. There are 270 places on an ordinary

buckle harness where ring friction wears the straps in two. Walsh Harness has no rings to wear the straps in two. Many other advantages are explained in the big, free book. Write for it today.

What Users Say

Government Experiment Stations and Agricultural Colleges are among the thousands of users in every state who praise the Walsh Harness. Walsh Harness took First Prize at Wis. State Fair, 1921-1922.

Mr. G. G. Anderson, Aiken, Minn., bought his first Walsh Harness five years ago and bought three more sets since for his other

teams. He says: "Walsh has buckle harness beat a mile."

Mr. E. E. Ward, Seneca Falls, Wis., says: "Have used Harness over 40 years. The Walsh is the best yet."

Mr. J. W. Rogers, R. No. 4, Baldwinsville, N.Y., says: "Have used it skidding logs and that is giving it a hard test. I think enough of it that I will order another set in Spring."

\$5.00 After 30 Days' Free Trial

Balance easy payments or pay cash after trial if you wish. Selling direct from the factory to you enables me to give the highest quality of harness possible to make at lowest prices. You can get a Walsh Harness in any style—Breechingless, Back-Pad, Express, etc. Easily adjusted to fit any horse perfectly.

Write Today. My free harness book will give you many wonderfully interesting facts and valuable information on harness—tells all about the

Walsh No-Buckle Harness—what hundreds of farmers think about it. I have a plan whereby you can make money showing Walsh Harness to your neighbors. There's a copy ready for you—write today.

The Ruin of a Good Mouser.

What Does a Farm Boy Think About?—By A. K. Getman

What About Potato Plans for 1925?

And Other Crop Topics Our People Are Thinking About

WHAT about potato plans for 1925? A lot of farmers are going to feel pretty peevish and warm under the collar when this question is put to them. They do not feel any too kindly towards potatoes since the crop is bringing such unsatisfactory prices this year. It is just for that very reason that we have got to make careful plans about potatoes lest we raise another crop that will not pay. It is also well to bear in mind that it is not wise to get too discouraged in a big crop year, for this condition is often followed by the reverse. Year in and year out, potatoes are a fair cash crop, where soil conditions are well adapted.

The 1924 crop was one of the largest in the history of the country. There are actually more potatoes on hand than the consuming trade will handle at a price satisfactory to farmers. The trouble is there are too many poor potatoes and not enough fancy ones. Right here is where we have got to do some real careful planning for the 1925 crop. E. V. Hardenburg of the Department of Vegetable Gardening writes as follows in answer to the

from a smaller acreage will serve as one of the most efficient ways to cheapen this cost of production, and this cannot be accomplished except by better stands of healthy high yielding plants.

It has been demonstrated in every important potato state in the Union that well selected certified seed potatoes will outyield average seed stock by approximately 50 per cent.

During the 5-year period, 1919-1923, fifty-four different field plot tests comparing certified with non-certified seed in 12 counties of New York showed an average yield of 256 bushels per acre from certified seed as against an average of 170 bushels per acre from seed not certified. This is an average gain of 86 bushels or a gain of 50 per cent. from certified seed. And it is safe to say that the non-certified seed used in these tests was better than the average run of seed used over the State.

Consult Your County Farm Bureau

During the past year, the department of vegetable gardening of the New York State College of Agriculture tested under very carefully controlled conditions 47 strains of the best Green Mountain, Rural, and Irish Cobbler seed stocks available in order that the relative yield and disease content of even these might be determined. Several of these seed strains showed no disease whatever. The average yields for all strains of Rurals, Green Mountains, and Cobblers were 389,342, and 243 bushels per acre respectively.

Growers interested in obtaining new and better seed potatoes for next year's planting will do well to make early inquiry either from the nearest county farm bureau agent or from the department of vegetable gardening of the college of agriculture, regarding these sources of seed.—E. V. Hardenburg.

* * *

Horseradish Fits into the Crop Scheme

SINCE horseradish is not much affected by temperatures, it enters into a system of management which rounds out a farmer's year. The bulk of his crops are ready during the summer months, but such crops as horseradish and kale enable him to extend his marketing season into late fall, after most other green crops are gone. As a matter of fact, horseradish can be left in the ground all winter if necessary, with no harm.

Grown from Root Cuttings

Horseradish is propagated by root trimmings. In preparing for market, the side roots are trimmed off, leaving a main root 4 to 6 inches in diameter. As a rule, well grown horseradish has few side roots nearer the top than 4 inches, due to a practice known as root pruning and performed during the growing season. Dirt is hoed away from the roots and all side shoots broken off for about 4 inches. The earth is then brought up around the plants again. This gives a first class root when marketed.

The trimmings may be around $\frac{1}{4}$ inch thick at the large end, which is cut off square across. The best side roots are picked out and cut off obliquely about 4 inches from the top. The angle of the cut makes it easy to determine which end is the top, when the roots are set out again. These pieces are tied in bunches and set in sand until ready to transplant next spring.

Does Best in Loamy Soil

Horseradish does best in deep, mellow soil into which a good coat of manure has been plowed. The soil should be mellow for quickest results. When all is ready for the cuttings, a furrow is plowed where the row is to be. This trench should be 4 to 6 inches deep. The cuttings are placed in the trench

either perpendicularly or obliquely with the square end up. The pointed end may be pushed in slightly, or earth gathered up close by the hand will hold the roots in place until the trench can be filled in by a horse implement, either plow or cultivators, or a hand hoe, if horses are not used.

When the rows are 15 inches apart, hand work is necessary, but when labor is scarce, it is sometimes necessary to row 28 inches apart so as to use horses. The roots may be about 4 to 6 inches apart in the row, although longer roots can be grown at 6 to 8 inches apart. It is necessary to root prune to get grade A horseradish.

Not Subject to Many Enemies

This crop is not usually susceptible to many diseases or insects, but the horseradish beetle is a troublesome pest in some sections. The beetle is on the job early in the spring and late in the fall. It eats the root around the surface of the ground or below. Many farmers do not successfully combat them, but the best remedy known is to dust the plants at the surface of the ground with lead arsenate powder and hydrated lime mixed up in equal parts by weight. New Jersey men claim this works real well, but the practice is not general.—H. J. EVANS.

* * *

The Asparagus Bed

THE time will soon be here when the new asparagus bed should be set and these stormy days are the time to make all the plans. Then when the time comes it will be much eas-

No! These are not giant prairie dogs or giant woodchucks. They are just fur trees in the grip of Old Man Winter.

ier to do the work if you have a plan all mapped out for those busy days in spring are never half long enough. I will give a little idea of our own bed that was set in the spring of 1922 and we began cutting from it in May, 1923, and had a long season and many good meals.

The ground should be worked up deep and fine. Our experience has been to set not so deep as most people advise and instead we cover quite deep the first fall with loose soil and then a heavy coating of manure. In the spring we fork up the manure and sow lettuce seed on the bed and we get a fine supply of nice early lettuce. Keep all weeds out of the asparagus and cultivate carefully. We set our roots about eighteen inches apart in the rows and the rows about two feet apart. Raise the bed about eight inches so to be sure of good drainage and do not set the roots too near the edge of bed. We set two rows one year and left room on one side. The next spring we set another row there. We set one row of one year old roots and one of two year old roots the first year and the other row was about 50-50. By doing it this way the expense is not quite as much at once. Our bed is in the garden where we can plow on all four sides of it, which makes it easier to take care of. If given plenty of fertilizer and kept clean an asparagus bed will be productive for many years.—C. J. D., New York.

This picture shows the effect of fertilizer on growth and yield of tomatoes. No fertilizer applied to plants on the left—yield $\frac{1}{2}$ ton per acre. Plants on right fertilized at the rate of 500 lbs. per acre—Yield 6 tons.

question relative to planning for the next potato crop.

Plan Potato Plantings Promptly

On account of the bumper crop just harvested, 454,000,000 bushels, (a record for the United States) and the relatively low price being obtained this fall, many farmers will be inclined to put off any consideration of next year's planting plans until spring. This is poor procedure. An old and fairly safe axiom is "Plant potatoes when seed is cheap." It now appears that good seed is available in abundance and at relatively low cost. Therefore every grower, who has any doubt about the quality of his seed stock, should arrange at once to get the best strain of his particular type as close home and as cheaply as possible, even though it is his near neighbor who has it.

Successful potato marketing begins with successful potato production and good potatoes (high yielding and high quality) cannot be produced without good seed.

A very ordinary hill of potatoes producing only two average sized tubers (8 ounces each) when spaced 3 feet by 18 inches in the row will yield at the rate of 161 bushels per acre. Yet this is 50 per cent. above the average yield for New York State. The reason—too many missing, weak and diseased hills in our potato fields. Yet it costs as much to plant, cultivate, and spray a poor stand as it does a good stand.

More Economical Production Necessary

The potato is one of the most expensive field crops grown due principally to the high labor and fertilizer costs of production. Better yields

What Does a Farm Boy Think About?

Why a Boy Leaves School to Go to Work

By A. K. GETMAN

"CYRUS, what's the matter with you? Why do you sit there doing nothing? I've been watching you for the last twenty minutes and you haven't made half a dozen marks on that tablet. Do you ever intend to get down to work?"

Thus ran the upbraiding which Cyrus received at the hands of his teacher. He had been looking aimlessly about and doing what the teacher would call "day dreaming." Cyrus had just turned fifteen and was the oldest boy in school. He had the biggest seat in the back row in a little school of 17 pupils, in which Miss Loree was just starting her third year as teacher in district 9. Her outburst of questions and indictments had come as a climax in her attempts to get Cyrus interested in his school work this year. She well remembered that two years ago he was bright, keen, alert and responded to her efforts to make the work interesting. But now what a change had come over him. His whole attitude seemed to be one of indifference. It was quite apparent that he was very much engrossed in his own thoughts. He seemed to want to be left alone. His only reply to Miss Loree's apparent fury was:

"I was just thinkin'."

"Thinking about what?" ejaculated Miss Loree.

"Oh, just about that carload of potatoes we shipped last Saturday."

And just then it came to Miss Loree that Cyrus was the first case she had thus far encountered of what they had called "adolescence" in her training class. She promptly changed her tactics seeking to help Cyrus with his new problems which had come to him so recently.

I have related this little incident not because of any interest it may have for teachers, but because of the interest I hope it will arouse in parents. We parents know far too little of what Miss Loree had recognized as his adolescent period through which Cyrus was passing.

Adolescence comes from a word meaning "to grow up." It is used to designate that period in the life of boys and girls when they pass from boyhood to manhood and from girlhood to womanhood. In girls it begins usually at eleven to thirteen years and with boys at thirteen to fifteen. We parents and teachers are so apt not to understand them during this period. This is not strange because the young folks scarcely understand themselves so subtle is the change. It is highly important, however, that we make every effort to understand them and their problems, because to a very real extent their future life work, their happiness and their service is dependent upon the decisions which they make at this time and our guidance of them.

This period in the life of boys and girls has been recognized for a long time. Even among the savages, the lad in his early training was turned over to the women of the tribe, but at about age 15 he was taken in hand by the men who exacted severe tests of him before he was admitted to the rights of a man. When "knighthood was

in flower" the boys were made pages and later became squires. This system of training the youth is one of the bright spots in the dark period of the middle ages. Only recently, however, has a systematic study been made of the physical, mental and spiritual changes through which the youth pass at this period. The study is a very baffling one. Every boy and every girl presents a different problem. This makes the problem for parents and teachers doubly hard.

Cyrus' characteristics represent just one type of attitude that may appear. For purposes of this article I want to call his attitude the "LIFE IN-

words, over two-thirds of them left school because of this "life interest" attitude.

It is difficult to give concrete suggestions regarding assistance for the young folks who show the characteristics of the "life interest" attitude. Thousands of the lads simply quit school and go to work. For the large portion of them this is wrong. Later they are certain to regret it. Just here, it seems to me parents can render vital assistance. Apparently the one thing that satisfies this longing for life activity is to give them real responsibility. It is not sufficient merely to have them do chores and help with the work as they have always done. If they could be given a definite responsibility, that is really their own

they would rise to the occasion. Such responsibility as a couple of pure bred calves, an acre of potatoes, a colt, or the poultry flock, will accomplish such a purpose.

Oh, yes, they are going to neglect some of their responsibility. That is the boy of it. Be patient. Your patience and kindness will be rewarded many fold. The growing boy is an unbalanced, lumbering creature trying to find his way about through the maze of new obstacles. Strive to help him get his balance. In many instances giving him real responsibility will be of vital assistance in getting his mental balance. It will help to keep him in school. Later he will appreciate this added preparation for his life work.

Most people are interested in boys and girls, either their own or somebody else's. We want them to succeed. America is built on the principle of giving the young folks a chance. A few weeks ago I wrote a little statement about a boy by the name of Cyrus and his new problems. Here I want to suggest another element in the makeup of our young folks which we are quite likely to misunderstand.

Have you a 'teen age boy in your home?

Will you please leave him alone?

"But," you protest, "he is always doing something he ought not to do."

Quite right. It is perfectly natural. If you "nag" him, you will only make matters worse.

Your sixteen year old boy's nerves are on edge. You may rightly say "mine are, too." His hands and his feet are both too big and very clumsy. He stumbles over everything he can possibly find and bangs into the furniture. His whole physical makeup is as much out of joint as the last year's suit of clothes which he is trying to wear, with the coat sleeves half way to his elbows.

"But he is so trying."

Console yourself. He is no more trying to you than you are to him. The tribulations that annoy you so much today will be gone tomorrow. One day he may be as gallant as any knight or football star and the next day you will see him crying like an infant. All these traits and many others are but symptoms of the "growing up" or adolescent period through which he is passing.

(Continued on Page 90)

The alarm clock will not long have an appeal unless he has an interest in the business.

TEREST" attitude. This is a common trait. Apparently he was dreaming, but actually he was doing a lot of thinking on his own account. To be sure he was not thinking about his lesson, but his answer regarding the carload of potatoes indicates that he was thinking about LIFE problems, rather than BOOK problems. In Cyrus' "new birth" great changes had taken place. If you were to ask him about his ideals, his thoughts or his problems he would promptly refuse to discuss them. This trait is one of the baffling elements in studying and helping the young folks.

There are many facts which point to the influence of adolescence on the actions of boys and girls. One of the most interesting group of facts is the following: Records show that there are approximately 15,000 boys in New York State between the ages of 16 and 18 who are out of school on farms. Of this number nearly 90% did not go beyond the eighth grade; 68.6 per cent of them when asked why they had left school replied: "I wanted to work," or a similar statement. In other

Lincoln Was Right

"The legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all, or cannot so well do, for themselves, in their separate and individual capacities. In all that the people can do individually as well for themselves, government ought not to interfere."—Abraham Lincoln.

NO MAN that ever lived had a better understanding of the fundamental principles of right government than Abraham Lincoln. He very clearly foresaw the danger of too much activity on the part of government and too much interference with individual affairs. One of the chief reasons why taxation has become such a burden to all of us is that we are constantly demanding all divisions of our government, from the school district to the nation, to do more and more of the things that we should do for ourselves.

When Bond Issues Are Right

MANY of the tax experts who are making a study of the tax situation have come to the conclusion that about the only way any substantial relief can be obtained is by issuing bonds to pay for long-time investments in public property.

It is pointed out that with the rapid growth of population the problems of government have increased and become more complicated, and that this increasing government work is necessary and must be paid for. We are continually asking for more things for the government to do. For instance, there are dozens of activities like those of the rural police which were not necessary a few years ago. Within even twenty-five years, there has been a great increase in the number of paupers, insane, orphans, cripples and sick, that must be taken care of at public expense. At the same time, there has been very little new building in recent years to care for these public charges. We are told that conditions under which some of the State's charges in New York State are housed are a disgrace to the State. Sing Sing has the foundation of a new prison started years ago that has never been finished because of lack of funds.

Now there are two ways that this public money can be paid for—either out of current revenues, that is, by taxes, or by the issuance of bonds. Without question, all temporary work and expenses should be paid for by taxes, but when it comes to building a great tunnel under the Hudson River that future generations will enjoy, or

the erection of public buildings that may last from fifty to a hundred years, it seems to us that it is unfair to ask the present taxpayers to pay all of the bill. Just as it is unfair and unjust to ask the future to pay for everything that is enjoyed in the immediate present, so it is equally unfair and unjust to ask the present to pay all of the charges which the future will enjoy.

However, we do not agree with some of the experts that there cannot be some reduction in government enterprise which will result in lower taxes. We know that if our people demand it emphatically enough, our government representatives will improve the efficiency of government from the nation to the last school district, will cut out unnecessary enterprises, and will postpone some other things that can wait for a few years, until we can catch up with our ruinous tax bill. But we do believe with the experts that, in addition to this, some of the permanent improvements which must be built immediately can be taken off of the shoulders of present taxpayers by issuing long time bonds.

It may be argued that bond issues lead to reckless expenditures. This is not necessarily so if such issues are properly safe-guarded. It is just as absurd to refuse the State or other municipality the privilege of issuing bonds for absolutely necessary work as it would be absurd to refuse a farmer or other real estate owner the privilege of paying for his farm over a long period by taking out a mortgage.

Little Visits With Dr. Holland

IT HAS BEEN rightly said that farmers are naturally religious. There is something about the close association with the clean, fine things of the outdoors, the animal life, and the sun, the wind and the weather, that brings man somehow closer to his Creator. The farmer may not always go to church. He may not be known generally as a religious man. He may even be heard to express himself in times of anger and exasperation in uncomely language; but all the same, if he has farmed it for a lifetime, at heart he knows himself as the son of the Master Mind and a real believer in the things of the Spirit.

Recognizing that this is true, we have for a long time been waiting until we could get into the columns of AMERICAN AGRICULTURIST a regular talk covering the thoughts of philosophy and religion in which we all believe. We wanted these talks not to be preachy, tiresome or pedantic, but simply a regular visit on the higher things of life and of living.

In our New Year's number, you may have noticed a little piece entitled "The Bells Are Ringing," by Reverend J. W. Holland. We thought this one of the finest things that has been in the paper in a long time. We have had it in mind for months to get Mr. Holland to write for us occasionally talks of this kind, and he has promised to do so. His first talk is on page 87 of this number. Turn back and see if you do not feel, after you have finished it, as we did, a little bit uplifted, with a little kindlier and happier outlook upon life.

A Successful Father

A FEW weeks ago we had the pleasure of hearing a market gardener, Mr. Joseph Bogner of New Hartford, New York, give a talk about his business. This talk came straight out of a lifetime of experience in growing things, and was therefore filled with practical common sense advice.

After Mr. Bogner was finished, a friend told us that while Mr. Bogner had made a success of his market gardening business, he had made a still bigger success in raising a large family. We are always interested in the human side of life. After all, making a material success is good only as it helps us to bring happiness and service to our fellows. Success is good, but success as a father is much better. So when we returned to the office, we wrote to Mr. Bogner and asked him to tell us what he had done to keep his large family of boys in-

terested and at home on the farm. He replied as follows:

It is true that after many years of struggle we are crowned with what I would call fair success in market gardening, but there is nothing much to brag about.

Now as to our boys, I have no special formula to keep them home. It is true I have been kind of liberal with them, and for quite a few years past I gave them a dividend on Thanksgiving Day besides their regular wages and board. The amount of this dividend varied in accordance to our season's sale and the services they rendered. For instance, the salesman or peddler, as we call him, who gets up early to go to the market receives, of course, more than the other. I think my place cannot be compared with a farm out in the country. We live right outside the city limits of Utica and, in fact, the city is crowding on us.

Some of the boys, in fact, all have been away in short courses at Cornell; two of them spent their winters in Florida. One thing I think is quite a draw, we have a good work shop with many carpenters and all kinds of tools and machinery to work and repair things. But, after all, I am not alone around here, most of the boys in the neighborhood are home.

It is true, as Mr. Bogner says, that he used no complicated scheme to keep his boys at home, but HE GAVE THEM A SQUARE DEAL in paying them in wages and board, and then he added to this a dividend in those years when there was any. This gave the boys a feeling that they had an interest in the business.

We know from experience that one of the hardest things in the world for a parent to do is to treat a grown boy as a real partner and accept him and his judgment as a man, instead of as a boy. Yet we believe that if a father and mother can do this, as Mr. Bogner evidently has, it will do more than anything else toward making the boy contented at home and willing to work to make the old farm a success.

Newspaper Headlines

EVERY day or so we get indignant about the misinformation which many newspapers are constantly giving consumers about farming and farmers. We do not wonder that there is so much misunderstanding between city and country, a misunderstanding, which works against the real interests of both farmers and city folks.

On our desk is a front page headline from a newspaper which reads: "WHEAT CROP GIVES BILLION TO FARMERS". No city man unfamiliar with farm conditions could read this without envying the lot of the farmer. It would appear to him after reading newspaper stories like this that farm people are rolling in wealth. On the other hand, country folks receive many wrong impressions of city life and conditions. As farmers, we are dependent upon the city for our markets; city folks are dependent upon farms for the necessities of life. More than this, no matter where we live, we are American citizens, "just folks", in fact. Neither the city nor the country has any monopoly on human nature, either good or bad.

Eastman's Chestnuts

ONE of my chestnut "fans" wrote to me the other day as follows:

Mr. Eastman's "chestnuts" recall the joke of the Englishman and Scotchman traveling together in the land o' heather. They came to crossroads where a signboard read "To Auchtermuchty 7 miles," and below were the words, "If you cannot read, call at the blacksmith's."

The Englishman saw the joke at once and laughed aloud and long over it. Sandy, however, saw nothing to laugh at, but it evidently stayed in his mind, for in the middle of the night he awakened his companion with a great slap on the shoulder.

"I see the joke noo," he roared, "I see it noo."

"What joke?" angrily asked his friend.

"Why that one on the signboard. I see a'noo. The blacksmith might no be at home!"

How Things Look in Other States

Standard Farm Paper Editors Say Conditions Are Looking Up

One of the big advantages which AMERICAN AGRICULTURIST obtains by membership in the Standard Farm Paper Group is the benefit of the advice and writings of the best farm paper editors in the United States. On this page we are giving you the benefit of these editors' opinions as to the present farm situation in each of their respective states. No men in America have a better understanding of farms and farm conditions than do they, and a reading of their brief statements will give you quickly a glimpse of present American agriculture that you can get in no other way.

* * * *

Two Good Seasons in the South

ON THE whole, farmers of the South have had two good seasons in succession. The moderate crop of 1923 sold at prices that brought a great gain in money value over previous years. Although prices in 1924 were not so good, the greater production brought the money value up to practically the level of 1923.

With the greatly increased returns of 1923 and 1924 farmers of the South have been able to wipe out or effectively reduce the debts incurred as a result of the losses of the three years previous. As a result they are in a more hopeful frame of mind than for several years.

Naturally in an area so large as the South there will be some variations in different sections. It happens, however, that for the most part those sections least favored in 1923 were most favored in 1924, with the result that financial conditions are quite well evened up throughout the entire South.—W. C. LASSETTER, *The Progressive Farmer*.

* * * *

Nebraska Agriculture on the Upgrade

THE condition of agriculture in Nebraska is best illustrated by the following facts and figures:

The value of Nebraska's eight leading farm crops has increased gradually from \$166,278,000 in 1921 to \$363,828,000 in 1924. This increase results rather from increased farm prices than from an appreciable increase in yields.

A report recently issued by the State Banking Department shows deposits the largest since August, 1920, reserves the highest since August, 1918, and loans and rediscounts the lowest since January, 1919. In that, the State banks are representative of the smaller communities, this is a direct indication of improved farm conditions.—SAM R. MCKELVIE, Editor of the *Nebraska Farmer*, formerly Governor of Nebraska.

* * * *

Wisconsin Cutting Down on Hogs and Low Producing Cows

REPORTS that have been in circulation regarding Wisconsin's agriculture tell only a part of the story. They have been very misleading.

Never before has the state harvested so great a crop of hay. Likewise the farmers of this state put up more alfalfa and clover hay than ever before. Corn was a fair crop, making fair silage. Wisconsin's silos are full, as a rule. The oat and barley crop was big. These feeds form the bulk of the dairy rations that are being fed. Thus the farmer is feeding a ration with but one cost and, due to the large supply, is feeding liberally. He is getting milk at a reasonable cost, leaving a fair margin.

Butter and cheese prices have advanced during the past few days. Tobacco is on the upgrade. Hogs and good beef animals, sold over the scales, are bringing a fair return. All really goor sur-

plus dairy breeding animals are finding a ready sale at satisfactory prices.

The pea canneries announce contract prices at least on a level with the past year, and prospects for even higher prices due to depleted stocks. Wisconsin will continue to can over half the country's peas.

The general trend of farming in the state is to cut down on hogs and the low producing dairy cows. Also the Wisconsin farmer plans to grow a greater acreage of the best feeds, such as alfalfa. Apparently these farmers plan to cut the cost of production and guard against a glut of their market.—JOHN A. CUNNINGHAM, Editor of *The Wisconsin Agriculturist*.

* * * *

Iowa Looking for a Hog Shortage

THERE seems to be a more serious corn shortage in Iowa this year than at any other time during the past twenty years. The crops of 1901

point in May and that there may be some decline, especially during the late summer months.

The hog price outlook is unusually strong. Because of the exceedingly high corn prices and rather low hog prices, hundreds of thousands of half fat hogs have been sacrificed this fall and winter. This means that a great hog shortage is surely coming on. We anticipate that hog prices will begin to strengthen very materially after the middle of January and that they will reach a temporary high point some time during late March or April. During May and early June while the fall pigs are coming on the market, the price may not advance so very much, but during the late summer hog prices should go exceedingly high. Business conditions seem to be improving considerably and the combination of labor well employed at high wages at a time when there is a genuine hog shortage, should result in hog prices going very high during the late summer of 1925. We shall be very much surprised if hog prices do not advance beyond \$13 at Chicago late next summer.—DONALD R. MURPHY, Managing Editor, *Wallace's Farmer*.

* * * *

Out on the Pacific Coast

CALIFORNIA growers are realizing approximately \$15,000,000 more in 1924 than they did in 1923, despite a 10 to 40 per cent smaller production within many of their 150 agricultural industries.

Fruit crops upset the prophets who mourned the severe summer drought, for irrigation facilities proved more nearly sufficient than any one anticipated. Truck crops have multiplied till California now leads all states in such production. Field and grain crops were the only ones severely reduced by drought. Irrigation plays little part in their normal culture, except for alfalfa hay, which forms about 80 per cent of the California forage supply.

Dairy production has increased despite the foot and mouth disease epidemic, which brought about extended slaughter of animals. The disease is now wiped out. Heavy butter storages, however, in California's outlet markets are still having a depressing effect on this industry. Beef producers experience in common with those of other states, a below-cost market. Sheep men were never in a better position. Following a blue spell in the

poultry industry during 1923, poultrymen are now experiencing difficulty in finding enough birds to supply present egg markets.

California farm products are 75 per cent dependent upon Eastern markets. These have shown improvement this year in practically every case. Exports of fruit products have been resumed to a greater extent than in any year since the war, which has served to bring the dried fruit and raisin industries out from under the shroud of surplus supplies.—DONALD L. KIEFFER, of *The Pacific Rural Press*.

Illinois Will Plan for a Balanced Production

THE new year finds the farmers of Illinois and Indiana facing the future with more confidence than at any time during the past four years. Nature did for them this year what they have been unable to do for themselves, and what Congress refused to do for them. Short crops have sent prices upward until they are somewhere near a parity with the prices of other commodities.

(Continued on Page 75)

AND WE WONDER WHAT AILS THE WATER SUPPLY
Copyright 1924, New York Tribune

Darling, in the New York Tribune

and 1894 seem to have been the only ones worse than this year's crop. In Kansas, Missouri, and Southern Illinois the situation is not so bad, but Indiana, Ohio and Northern Illinois are in the same position as Iowa. This situation, of course, gives farmers great confidence in the future of corn prices. Unfortunately, when farmers become encouraged about the future of prices, they oftentimes carry matters altogether too far. In 1920, for instance, certain farmers held wheat for \$3 a bushel and corn for \$2 a bushel, who later were willing to accept \$1.50 for their wheat and 50 cents for their corn.

This year there is a good chance that corn prices will continue to advance until May. After May a lot depends on the kind of corn weather we have in the corn belt. In the ordinary season corn prices on Iowa farms advance from June until August or September. This year if the corn growing weather is at all favorable we would not be at all surprised to see very little advance in corn prices from May until September. There is a good chance that the extreme shortage of corn will encourage such a bullish attitude on the part of most farmers that prices will reach their high

Farm Electrification— a challenge and a responsibility

The problem of electrifying the farm is a challenge both to scientific agriculture and to electric engineering. With agriculturists and engineers joining forces in solving this problem, the possibilities of farm electrification are limited only by man's ingenuity.

This splendid opportunity to serve the farm and benefit the entire country is not being overlooked either by the agriculturists or others interested. A committee composed of eight great organizations has been studying and carrying on experiments seeking solutions to these problems.

This general committee and local committees in twelve states have before them, among others, the problems of:

The lowering of farm production and marketing costs by the wholesale application of electric power.

The raising of the farmers' standards of living by the introduction of electrical conveniences.

The closer relation of the farmer to industry and transportation through the interconnection of electrical distribution systems and the wider use of electric power.

These studies and the solutions which are expected to result must have a profound effect upon every community.

Write for the attractive booklet on farm electrification which will be mailed to you without cost. Read it and pass it on to your neighbor.

The committee mentioned above is composed of the American Farm Bureau Federation, National Grange, American Society of Agricultural Engineers, U. S.

Departments of Agriculture, Commerce and Interior, Farm Lighting Manufacturing Association and the National Electric Light Association.

Do Cows Need Exercise?

A Plowhandle Talk

By H. E. COOK

I FIND myself often troubled to get into the right classification. Its like this—I have been with cows all of my life and really of all things I have done the one thing that seems most likable—the thing I can do without having to everlastingly push and crowd myself into doing is to take care of cows. I often buy a cow that does not show very well because of the enjoyment of getting her into condition, sort of changing her over in form and function. I am frank to confess that it is not over a 50-50 conclusion.

I like to go down a row of cows and study why some are good and some are not so I won't be gambling as much when buying. Still when a new batch comes in uncertainty is there. With all of this apparent study in feed and care, which must be of a good safe sort or we should be put out of business by our many-sided expert governors who supervise certified milk production, I continually find new things not observed before or, if not so, entirely forgotten.

Dry Cows A Subject of Study

This time it is that the dry cows running loose in pens void softer droppings than those stanchioned and turned loose each day. This is where my classification trouble comes in. Am I dull as compared to other folks or am I more than an average observer, can someone help out? We have around fifteen head of dry stuff, out of a general average of thirty-five, loose in pens. These fifteen appear better as a whole than those confined.

I might explain that all of these dry ones are fed upon dry feeds, oil meal and bran with oats added, the grain ration being balanced so that with hay we keep their droppings normal. We have a silo on the dry stock farm, but do not fill it because hay plants grow well and the corn plant does not, and the soil does not adapt itself to cultivation and reseeding. By top dressing we get very good crops of alfalfa, clover and timothy.

The Old Question of Exercise

Of course, my mind is chiefly in this case, running along lines of exercise, an old, old question, but ever new. I am pretty well convinced that milking cows, kept clean by clipping over the entire body and dry cleaned once each day and washed twice each day and fed a balanced ration in an ideally ventilated stable do not need a few minutes out of doors each day in order to maintain health and strength.

We do turn them loose occasionally to see if there are any kinks in their behavior, which can be noticed about as well when standing, but especially to notice the breeding time that often passes unnoticed in the stable.

Clean Cows More Contented

The cows in full flow rarely run a race. Those later in gestation, when the milk flow is down, do frisk around if they are of the muscular kind. Again we are moving cows from dry barns to milking barns frequently and those that have stood quiet, milking, seem as strong and vigorous as though trained for action. I am not, however, equally as well satisfied with close, quiet stabling for dry cows. I know that the care of dry stuff in no way compares with our care of milking cows. The one fact that they are not kept clean as are those milking, will make a difference in their action. I suppose cows have feelings akin to humans. I know very well if I do not have clean underclothing or wash my back bone once or twice during

the winter my general feelings are not quite normal.

Did you ever examine the skin of a cow with long hair and no cleaning by any method, especially on her back, and observe how quickly she will show her appreciation by some action with fingers or curry comb—then clip the back, brush it clean and watch the improvement. I don't mean that this will follow with every cow. One having very short hair, lying close to the body will need less attention. Good ventilation will also make for a better feeling, provided it is not obtained by freezing temperatures.

Nature Teaches A Lesson on Cleaning

We accept without argument that dairy cows look their best in June when judging them as a whole throughout dairy section. Cows are frequently turned to pasture not in the best appearance by any means and they will so change in a couple of weeks as to quite lose their identity, not all due to their excellent feed by any manner of means, that is the biggest factor. But from rains and general weathering, plus their own effort there goes on a housecleaning on the outside that makes for clean skin pores. Nature provides animals with power of elimination by excreta, air from the lungs and through the skin. In either case if passage became clogged or frail in any way to function freely, trouble begins. One must always take into consideration all of the factors in any case when drawing conclusions and so with the exercise problem we must do the same * * *

Harold Powell said that cooperative marketing was an economic necessity and until it was, not much could be done.

The work in California was started because there were no adequate markets nearby into which farmers could go with their produce and independently they could not go 3,000 miles. It was work together or quit and that was all there was to the thing. In the East, the reverse is true—markets we have at our very doors and the best ones in the world. There is not a single product that I know of in the Eastern states but what someone will come to our doors to buy. By working together we might get a trifle more for it, but then again, has not the gain come partly from improving the quality than from selling together?

I once received a letter from a farmer, a large one, a business man, a quality man through and through, who was debating whether or not he could afford to give up his own independent marketing and go in with the crowd. He had quality, character, business and markets came to him. We have hungry nearby markets. We are however, starving for a work together spirit and action in matters on our own farms.

Cooperation Problems Local Ones

May I compare cooperation with taxes. Our taxation problems are the local ones, they are not State or national, and so are our cooperative ones. I refer at this time, to only on, feeds for our cows—I have a solution, I am sorry to say. But as never before, it is a serious matter for dairy men producing milk at current fluid milk and for manufacturing prices to buy feeds at retail or even wholesale prices and make a profit on the feed. They may get pay for family labor out of the deal if careful and saving. At the same time that \$40 to \$50 a ton is being paid for rations, milk is selling for a like price per ton and acres and acres of idle land in the East are yearly becoming more idle. Here is an economic necessity.

Cockle Poisonous to Hens

HENS fed liberally with wheat screenings in which there was a large amount of cockle have been reported as poisoned by the cockle. The cockle is said to affect the nervous system, causing a paralysis of the legs.

F.O.B. Detroit

You Pay For a Fordson Whether You Own One or Not

You pay for it in extra time and labor required to do your farm work without a Fordson;

Pay for it in injury and strain to horses, caused by putting them on work that could be done more quickly and easily with mechanical power;

Pay for it in smaller acreage tilled; in land less thoroughly cultivated, due to bad weather, holidays and lack of help; Pay in extra time required for the

hundred and one jobs that steal time from money crops.

A Fordson is portable power that pays for itself many times over. It costs more to be without one than to own it.

For wood cutting, manure spreading, feed grinding, clearing land, pulling out old fences—in brief, for mobile power when and where needed, a Fordson is the best investment you can make in farm machinery.

65,000 Kellys' Fruit Trees**Were Certified True To Name By The MASSACHUSETTS FRUIT GROWERS' ASSOCIATION**

These disinterested experts placed a lead seal on each tree. The seal is attached permanently through one of the limbs—to STAY THERE until the tree bears True to Name Fruit, as guaranteed by us.

Kellys' Trees are Sold By Height and Caliper

Every tree is guaranteed up to grade specified or better. Not sold by height only, as frequently second or third grade trees are equal to first by height OR caliper. We grade and sell BOTH by height AND caliper. This is the only way that gives entire satisfaction to the planter.

45 Years in This Business Means Safety to You

There are five Kelly brothers. Each is head of a department and supervises expert nurserymen. We have sold many thousands of fruit trees in the past 45 years. Many of these are growing near you. Ask us the names of the owners. Visit them. Ask them about their dealings with Kelly Brothers. There is no better way to find out the kind of trees we have been selling to your neighbors. We will treat you with equal fairness.

Scientific Handling Makes Continuous Success

From their earliest beginning, until you get them, Kellys' Fruit Trees are continuously treated with the most careful attention and according to the most approved and modern methods that science has been able to discover. Our trees are propagated on whole roots, imported seedlings, and not by grafting on piece roots. This insures the heavy fibrous root system that is so essential to first-class trees.

We plant seedlings on upland ground where there is good air drainage and thus we are certain that the trees will be perfectly hardy and absolutely free from injury of any kind.

We have a large frost-proof packing and shipping plant with our own railroad siding, so that stock is never killed by lying on station platforms waiting for cars. We guarantee the arrival of stock in good condition.

Send for Handsome Illustrated Catalog—FREE

Profusely illustrated and giving complete information and prices of all of our True to Name and Certified Fruit Trees, Berry Bushes, Garden Roots, Evergreens and Ornamental Trees, Shrubs and Hedges. Catalog also gives a lot of useful experience about planting trees that will help you.

Remember that orders are filled in rotation as received, so get your catalog quickly so that you can have ample time to order early.

Raspberries Up-to-Date**There is Room For Them On Most Every Farm**

RASPBERRIES are nearly as easily grown

By DAVID STONE KELSEY

is best and cheapest every 3 rods along rows, and on the

as corn, and the results do not record as many crop failures—where the thoroughness of good corn culture is applied to this delectable fruit. Of course there is no profit the first season. The first full crop should come the third year, and for the next eight to fifteen years. Unless root-gall has been introduced with the plants, there ought not to be more than one or two missing years.

No trouble about markets either. Your market is next door, at almost anything per pint-basket. Unless you grow an acre or more, your own town and nearby villages will consume them all, and the city markets are never adequately taken care of.

A Chance to Diverse

At this particular time—when market conditions of our universal crop, whole milk—are forcing every farmer to reconsider "diversity", why not remember the well-paid employees living almost in sight of the cow pasture whose family almost never taste small fruits?

Fifty bushels is supposed to be a bumper crop of corn. Figure the sale price of this corn at 13c a pint wholesale—the picking costing 2c, and the basket and crate 1c—\$300 net, and it is difficult to find ways of spending more than \$100 per acre per annum on a raspberry field that should average to yield 5,000 pints of saleable fruit.

However, no man can attend to his farm work while picking and marketing small fruits upon a profitable scale. He must have special help for this or berry growing will be a failure. The size of his plantation must be governed (after he has acquired experience) by the amount of help available—women and girls who really need the money and have been found reliable.

Plantation Management

In these days of fad—especially fads of pruning—the raspberry has not escaped. So-called European methods, introduced by immigrant farmers, perfectly applicable to Old World intensive farming on moist, deep soils, are dangerous fashions here. We have done our share of experimenting, but for 100 bushels of big, red, hard berries per acre, we still stick closely to the Erie County and Hudson Valley methods as follows:

Seven-foot rows extending east and west on moist, cool, well-drained, rich land. Plants (of extra vitality) 2 to 2½ feet in the row, set in early fall or early spring (never set a weak plant—weak in growth, constitution, or from exposure). The land is always early fall-plowed, already fallow, and cross-plowed either in November or at the earliest possible moment in spring, and harrowed unmercifully. Next furrow out deeply at 3½ feet, planting every other row to early potatoes, tomatoes or other low crop.

Acme Harrow a Valuable Help

Cultivate every five to ten days shallow, level and close to the straight rows of plants. An Acme harrow is best after the first year, used with one horse, the man walking and guiding by handles, as with an ordinary cultivator. If too wide, hacksaw off ends. It is about the only machine that will work close enough to plants without injury. Give clean culture, suckers and all—they are but weeds. If the patch gets the start of you during haying, subdue with some narrow, harsher cultivator first—then the Acme.

Eight to eleven months after setting we set heavy 3-foot stakes (cord-wood

tops of these string one tight wire, 10-gage, well galvanized. Then tie the best four to six canes to wire singly. A soft, cheap iron wire makes the best tie. If you have deep or drifting snows, better do this in late fall, but otherwise they will winter-kill less if left lying on the ground till spring.

Prune in Early Spring

We never prune in fall. Any time after March 1st is safer, cutting everything back to within 6 inches of wire and "laterals" back to 6 inches from main stalk. By this means your berries are all up, away from interference with cultivating, etc., and can be picked quickly and comfortably. Every year thereafter, prune the same. Start cultivators early, and fertilize liberally each year, dividing the applications, part in April (or any time during fall or winter, if stable dressing) and part soon after picking, formula 4-8-10. This method facilitates rapid and clean culture, good light and air drainage, the biggest, hardest fruits, at exactly the right height for rapid picking.

For Black-Caps

The same general culture, except that summer pruning must be added—by pinching end of all strong canes at 2 to 3 feet from ground for a wide head. The laterals thus forced we prune in March (after tying like the reds) about 6 inches long. The quickest way to "pinch" new black-cap canes is to knock the tip off with a swift, short blow. It must be quick, because they almost invariably steal the march on one and get too long. They will grow 10 or 12 feet and not spread, if let alone. What is wanted, is to increase the bearing surface of your black-caps, and you must give laterals plenty of time to grow and mature.

Discussion of Varieties

The following red are named approximately in order of ripening: June, Perfection, Marlboro, Herbert, Latham, Cuthbert, St. Regis. The St. Regis is a so-called "ever-bearing"—that is, it has one crop on the old canes in the spring and another crop on the new canes in the fall. The fall crop is usually small and the quality of the berries is not high. It is worth trying in the home garden, however. Of the spring fruiting sorts the June or Perfection should be planted for early, the Herbert for midseason, and the Cuthbert for late. The Latham is a new, late variety. Its season of ripening is about the same as that of Cuthbert and very hardy.

Cumberland A Good Black

The Cumberland and the Plum Farmer have proved to be among the best black raspberries. No purple variety has yet been found which surpasses the Columbian as an all-round home-garden variety. It is very prolific, of good quality, and wonderful for preserving.

The raspberry of ten years ago is not the raspberry of today. Many improvements have been made in this delicious fruit, and new and better varieties are now grown, both in commercial plantations and the home garden.

One of the best of the newer varieties originated at the state experiment farm in Minnesota, and was designed to endure the rigorous climate of that state, first Minnesota No. 4, but now renamed Latham. It is being widely planted, and produces large crimson fruit which is firm and of excellent quality. The berries do not cling to the stems nor yet drop easily. The bush is perfectly

How Things Look In Other States

(Continued from Page 71)

modities. The shortage is not likely to be made up next year, in view of general employment at high wages, revived buying power in Europe, and moderate planting and breeding plans on the part of our own farmers. That will mean at least a year of fairly satisfactory prices.

If we take advantage of this breathing spell to pay off some of our debts, to plan for a balanced production that will avoid a burdensome surplus of any one crop, to perfect our cooperative marketing enterprises, and to put production on the most efficient and economical basis possible, a long period of good times for agriculture should be assured. The establishment of a government export corporation to handle the exportable surplus would add certainly to this prediction.—C. V. GREGORY, Editor of *The Prairie Farmer*.

* * * *

Highlights from the Northwest

THE agricultural troubles of the Northwest have been prominently featured throughout the country during the past year and this publicity has not truthfully portrayed the exact status of farm conditions. A single year of bountiful production in this section have greatly changed both agricultural and business conditions. At this time the people of the Northwest are looking forward hopefully to another New Year, confident in the opinion that agricultural conditions are distinctly on the mend.

One year ago Northwestern farmers were keenly interested in prospective legislation that would restore prosperity to agriculture. Within the year farmers have arrived at the conclusion that the destiny of agriculture is in their own hands. Consequently, they have turned their attention to a constructive program for Northwestern agriculture. This program includes three features. First, the greater diversification of crop production, second, a more efficient production, and, third, the development of a more businesslike system of distribution for the marketing of their crops.

This is not a program of words, but of action. It is quite safe to say that greater progress in diversification has been made within the past year than was made in the past five years. Minnesota, for example, has doubled her acreage in alfalfa in a single year, and alfalfa is merely the barometer of a general trend toward diversification and a larger use of livestock. The dairy industry has made tremendous strides during the past year throughout the Northwest. In the matter of efficient production, farmers paid particular attention this year to the use of labor saving machinery, cooperative effort with neighbors for the purpose of eliminating labor, the developing of cow testing associations for the purpose of adding efficiency to the dairy herd, and making other improvements that are based on the idea of producing a larger revenue per acre per farm.

In building a better system of diversification, farmers have seized upon cooperative marketing on the commodity basis as one of the ways out for agriculture. In Minnesota, for example, the potato growers, 15,000 strong, have built up the largest cooperative marketing association in the world handling a semi-perishable product. Another group of 15,000 poultry and egg producers have formed a sound cooperative marketing organization for the handling of poultry products. The milk producers and the livestock growers have added strength to previously existing organizations. The Northwest is putting characteristic enthusiasm into cooperative marketing, which means that results will follow.

These are the high lights in the agricultural progress of the Northwest during the past year. While fully understanding the basic problems of agriculture, Northwestern farmers are going to do what they can to speedily put agriculture in this section upon a permanent basis.—DAN A. WALLACE, Editor of *The Farmer*.

Increased Fruit Crops?

Here's the modern, Scientific way

AUTRORITIES agree on this—

That nitrogen (usually termed ammonia) is the most effective of all orchard fertilizing agents. It assists the vigorous wood growth so necessary to the formation of fruit spurs and fruit buds. In addition—

Experience has proved that nitrogen starvation is at the bottom of many scanty yield or early falling of the fruit. An early application of quickly acting nitrogen will frequently increase the yield two or three fold.

Don't starve your orchards—you're the only one who loses. Two weeks before blossom time apply Arcadian Sulphate of Ammonia (100 to 150 pounds per acre).

Arcadian Sulphate of Ammonia is kiln-dried and screened to make it fine and dry for top-dressing purposes. Ammonia 25% guaranteed. For sale by leading fertilizer dealers.

Important Bulletins Free!

These bulletins: No. 3—Fertilizing the Prune Orchard, No. 8—Fertilization of Peaches, and No. 10—Fertilizing the Apple Orchard, show how fruit growers have increased their yield and profits.

\$25 Down Buys Holstein Bull

A Grandson of
Dutchland Colantha Sir Inka
And
Hengerveld De Kol

This young bull enhances the blood of extremely large producing and transmitting animals from every side of his pedigree, in long time, as well as short time work. The sire has a very exceptional list of large producing daughters, and he is from a 30-lb. four year old daughter of Dutchland Colantha Sir Inka, the greatest transmitting son of Colantha Johanna Lad. The dam has a 21-lb. three year old record, and her sire is from a 30-lb. four year old.

Have a Successful Garden—Buy Seeds from the Grower

HARRIS SEEDS are used by the best market gardeners because by careful selection and breeding we have wonderfully improved some varieties. Private gardeners can obtain better results because all varieties are tested and the percentage that will germinate is marked on the label so you can tell just how many will grow before you sow them. Harris is the Seedman who tells you the result of his tests. Send for our free Catalog. Illustrated in color it contains many interesting and unusual suggestions for your garden. We will gladly send it free on request. We are large growers of

Fruit, Vegetable, and Flower Seeds

Gladiolus, Dahlia and other bulbs and many flowering plants. Our catalog offers you the opportunity of buying seeds of a very superior quality direct from the grower at wholesale prices. It will pay you to ask for the catalog today.

JOSEPH HARRIS COMPANY,
R. F. D. 12, Coldwater, N. Y.

HARRIS SEEDS

Raspberries Up-to-Date

(Continued from Page 74)

hardy, tall and a robust grower. It requires the same conditions that corn or suckers very freely, so that a good sized plantation can soon be obtained from a small beginning. In the colder states this is bound to be popular.

Another new berry of promise is Ontario, distributed from the New York experiment station at Geneva. The plants are remarkably strong growing, with unusually large canes, seeming absolutely hardy, and bear well flavored highly colored berries. The fruit is considerably larger than that of Latham, and plants do not sucker so freely.

King is favored over a large part of the country. It is not as hardy as Latham or Ontario, yet thrives in most sections. In colder states where it is grown it is laid down for winter. King has one fault. The fruit drops and crumbles unless kept closely picked.

New Everbearing Raspberry

A fall-bearing raspberry which has received much notice the last year or two is called LaFrance. LaFrance is high in price, yet but only one or two are needed to give anybody a start, as suckers come in tremendous quantities. The plant grows almost like a tree, and the berries are remarkable for their size. They have good flavor and are borne freely if the plants are given hard pruning in the spring and the suckers kept down. Probably the best results come when little attention is given to the spring crop, the plants being run especially for the fall yield.

Erskine Park is another heavy bearer which produces many laterals and makes a good crop. The vines have a straggling habit, however, and the color of the fruit is poor, but it has a spicy flavor which appeals to many people.

For a berry to can it is hard to surpass the Columbian. The purple berries may not be very attractive, but the flavor is good. This variety does not sucker, but is increased by tip rooting so that it can be handled readily in even a small garden.

Enemies We Must Fight

Of the insects and diseases which are troublesome, the most serious are crown gall, anthracnose and mosaic. Crown gall is easily recognized by the galls or knotty growths which appear at the surface of the soil on the roots. Only plants free from the disease should be planted. All plants showing galls should be gathered and burned. If the patch is badly affected, start a new one on new soil, using new plants.

Anthracnose can be noted on the young canes in the summer as purplish colored spots near the base of the canes. Spraying with lime-sulphur or bordeaux is helpful in controlling this disease. Burn the old canes immediately after fruiting for both anthracnose and mosaic.

Keep the Cultivator Going

In planting do not take too much pains. Have an apron made so as to form a sack. Put the plants into this with the roots to the right. Use a short spade having a narrow blade. Hold it with the back from you and crowding it into the ground with your foot, push the handle from you. Insert a plant, withdraw the spade, and firm the ground with your foot. A good man has no trouble in setting plants at the rate of 300 an hour in a perfectly straight row.

Keep the cultivator running and the surface soil light and loose, throughout the season. Give each plant a liberal application of a fertilizer that is rich in potash and phosphorous, but if the ground has received a good coating of stable manure, nitrogen will not be needed, but apply potash and phosphorous annually.

Likes Good Corn Soil

The raspberry will grow and produce some fruit upon a soil so dry and sterile that it seems as though no plant could live through the summer. But, to do its best,

it requires the same conditions that corn or potatoes do. Any soil that will grow good corn is ideal for the raspberry. It will live without cultivation, and so will potatoes. And, if it will pay to grow a crop of potatoes under such conditions, it will also pay to grow raspberries and golden rod upon the same ground and at the same time, but not otherwise," says Ormsbee.

Feeding the Plants

Assuming that the moisture supply is what it should be, whenever the canes become brittle, or soft and limber, or fail to ripen as they should, it is an indication that the plants are not receiving an adequate supply of potash. When they fail to produce blossoms and to set fruit as should reasonably be expected, it is an indication that the bushes are not assimilating the phosphorous that they should. And if the foliage is thin and scanty and the leaves small and light colored and little growth is being made, it is an indication that nitrogen is lacking. If opposite conditions prevail, the converse is true, and the corresponding elements should, in a measure, be withheld.

Hight Points to Bear in Mind

It pays to sow a substantial cover crop at the last cultivation. We sow a mixture of several, that always includes three or four ounces of Cow-Horn turnip seed—because they stand up out of ground and greatly help to maintain a shade-mulch and hold the snows in place, and a pound or two of Russian (winter) vetch. This last is the only plant of the mixture that lives through the winter. We consider hairy vetch a blessing the year round, and all over the farm, anywhere.

In planning a patch make as few rows and as long rows as possible, but leave cross aisles every one hundred feet and if there are more than twenty rows, omit every other tenth as a driveway.

Cultivate Some More

Cultivate deeply immediately after the tramping or picking season, also at first cultivation in spring, but otherwise (unless this job gets the start of one) shallow and frequent cultivations that "work" closely up to each side of the row.

Pinch caps early and don't prune red berries at all until spring. Summer pruning does not "spread" their tops—only makes their suckers ever worse, and obliterates the fall-crop of ever-bearings.

Keep an experimental plot of every promising kind, growing side by side with your field. It will tell you what to put in next time.

If you haven't suitable plants, let setting go by a year, and if you haven't suitable ground, let the other fellow grow them.

Pick over same rows three or four times per week—women and school girls should do this work at 2c per pint-basket.

Some Don'ts To Watch

Don't let reds spread. Treat all suckers as weeds, confining growth to the immediate crown originally set.

Don't grow either kind in hills. Narrow, thin (10-inch) straight hedges, 7-feet apart are best.

Don't cultivate deep, nor let ground crust over.

Don't set weak plants—nor any—in dry ground.

Kill a Kow!

I will be glad to cooperate, providing at least one thousand other dairymen will do the same, in selling or killing FOR BEEF PURPOSES at least one of the poorest producers in my herd between now and March 1, 1925.

Feeding The Dairy Calf

Are Inbreds Eligible To Registry?

IN YEARS gone by I have raised many calves, using various methods, have used also many kinds of feeds, meals, etc., all calculated to get results. Did I always get results? No. Some of the feeds were genuine failures, so far as raising calves were concerned. Others were fairly good, but there is always a better way to do things, even around the dairy barn. This bit of experience has been worth much to me, I am sure.

The one method which has always given best results in raising calves and at a moderate cost, which, too, is important, has been to take the calf away from the cow at once. The calf is given dry, clean quarters, free from all direct drafts, and this is especially important in winter months. A coarse sack is cut

the smallest unit of manufacture of any branch of the dairy industry, yet 34.3 per cent of the cheese is factory made. Only 3.7 per cent of the annual milk production is made into cheese. In 1922, 3,749,800,000 pounds of milk were absorbed by factories—25,334,000 pounds less than were used in 1914.

There was a tremendous boom in the condensed milk industry during the European war. By 1919 the volume of exports totaled 852,865,414 pounds, or forty per cent of the total manufacture. In 1922, 3,578,372,500 pounds of milk were tinned in the form of condensed and evaporated milk, while 369,728,000 pounds of milk were powdered. Nearly 90 per cent of the condensed milk made is manufactured in eight states—Wis-

CREAMERY	CHEESE FACTORY	CONDENSORY	ICE-CREAM PLANT
			
23.6% 24,223,815,000 LBS. of our annual milk production goes into creamery butter.	3.6% 3,749,800,000 LBS. of our annual milk production goes into cheese.	3.5% 3,578,372,000 LBS. of our annual milk production goes to condensories and evaporated milk plants.	3.5% 3,623,400,000 LBS. of our annual milk production goes to ice-cream plants.

Factories Use 37.5% of Our Butter Fat.

and put on the calf if the weather is severe, good bedding supplied, then it is given the mother's milk, four or five pounds, depending on the size of the calf, to a feed, this is gradually increased to six or seven pounds, feeding twice a day for the first two weeks or sometimes a little longer, when I change to skim-milk. This milk is never fed cold. That is injurious to any calf at any time. The calf is given a little clover hay or alfalfa from this time on. A little silage is fed with a trifle of bran in it or some good meal.

Fifty pounds of silage and four or five quarts of bran, one pint of cottonseed meal, all mixed together will be enough for about four average sized calves of two months old, one feed in morning and another of the mixture at night, besides the skim-milk evening and morning until ten weeks old, then I feed one meal of the skim-milk, preferably at morning, until the calves are at least four months old. After this time the milk is discontinued and the calves will have developed to a point where with ordinary care, they will continue to grow and thrive nicely. They are always supplied with clean, pure drinking water. Some calves will not drink much water, then, again, others once trained, will require much of it and especially in the spring months.

Since I have adopted this plan of feeding, I have never had a calf sick on account of scours or from any other trouble. They are better calves than those on the cow, especially calves that come in winter months.—E. S., Pennsylvania.

The Milk That Factories Take

FACTORIES absorb over 34 per cent of the American dairy cow's yearly milk production. More than three-fourths of this amount is turned out as creamery butter, according to the Blue Valley Creamery Institute. The amount of milk used as creamery butter is steadily increasing. To supply the demand of creameries in 1922 required 24,223,895,000 pounds of milk, 7 billion pounds more than were used in 1914. The distribution of milk into the various manufacturing processes is shown in the accompanying cut. Cheese factories are

consin, New York, Michigan, Pennsylvania, Illinois, Ohio, Washington, and California.

Are Inbreds Eligible to Registry?

"A neighbor sold me a four-day old bull calf for \$15, telling me he was eligible for registry. I fed the calf whole milk for six months, then skim milk and grain, but he did not seem to develop as he should. He is now 2½ years old and have used for service this summer. He looks like a scrub and this neighbor's tenant tells me that the sire of both this bull and his mother were both the same. Are inbreds eligible to registry? If not what recourse have I?"

"A man's horses feed all night in my corn and truck patches. What is the lawful thing to do? Can I set my prices for damages and collect from him if he calls for them before I have time to advertise? Can I post my own advertisements or must a lawyer fill them out? Should I deliver to him upon payment of damages before consulting lawyer? I would appreciate receiving this information."—Mrs. R. S., Montgomery County, N. Y.

YOUR inquiry concerning the purchase of the calf is interesting, and we are sorry that no redress is available to you. In the first place, inbreds are eligible to registry, and where an animal is so eligible, the sale should be consummated in such a way that the seller is to have the animal actually registered. In your case, the animal was so young that the seller cannot be held for its failure to develop.

In buying purebred stock, an individual should ask for a pedigree of the animal. This pedigree will show the ancestors of the animal, its sires, dams and grandparents, back at least four generations. It will also show the productive capacity of each female in the family, and any relations of the sires that may be of interest as producers.

Where such pedigree is not required, and where registration is not made, the purchaser in a case like yours assumes the risk. And since more than two years have elapsed since you made the purchase, any action that you might have had on the grounds of fraud is barred by the Statute of Limitations.

Upon your second inquiry, your only redress is an action for damages caused by the trespass of your neighbor's animals. A threatened suit will probably rectify the difficulty.

REBUILD Your Old Silo Into a New Craine!

Is your stave silo weakened, twisted, tipped or collapsed? Now's your opportunity to *rebuild* it into a handsome, strong, durable, Craine—the Silo of Giant Strength—at half the cost of a new silo.

Then you get all the advantages of the famous Craine three wall construction—a structure absolutely water tight, frost resisting, weather proof and there to stay. Once up, you can forget it—no lugs or hoops to tighten. An inside wall of fitted upright staves, a wall of water-proof, "Silo felt," then an outside wall of handsome, strong, spiral Craine-lox covering that binds, cross supports and holds every stave rigidly in place.

Craine Silos make good silage and keep it good! Get all the facts today; address

New York Farm News

High-Lights at the Fruit Growers' Meeting

DISEASE and insect control was the main subject of discussion at the annual meeting of the 70th annual convention of the New York State Horticultural Society, at Rochester. If all fruit growers took heed to the recommendations concerning the control of these pests, many would face extinction.

The display of fruit in Buildings 4 and 5 at Edgerton Park was magnificent. The fruit display this year was twice as large as last year. The judges had no easy task getting through with their assignments, the fruit being so numerous and of such excellent quality.

Much interest was centered around the exhibit of G. K. Bell of Henrietta. It was a non-competitive exhibit by an 80 year old grower. Mr. Bell received many congratulations on his display. He won several awards in the pear classes.

Lieutenant-Governor Lowman was the guest of honor. He expressed himself quite firmly in favor of a fruit building at the State Fair.

Lew Toan mixes cows and apples. He is president of the New York State Guernsey Breeders Association. But during the annual he was superintendent of the show.

M. C. Burritt was on hand. Since "M. C." has been back on the home farm he looks anything but a college "prof." He is trained down to a fine point.

R. P. McPherson did a very neat job putting on the show this year. His was a gigantic task, but he got away with it wonderfully well. That smile is a big factor. It helps when dues are being collected.

In looking over the crowd we saw many familiar faces, "old timers" at the annual. They included E. Morrell, Kinderhook; Sam Fraser, Genesee; Grant Hitchings, Syracuse; W. S. Teator, Red Hook; H. E. Wellman, Kendall; Will Hall, Lockport; C. H. McClew, Newfane; E. C. Gillette, Penn Yan.

Up to the time we went to press no information was available as to who was to be president for the coming year. Charles S. Wilson, the present incumbent, has served one year as president and most of the year preceding. When he succeeded, as vice-president to the presidency on the death of J. B. Pease of Gasport. According to the constitution, no president may hold office for more than a two-year term. Friends of Mr. Wilson says he was actually president only one. Mr. Wilson was non-committal concerning his candidacy when the matter was broached.

The commercial display of orchard equipment was unusually complete. It included sprayers, dusters, apple graders, corers, spray chemicals, barrels, boxes. In fact everything connected with the apple growing game was exhibited.

Cyanogas, the trade name for Calcium Cyanide, was electrically flashed at the booth of the American Cyanamid Company. Cyanogas is a new effective and economical dust for the control of Apple Aphis and Pear Psylla.

"Buy Trees with a Reputation," said Kelly Brothers booth, which was attractively decorated with nursery stock certified by the Massachusetts Fruit Growers Association. Stark Brothers Nurseries was represented by a large exhibit of nursery stock.

The Niagara Sprayer Company had one of the largest displays at the show, describing the use of dust for fruit and vegetables from almost every agricultural section of the country. At one corner of the Niagara booth dusted apples grown on

In the discussion of fruit trouble "Old Man Weather" came in for more kicks than any one else. The late spring and general contrary weather conditions helped disease development more than usual.

Prominent County Agents Move On

Two of New York's most prominent and well known county agricultural agents have resigned their present positions to "move along." V. A. Fogg, Manager of the Chenango County Farm Bureau, has accepted a position in the Organization Department of the G. L. F. to take effect on or about February 1st or as soon as his successor can make arrangements to take his place. His successor is Kenneth D. Scott, better known as "Scotty," who is at present the Manager of the Warren County Farm Bureau. Mr. Fogg has been with the Chenango organization four years coming next May. "Scotty," we believe, has been in farm bureau work in New York longer than any other agent. He will be succeeded by S. H. Fogg of Warrensburg, who has been acting as blister rust agent in Warren County.

New York County Notes

Dutchess County—We have certainly had an open winter as far as the snow goes, only an inch or so falling at a time. The ice crop is being harvested, the cut measuring anywhere from 11 to 14 inches in the western part of the county. Much woodland is being cut off. Farmers are getting \$2 a cord. Eggs are selling for 80c. Butter is scarce among farmers, price 42c.—Mrs. H. J. H.

Ontario County—The weather during the Christmas holidays in Ontario county was the coldest we have had in years. We have had very little snow as yet. Not enough for real sleighing. A few have used cutters, but the practice is not general. Wheat is very much exposed to the elements and the tops are small. Farmers are not very optimistic. Wheat is now bringing \$1.75; corn, \$1.50; barley, \$1.68; bran and middlings each, \$35 a ton. Pea beans, \$6.50 per hundred; red kidneys, \$8 per hundred; yellow eyes, \$6 a hundred. Potatoes are only bringing 40c, and they are sorting out badly. Cabbage is being taken out of storage at \$15 a ton. Butter is bringing 50c, and eggs are 50c. Pork is worth 11c on the hoof; lambs, 14c. The hay market is dull.—E. T. B.

Delaware County—Many farmers are getting out wood and taking it into town. The snow we had on January 2 added to what we already had made good sleighing. The recent spell of cold weather made ice cutting possible and the ice harvest is now on in full force. Ayer McKinney at Delhi paid \$2.25 for November milk, only 10c over the October price. Feed prices are still soaring, bran costing \$2.10 a hundred; gluten, \$2.50 a hundred; ground oats, \$2.65 a hundred; cracked corn and corn meal, \$2.85; poultry grains and whole wheat, \$3.25; cotton seed meal, \$2.85.—E. M. N.

Tioga County—Before the cold wave struck Tioga County on the 20th of last month we have had some winter weather. Since then we have had quite a little snow which has just made sleighing possible in some parts of the county. Lumbermen and those who have timber they wish sawed for building purposes were well pleased with this snowfall as they were able to get logs to the mill with much less labor. Before the cold snap visited the country we had several days rain that furnished an abundant supply of water. Quite a scarcity of water in several localities. Although the price of milk has been advanced farmers are not yet satisfied as it is not up to the cost of production.

—Mrs. C. A. B.

They wear

There are "extras" throughout the entire construction of the Hood Red Boot. Extra thick soles of tire-tread rubber—red uppers which have set a new standard for life without checks or cracks. Extra reinforcements where the greatest wear comes. But the big, outstanding extra is WEAR—extra wear under all conditions.

You can take WEAR as the symbol of Hood Service. The Kattle King—Hood Arctics—White Rock Rubbers—cut down shoe bills by giving longer wear. All with greater foot comfort and finer appearance. Use the name Hood as your buying guide. It is a time tested guarantee of design, materials and workmanship.

CHEVROLET

New

New value—new quality—a new line of Chevrolet models far better than ever before. The public has recognized that Chevrolet represents a high standard of quality at low cost. As a result Chevrolet has become the world's largest producer of automobiles with standard three-speed transmission. Now this Chevrolet quality has been greatly increased. The new Chevrolet embodies quality features such as you would expect to find only on cars of much higher price.

New chassis—with a larger, stronger frame; new semi-elliptic chrome vanadium steel springs; new and stronger front axle; completely new rear axle of finest construction—banjo type with one piece, pressed steel housing and greatly strengthened gears; improved fully enclosed, dry plate disc clutch which requires no lubrication; extra heavy brake bands on big 11-inch brake drums; a new and easier steering mechanism and many improvements on the famous Chevrolet motor.

New bodies—of even greater beauty and comfort. Open bodies are longer and have new windshield with very low bottom panel, rubber weather stripped. All models have cowl lights and new instrument board refined and cut away for more leg room. The new radiator is of more beautiful design, made of non-rusting airplane metal. All closed models have new and exceptionally beautiful Fisher bodies with the new VV type closed body one piece windshield and automatic windshield wiper.

New finish—all models are now finished in Duco, the new finish that retains its color and lustre almost indefinitely and withstands very much harder usage. Here, again, is a quality feature hitherto not found in other low-priced cars. The new Chevrolet open models and coach are finished in rich dark blue—on the sedan is used a beautiful aqua marine blue for lower panels and hood, upper panels in black—coupe with lower panels and hood in sage green, upper panels in black.

Disc wheels and balloon tires optional at small additional cost

Reviewing the Latest Eastern Markets and Prices

MILK PRICES

THE Dairymen's League Cooperative Association announces the following prices that dealers will pay the League during the month of January for milk testing 3% in the basic zone of 201 to 210 miles from New York City. It is to be understood, of course, that the prices mentioned below are not received by the farmer, but go into the pool. They represent the prices dealers pay to the League.

Class 1 Fluid milk	\$3.07
Class 2A Fluid cream	2.10
Class 2B Ice cream	2.25
Class 2C Soft cheese	2.15
Class 3A Evaporated whole milk	

Cond. whole milk	1.90
Class 3B Whole milk powder	1.85
Class 3C Hard cheese other than	

American 1.65
Class 4 prices will be based on butter and American cheese quotations on the New York market.

Sheffield Producers

The Sheffield Farms Producers announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$3.07
Class 2	2.20
Class 3	1.75

Class 4 prices determined by butter and cheese quotations on the New York market.

Non Pool Cooperative

The Non-Pooling Dairymen's Cooperative announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$2.80
Class 2	2.20
Class 3A	1.80
Class 3B	1.75

Interstate Producers

The New York State Milk Producers Association (Philadelphia Price Plan), announce the receiving station prices or the price to the farmer in the 201 to 210-mile zone from Philadelphia for 3% milk is \$2.19. In the 101 to 110 mile-zone, the price is \$2.29.

League Announces December Pool Price

The Dairymen's League Cooperative Association announces that the December pool price is as follows:

Gross pool price	\$2.50
less expenses09

Net Pool Price	\$2.41
Certificate of Indebtedness10

Cash Price	\$2.31
This is the highest pool price since December, 1922.	

BUTTER TAKES SHARP DROP

The butter market has continued downward. Following the heavy storm on January 2, the decline in the butter market was more or less anticipated due to the difficulty experienced in trucking. However, it was expected that with the slight declines that have taken place a stronger buying market would be developed. Strange to say, this did not materialize. In last week's review of the markets we said that buyers and speculators were holding off for lower prices, but it was expected they would soon take an active part in the trading. However, they continued to wait for further reductions, and reductions have had to come.

Fresh receipts have been so heavy and storage stocks are so heavy that price cutting has had to be resorted to in order to move stocks. There is a heavy surplus of fresh goods on hand and considerable quantities of these fresh goods are going into storage. The fresh arrivals continue liberal and advices indicate increased production in some sections. However, the reduction in prices down to 39c for 92 score butter was responsible for much speculative buying and a temporary steadying of the market. How long this will continue we do not know. Actual consumption has not offered much relief as yet, not near enough to help steady the market. It is quite evident that retail prices are too far above wholesale rates to induce any increase in the demand. Even the chain stores have not cut their prices down to a point where housewives will buy freely of fancy fresh butter. There is much speculation as to whether or not the bottom has been reached. Gossip on the street

seems to indicate a steadier feeling. The two ends of the market must improve before we can find a firmer footing.

According to the New York State Department of Farms and Markets, creamery butter in storage on January 1 in Greater New York, amounted to approximately 10½ million pounds, while a year ago the amount of creamery butter in storage amounted to less than 4½ million pounds—some difference.

Creamery butter scoring higher than extra is now worth 39¼ to 40c, while 92 score butter is barely holding out at 39c. In some quarters it is being shaded as low as 38¼c.

CHEESE MARKET STILL FIRM

Trade continues satisfactory in the cheese market, and in general the tone is quite firm. Little or no fresh cheese is arriving and reports from the west are responsible for a rather confidential feeling here in New York. Held whole milk State flats that are fancy have advanced above last week's quotations so that now most of the business is being done at 25½ to 26c. Average run held goods are bringing from 24 to 25c. Fresh whole milk State flats have got to be fancy to bring 24c. Arrivals are not uniform and values are not well defined. Average run fresh goods are bringing in the neighborhood of 23 or 23½c.

FANCY EGGS LOWER

Fancy nearby eggs have weakened during the past few days to a point where they are somewhat nearer the value defined by Pacific Coast goods. The market has been very unsatisfactory during the past few weeks on fancy nearby whites. They have not been selling nearly as satisfactorily as medium grades. Furthermore, supplies of nearbys was a little bit more than the trade was ready to handle at prevailing prices. At the present time, however, stocks are cleaning up very well and there is a much firmer tone on all grades of nearby eggs.

One of the outstanding features of the egg market this week is the fact that nearby hennerly browns that are fancy are selling for 1 to 2c more per dozen than the fanciest grades of nearby whites. Fancy nearby hennerly browns are worth 66c.

LIVE POULTRY MARKET DULL

The live poultry market is having a very hard row to hoe these days. The embargo was responsible for a terrific upset, both on the buying as well as the the selling end. The consuming trade was scared off its feet, and people did not buy live poultry for fear they would get some disease. With the declaration of the embargo there followed a tremendous shortage of live poultry and naturally prices went up. Supplies are a little freer now. Express shipments have been heavier, some coming through from restricted territories, but of such quality as to pass inspection. With these freer supplies, prices had to come down. Prices have been higher than normal, and in order to clear heavier arrivals and avoid accumulations, prices have had to be shaded. As a result we have a weak feeling in the live poultry market. Values have tumbled so that now about the best price we can get for fancy fowls is 30c, while Leghorns vary from 24 to 26c. Chickens have got to be nice to bring 25c, while express broilers are worth from 35 to 38c. Nearby ducks are bringing 35c, and geese are 30c. Turkeys are in the neighborhood of 45c. Rabbits are meeting a very dull market and values have gone down to 20 and 25c a pound.

POTATOES ABOUT THE SAME

There is little or no change in the potato market. Country prices seems to be strengthening and are above a parity with New York City. Out in the country \$2 is the price being asked for potatoes in 150 pound sacks. All the city is willing to pay is \$1.85 to \$1.90—and there you are. Maine potatoes are being delivered in Harlem at \$2.15 to \$2.25 per 105 pound sack and there seems to be no end of them. In other words, the supply is ample to take care of the trade needs at existing prices.

The man who has potatoes in the cellar naturally wants to know what is going to happen. We have made inquiries in different quarters and here is the sum and substance of the opinion of several market men. This consensus of opinion looks reasonable to us. In short it amounts to this: (1) Any price advances will be temporary, for as soon as any increase is

made, arrivals will increase proportionately; (2) advantage should be taken of any of these temporary increases as long as the offer is at all reasonable; (3) March and April will soon be upon us and unless potatoes start to move soon the old potato season is going to close very, very weak; (4) keep potatoes coming steadily—do not dump them all at once, or the market break altogether.

There is food for thought in these opinions. It indicates that the potato market as it is, is none too strong and heavy shipments would undoubtedly cause a serious glut.

CABBAGE MARKET STEADY

The cabbage market is fairly steady. There is enough on hand to meet all trade needs. In fact, there is enough cabbage available to keep the present price of \$18 a ton F. O. B. fairly steady. There are some who are holding cabbage for \$30 a ton. As we see it, they are particularly welcome to take that attitude, but as long

The Market at a Glance

The following are the prices on the New York Market, at which farm products of special interest to eastern farmers, sold on December 24.

Eggs, nearbys (cents per dozen)	
January 14.	
lected	64 to 65
Other hennerly whites, extras	63 to 64
Extra firsts	62 to 63
Firsts	61 to 62
Gathered, 1 whites, first to extra firsts	61 to 63
Undergrades	59 to 60
Pullets	55 to 59
Hennerly browns, extras	65 to 67
Gathered browns and mixed colors	50 to 63
Butter (cents per pound)	
Creamery (salted) high score (93 score)	39¼ to 40
Extra (92 score) c.c.	38¾ to 39
Firsts (90-91 score)	38 to 38½
Firsts (88-89 score)	36½ to 37½
Hay and Straw, large bales (per ton)	
Timothy No. 2	24 to 26
Timothy No. 3	22 to 24
Timothy Sample	20 to 21
Fancy light clover mixed No. 2	23 to 24
Alfalfa, first cutting No. 2	26 to 27
Oat Straw No. 1	14 to 16
Beans (domestic, per lb.)	
Marrow	9¼ to 10¼
Pea	6¼ to 6½
Red Kidney	9¼ to 9½
White Kidney	9 to 9½
Yellow Eyes	—
Live Poultry, via express (cents per lb.)	
Fowls, colored fancy, heavy ..	28 to 30
Fowls, leghorns and poor ...	25 to 26
Chickens, colored fancy	25
Chickens, leghorns	23
Broilers, colored	38
Broilers, leghorns	35
Ducks, nearby	35
Ducks, Long Island	—
Turkeys	45
Live Stock (cents per lb.)	
Calves, good to medium	11 to 15
Bulls, common to good	3 to 4½
Lambs, common to good	14 to 17½
Sheep, common to good	3½ to 6
Hogs, Yorkers (200 lbs.) ...	10½ to 10¾

as the trade can get all the cabbage it wants at \$18 or \$20, it does not seem reasonable to expect an advance of \$10 or \$12 a ton in the near future. The cabbage crop was a heavy one this year, and when we balance the facts, we have got to watch our P's and Q's before we hold a whole lot for higher prices.

HAY SLIGHTLY OFF

The hay market was slightly off during the week ending January 17. Arrivals were a little more ample than the trade cared to handle, and with some accumulation, an easier tone was brought about. The market, however, is not over-supplied with choice hay. Choice hay in small bales does not face the handicap that the lower grades do, compared with larger bales. Real fancy hay is worth \$27 a ton, other grades varying downward.

WHEAT REACHES \$2 F. O. B.

Wheat has continued to advance in the market and now quotations on the F. O. B. market have reached the \$2 mark.

New York cash grain prices are as follows: WHEAT, No. 2 hard winter, \$1.99½; No. 2 red, \$2.13½; No. 2 mixed durum, \$1.99½. CORN, No. 2 yellow, \$1.44½; No. 2 mixed, \$1.43¾. OATS, white fancy clipped, 73 to 74½c; ordinary white clipped, 68½ to 70½c. RYE, \$1.64½.

Chicago cash prices: WHEAT, No. 2 red, \$1.99 to \$2.00½; No. 2 hard, \$1.86½. CORN, No. 2 mixed, \$1.25½; No. 3 yellow, \$1.23¾ to \$1.25½; No. 3 white, \$1.21¾. OATS, No. 2 white, 60½ to 61½c.

Local Buffalo Market on Feeds

During the week ending January 17 the local Buffalo market on feeds was as follows: No. 2 white oats, 66c; ground oats, \$45 a ton; spring wheat bran, \$35; hard wheat bran, \$36; standard middlings, \$38; soft wheat middlings, \$41.50; flour middlings, \$42; red dog flour, \$45.50; white hominy, \$54.25; yellow hominy, \$50; gluten feed, \$44.75; gluten meal, \$51.75; 36% cotton seed meal, \$41.50; 41% cotton seed meal, \$44; 43% cotton seed meal, \$46; 34% old process oil meal, \$46.50.

NO CHANGE IN BEANS

Trading continues along the same line as has been characteristic of the market during the past few weeks. There is no material change as a whole. Red kidneys are not only holding their own, but still continue their upward trend. Last week \$9.50 was the top of the market for red kidneys, while this week choice marks are worth \$9.75. Pea beans are holding their own, still bringing \$6.50, as they did last week. Marrows are quiet, bringing anywhere from \$9 to \$10.25, depending on quality. White kidneys are dull, bringing anywhere from \$8.75 to \$9.50.

MEATS AND LIVE STOCK

The live calf market continues quite firm, \$16 still representing the price on prime marks. Most business, however, is being done at quotations varying from \$13.50 to \$15.50. Some nice looking western calves have been coming in that sold at \$8.50 top. The market is slightly easier on live lambs. Recent arrivals have not been as fancy of late, and it has been pretty hard to get \$18.75 for choice marks. There is an easier tendency in the market as trading is less active. Hog arrivals have been quite liberal, cleaning up at \$10.50 with a few fancy lots bringing as much as \$10.75. Heavy hogs are worth from \$7 to \$7.75.

Country dressed veal calves are coming in quite freely. In fact the situation from the receiving end and consuming end is such that prices have eased off so that now country dressed veal has got to be fancy to bring 20c, and little is being bought at that figure. Most of the prime marks are turning at 17 to 18c, and common to good

Standards for Cannery Tomatoes

Grade Number 1 consists of tomatoes that are firm, ripe, smooth, well formed, and free from decay, with a diameter of not less than two inches. Grade Number 2, is the same as Number 1, except a variation of 3% in weight may be allowed below the prescribed size and not more than 5% variation from the other requirements.

Grade Number 3 consists of tomatoes that are fairly well ripened and free from molds and decay. Five per cent by weight may be allowed for deficiencies. Grade Number 4 consists of tomatoes which do not meet the requirements of any of the above three grades.

Proper grading provides a basis for contracts and purchases upon which buyers and sellers deal with mutual confidence and understanding.

Farm News From New Jersey

Agricultural Week at Trenton a Big Attraction—Pennsylvania Notes

IN SPITE of the bad weather and roads, New Jersey's Agricultural Week started off with a fair attendance and a large amount of interest, on Tuesday, January 13th. The big floor of the armory at Trenton was well filled with a very attractive farm exhibit. New Jersey's potatoes especially were well represented in exhibits that were worth studying. The poultry show was small, but good. There was some questioning among a few, however, about the advisability of holding a poultry show at this time when there is so much talk of the European fowl plague and an epidemic of poultry disease. New Jersey's large and active Baby Chick Association held a banquet Tuesday evening. At the Agricultural Show, the Forestry and Conservation Commission had an exhibit especially emphasizing at the time the development of farm woodlots. The affairs and interests of women were very much in evidence, there being good exhibits of the work of the farm home.

Federation of County Boards Elects Officers

During the day on Tuesday, the New Jersey Federation of County Boards of Agriculture, representing 7,000 New Jersey farmers, held its annual meeting and elected officers. H. B. Hancock of Cumberland County was elected president; D. J. Perrine of Middlesex County, vice-president; Dr. Frank App was made treasurer, and Miss Claire Garretson was elected assistant treasurer. Three trustees were elected to succeed themselves. These were Mr. Edward E. Logan of Burlington County, Dr. W. H. Whiton of Somerset County, and Mr. Joseph Barton of Burlington County. Dr. Whiton is a very active chairman of the Federation's legislative committee and Mr. Barton is also the president of the Jersey Fruit Growers' Cooperative Association.

Farm Legislation the Federation Supports

Dr. Whiton gave a report on important legislation affecting farmers which would be asked for in the present session of the New Jersey legislature. These included a revision of the Trespass Law to give more relief to farmers, and a statute to give dogs more freedom on owner's property. There is also a bill to increase the penalty for owners of roving bulls and another bill to get an appropriation to give farmers indemnity caused by damage from deer; the failure to get any relief from the deer nuisance is an especial aggravation to New Jersey farmers. Another bill which will be asked for is one to protect the farmers against fraud by nurserymen.

New Jersey farmers are also interested in the rural school problem. Mr. Ralph Decker of Sussex is the active chairman of the Federation's rural school committee, which will make a study of the rural schools. This will be used as the basis for future improvement.

In the evening of Tuesday, the Federated Boards held a very enjoyable banquet at Hildebrecht's Restaurant at Trenton.

Agricultural Week is a big annual event among New Jersey farmers. On Wednesday, Thursday and Friday there were meetings of practically every farmer organization, which listened to speakers of State and National reputation. A further report of the important business transacted by these meetings will be given next week.

Eastern Pennsylvania Notes

OLIVER D. SHOCK

Corn that contains excessive moisture and of immature growth, in a moldy condition and often half-frozen, is causing heavy losses in eastern Pennsylvania. Many farmers do not feed their corn to the farm animals, but use it for seed purposes. The selection of seed corn will require early and serious consideration on the part

of even the best farmers.

Pennsylvania canners met with a large number of canners at York recently and elected the following officers: J. G. Summers, president; H. M. Ruff, vice-president; J. M. Flinchbach, secretary and treasurer; Board of Directors, J. T. Smith, E. G. Ruff, William Wheeler.

The quarantine on poultry which was recently declared caused a heavy slump in the poultry market, was far reaching in its effects.

Eastern Pennsylvania has experienced the heaviest snowfall in a score of years. All roads in some sections were entirely impassable. City and county funerals had to be postponed in scores of incidents until the roads were made passable by snow plows and tractors.

Nineteen directors were elected at the meeting of the Agricultural and Horticultural Association of Berks County. The officers elected are as follows: President Abner S. Deysher; first vice-president, Jacob H. Riechert; second vice-president, J. William Kline; secretary, Charles W. Swoyer; assistant secretary, William M. Hartenstine; treasurer, Theodore M. Keppelman.

Members of the finance committee are: George S. Brumbach, Raymond Sharp, Theo. M. Keppelman, H. J. Schad, Romanus Esterly; auditing committee, J. Morgan Weidner, D. H. Hoch and George L. Roller.

Central Pennsylvania Notes

J. N. GLOVER

Elections are in order for the year 1925 of banks and farm organizations. The elections of the farm Extension Service on December 30th resulted in having the former officers re-elected.

At the election for the fair association, changes were made in the president and in the Board of Directors, so as to keep more farmers on the board.

Since wheat reached \$1.75 some farmers are holding for \$2 which they may get before another harvest. Wheat went into winter with a poor stand, but the 8 inches of snow covering the fields will be a protection to wheat, if the snow does not melt.

A few farmers are offering ear corn for sale, and the Mifflinburg Farmers' Exchange is in position to handle corn in ear at their plant or in carload lots elsewhere in Union county.

On several large farms there is considerable corn standing on shocks which had not been husked before cold weather began. Many farmers have not hauled in all their corn fodder as usual, thinking it will keep better in the field than stored in the barn. The Union County Farmers club has ordered clover seed early, expecting it to sell much higher by spring.

Connecticut Dairymen Hold Annual Meeting

DAVID STONE KELSEY

THE forty-fourth annual meeting of the Connecticut Dairymen's Association at Hartford, January 6-7th carried one very marked feature. There was stamped across the face of the official program, in magenta-red, the likeness of a clock-dial, the hands pointing to 8:45. Within the circle of hour-figures the upper part of the clock-face carried these mighty significant words: STANDARD TIME FOREVER.

Across the lower half were the words TIME TO START FOR SCHOOL.

Below this dial, acting as a sort of "caption" to the above, were these words:

The Connecticut Supreme Court Says that this clock is right

In some other, more exactly dairy features, the meeting was hardly up to

standard, even while there was offered a very excellent program. The entries for the exhibition of butter, milk, cream and the various classes of corn were so meager as to make the display appear actually weak. As the prizes offered were generous, the observer must conclude that Nutmeg State dairymen are so prosperous they do not need the further endorsement of these awards upon which to build more and better business.

Tending More Toward Dent Corn

In the corn display, the increase in the relative display of white-tipped yellow dents was most interesting. Some fifteen years ago samples of this Dent variety, Connecticut-grown, were sent to the State Experiment Station for a statement of protein content, and proved to be the highest corn known, making it nearer an ideal feed for sheep-feeding, and for the horse-team.

While the old-line yellow flints are still most in evidence, the dents are gaining each year.

The most enlightening feature of the meetings were the constant references to the state-wide success of cooperation in Connecticut since "the life-and-death struggle" of two years ago, with a plentiful sprinkling of raps at the still existing "Non-cooperatives," deriving benefits from the organization without themselves lifting on the load.

Aside from the really splendid programs of the two-days' meet that included B. F. Sheridan of Wisconsin; Charles W. Turner, University of Missouri; W. J. Frazier, University of Illinois; Prof. E. N. Boland of Boston, and A. W. Blair of the New Jersey Experiment Station, Connecticut specializes in her successful "Get-together" banquets, and this year proved no exception.

WITTE LOG & Saw

Cuts down trees and saws them up FAST—one man does the work of 10—saws 10 to 25 cords a day. Makes time. A one-man outfit. Easy to run and trouble-proof. Thousands in use. Powerful engine runs all other farm machinery. Uses Kerosene, Gasoline, Distillate or Gas.

Easy Payments down and take a year for balance of low price. Make your own terms. FREE full details, pictures and low prices. No obligation by writing. WITTE ENGINE WORKS 6801 Witte Building, Kansas City, Mo. 6801 Empire Building, Pittsburgh, Pa.

Planning the Farm Shop

And a List of a Few Simple Tools to Equip It.

IF THE farm buildings are arranged so that the implement shed is easily accessible from a central yard or court it is a desirable arrangement to use one end of the shed as the Farm Shop. The drawing shown herewith is a suggested shop arrangement.

By L. M. ROEHL

If one has a key and lock to the main

door it is not necessary or desirable to keep the tools in an extra cabinet. They can be kept in as good condition and as handy in the place indicated.

E, shows the location of a cabinet for keeping a supply of nails, screws, bolts, rivets, washers, nuts, etc. It is very desirable to have this cabinet divided into compartments so that each kind of thing has a place and then tack a label on each place. This minimizes annoyance in looking for what is wanted in a hurry.

F, is a suggested location for the forge. The space between the forge and wall is suitable for placing pieces of iron.

G, shows or suggests a location for the farm anvil. A piece of railroad rail on a block may be the most desirable for the work required. It is best to have it loose on the floor so that it may be set wherever it is desired to use it.

H, indicates the location of a slack tub. A wooden or metal pail is satisfactory.

I, represents the location of a grinder. This also is a portable grinder and may be placed on the floor wherever it is handiest to work on a sickle, axe or other tool.

The letter J indicates space on the wall for placing the farm tools such as rakes, hoes, shovels, crowbars, chains, rope, clevises, post maul, post hole digger, etc.

K, shows a location for a harness repair case in which are to be kept the tools necessary for such work and such harness repair parts as farmers find it desirable to keep in stock.

On brackets built on the wall at the letter L it is desirable to keep a supply of lumber. The amount and kind depending on the needs of the farm.

Letter M represents a suggested location for the stove.

Should the mechanical work on the farm be sufficient to warrant the purchase of a drill press it should be located at the rear of the shop between the two windows as indicated by the letter N.

The number and variety of construction and repair tools with which to equip a Farm Shop depends on the size and kind of farm, hence the amount and variety of tools necessary and also the skill possessed by the farmer. The equipment needed on a fruit or poultry farm need not be as extensive as that of a dairy or general farm.

Following is a list of tools and supplies suggested to equip the shop shown in the drawing to do the construction and repair work arising on a general farm.

Carpentry Tools

- 1—16 oz. bell faced straight claw hammer
- 1—26 in. rip saw, 6 teeth per inch
- 1—24 in. cross cut hand saw, 8 teeth per inch
- 1—set of auger bits
- 1—expansion bit
- 1—brace, 10 in. sweep
- 1—3/8 in. screw driver bit
- 1—auger file
- 1—Rose countersink
- 1—jack plane, 14 in. long, 2 in. blade
- 1—10 in. draw knife
- 1—wood carpenter's level, 28 in.
- 1—2 ft., 4 fold, all metal bound rule
- 1—12 in. half round wood file
- 1—12 in. flat file
- 1—5 in. extra slim taper triangular file
- 1—6 in. slim taper triangular file
- 1—6 in. regular taper triangular file
- 1—pair pliers
- 1—wood chisels 1/4, 1/2, 1 in.
- 1—12 in. combination square
- 1—wooden mallet
- 1—hand saw set (pistol grip)
- 2—screw drivers, 4 in. and 8 in.
- 1—24 in. steel square
- 1—nail set
- 1—combination oilstone, medium and fine
- 1—putty knife
- 1—24 inch pinch bar
- 1—2 1/2 lb. hatchet, 3 1/2 in. blade
- 1—pair 8 in. dividers
- 1—marking gauge
- 1—glass cutter

(Continued on Page 91)

fill the drill

—HALF AS OFTEN—

There's twice as much plant food in International Multiple-Strength Fertilizer as there is in standard fertilizer.

"Twice the value in plant food—but not twice the price!" Think of the saving in handling, the saving in hauling and drilling! Each figure in the analysis indicates a unit of plant food. Thus an 8-16-8 Multiple-Strength contains twice as much plant food as a 4-8-4.

All International Fertilizers are made up well in advance of the shipping season. This insures thoroughly cured goods which drill easily.

Before You Buy an Engine

Let me tell you how thousands of farmers are saving time and money with the only engine designed and built for farm work—The Edwards Farm Engine. I want to tell you how it is different from any other engine—how this one engine will fill your silo or run your washing machine, or do practically every power job on your farm; how it is changed from a 1 1/2 H. P. all the way up to a 6 H. P.—how it saves fuel, starts without cranking, how it does not have to be fastened down, does not vibrate, is light and easy to move from one job to another, yet is rugged and durable—and how it has made good with farmers for eight years.

Read What Users Say

"Clarence Rutledge, of Ontario, says: 'Have given my Edwards four years' steady work and like it fine. Runs 28-in. saw, 8-in. grinder, ensilage cutter and does all chores. Have had ten other engines. The Edwards beats them all.'"

G. N. Jerd of Vermont says: "Would not buy any other engine at one-half the price." Others say: "Fills a long felt want for us farmers." "Years of hard service and not a cent for repairs." "A little giant for work;" "has anything beat I ever saw in the shape of an engine."

Don't buy an engine until you get the facts about this marvelous engine. There is no obligation. Write now.

BABY CHICKS

HILLPOT Quality

**STURDY
PURE BRED
HIGH-EGG-YIELD CHICKS**

Egg Layers---Profit Payers

No wonder our chicks live and thrive—and quickly get down to the business of producing eggs for your profit. The secret of their success lies in the vigorous, healthy stock from which we breed them. These parent birds, carefully culled for best egg works, live a natural farm-range life, insuring offspring that cannot fail to produce results.

They're now show birds but letters from thousands of pleased customers show that they can—and do—lay eggs, especially during winter months when prices are highest.

January Chicken Chatter

L. H. Hiscock Talks on Hen House Management.

CLOSELY allied with ventilation is the whole subject of sanitary care of the poultry house. Disease, which is often the result of poor sanitation, is many times the Waterloo of poultry enterprises. While our chickens are able to take care of themselves in the summer, yet the confinement of winter, the sudden changes of temperature, improper housing—these are elements which, even though not necessarily disastrous, may stifle egg production and cut into the profits of a good winter egg market.

It seems like a hardship on the birds to keep hens cooped up in a house for several months. Hence the necessity for giving them the best care possible. A good, deep floor litter is hardly a substitute for a large run outdoors, but, from the standpoint of exercise, it does keep biddy hustling. If she has to scratch for all her food, she will have a day's work cut out for her.

The Litter Is All-Important

Various things are available for floor litter, ranging all the way from dry leaves to various kinds of straw. A bedding of wheat straw six or eight inches deep is an ideal floor covering, wheat straw being the best, because it breaks up and does not tend to pack down, as do oat and barley straw. Another good litter often available on a farm is hay seed. For floors that tend to be damp, no litter is more valuable than this because of its high capacity for absorption.

The life of a litter depends a good deal upon its condition. When it gets dirty, damp, and soggy, it should be renewed. By shaking it up with a fork every three or four days its life can be lengthened. Failure to clean dropping boards or spaces under the roosts will do much to rapidly destroy the value of a clean floor. It is a serious mistake not to have dropping boards arranged beneath the perches, because manure falling on a floor tends to do two things: foul the litter itself, and a dirty litter means a correspondingly dirty supply of eggs to clean every day.

Handling Mash Hoppers and Water Fountains.

To keep the floor in shape there are two other conditions that are worth noticing. If you feed a wet mash or any kind of wet food, it does not take long to rig up a trough. It is a more cleanly way to feed the hens and it will save waste and souring on the floor. Also, if the hens do not clean up the feeding at the allotted time, it will give you a chance to remove it quickly and easily.

Water fountains are another cause for worry. First, they need to be anchored so that they cannot be spilled with their contents onto the floor. Secondly, they need some sort of a cover; hens seem to delight in the attempt to walk on water, and they certainly make poor ducks when they fall in. But the water a bird spills can work mischief with the quality of the straw. If the weather is warm, the straw in the vicinity of the drinking fountain will become saturated with moisture; if it is cold, you have a steady accumulation of ice ready to melt into or all over the floor the minute it thaws.

Look Out for Drafts

There is one other thing. In my article on ventilation I spoke of the need of fresh air. Yet, from the standpoint of health, nothing is worse for a hen than exposure to cold air drafts. In other words, wherever your hen is she needs protection. A crack in the floor, a crack in the wall where birds stand or feed, a crack or an opening in the wall where the roosts are placed, these are serious obstacles to a hen's health; they may give her colds or roup or pneu-

monia. Cold air is not unhealthy, but when it comes into a hen-house, bring it in where it will not strike or play upon the hens to their disadvantage and peril.

The labor involved in keeping up a flock of hens is not great. The return in increased egg profit will more than offset the labor. A hen responds to good care. Are you giving her all she ought to have for her comfort?—L. H. HISCOCK.

What Breed Shall We Raise?

I KNOW an Iowa farmer who has never made a success in raising poultry and is constantly switching from one breed to another in the vain hope that he may yet find the breed that will prove profitable for him. He does not appear to realize that the trouble lies with himself, and not with the breed. In this particular case, it is inadequate housing and improper feeding that is responsible for his failure to make poultry raising pay. No breed of poultry can surmount such obstacles and pay a profit.

That brings up the question: "Is there any one breed that is best for the farmer to raise?" The best poultry authorities claim there is no one best breed for the farm. Selection of breed is largely a matter of personal preference. Some farmers specialize on egg production, and therefore want one of the lighter breeds, but here again the question of color and type enters in, as well as color, size and type of egg. Many like white fowls, but the black, brown, buff

Service Department

Standard Carbide Stockholders to Meet

THE next meeting of the stockholders of the Farmers Standard Carbide is scheduled to take place in the Court House in Plattsburg, New York, at 10 A. M., Saturday, January 24, 1925. The attorney in Plattsburg who has been watching this matter for us, has received a letter from Hon. Victor F. Boire, Chairman of the new Board of Directors, and for the information of our readers we quote this letter:

"The report of the Engineers and experts who are now working on the Farmers Standard Carbide Plant, will be in about the middle of January and a meeting of the stockholders will be held January 24th, at Plattsburg. The best course to follow at present is to await the report of the investigators.

"We have succeeded, I believe, in keeping the creditors at bay until the time of the meeting.

"At the last meeting of the Board of Directors, Mr. Samuel Null resigned as President, and Mr. J. C. Edwards of New York City, who represents a large number of stockholders from Maryland, his old home, was elected President, and Mr. S. S. Allen of Plattsburg, was elected Vice-President.

"It is hoped at this meeting we will have enough proxies to authorize the company to do business, either attempt to reorganize or sell. It is quite important that this power be given the company or the property will probably be sold to satisfy the creditors or at a mortgage foreclosure, and it makes all the difference in the world the amount this property will bring, whether it is sold at a forced sale or not.

"On the other hand, if the property is not to be sold, the proxies are necessary to give the company the authority to do the necessary reorganizing.

"At present there are not enough proxies to authorize either course of action, and while the proxies are still coming in, they are coming in rather slowly and it is necessary that an effort be made to get the rest of the stockholders to send their proxies in."

Our attorney in Plattsburg also states that it is advisable that a quorum be either present or represented at this meeting. He says that the stockholders should, if possible, be present at the meeting, and, if not, they should send proxies, and then says:

"If they will advise in writing how they would like to vote in the matter, their wishes will be respected. It seems very necessary that a quorum be present at the next meeting of stockholders so that some final action may be taken. In case of a reorganization, the stockholders would be fully advised before any definite plan was adopted."

In view of these facts, we suggest that all stockholders who can possibly do so attend the meeting in Plattsburg on January 24th. If they cannot do so, we suggest that they send proxies to Allen & Allen in Plattsburg. While at this time it is impossible to say whether a successful reorganization can be put through, nevertheless we feel that it is advisable that a legal meeting be held and for this purpose proxies be sent. If any stockholders have any inquiries in regard to the situation, we would be pleased to have them write to us or Messrs. Allen & Allen.

Who Pays the Taxes?

"Will you kindly give me information about the following matter? I sold a bungalow on first of May, 1924, same being assessed to the other party. Who is liable to pay taxes which are due this month? Let me know in this week's American Agriculturist if possible."—M. B., Suffolk County, N. Y.

WE CANNOT answer your question directly, but we can tell you how to have it answered. When property is sold, the title deed always contains a covenant against encumbrances, i. e., the seller agrees that no liens exist against it. There is no

set rule as to when taxes become a lien. Sometimes the lien arises the moment of assessment; sometimes, not until the taxes are due and payable,—this latter being the more general rule. Hence, you must find out when the assessment was made and when it became a lien. If it became a lien before you sold to the present owner, you are responsible therefor. We suggest, therefore, that you inquire of your county treasurer as to when said tax became a lien.

What Does "Adverse Possession" Mean?

"Will you please give me the ownership of land where fence has been built by my father 60 years ago and maintained by me for over forty years? About two years ago, land adjoining me was sold. The present owner has had the line surveyed and the present survey falls about one rod on me (more or less) in State of New York with present laws. Can the said neighbor compel me to remove the present fence and build a new one on the last and present survey?"—C. E. G., Chautauqua County, N. Y.

IT IS our opinion that if the land in question has been held adversely by you or your father for more than 20 years, title thereto is in you by what is called "adverse possession". The facts given in your letter indicate that your title has become absolute by invocation of this doctrine. If your neighbor insists on removal of the fence, you should make him bring an action of ejectment, and in defense thereto your attorney will assert that title to the disputed property is in you.

How We Do Business

IN ORDER that you may understand that our guarantee back of our advertisers really means what it says, we would like to refer a moment to a very interesting case which has just been concluded against one of our advertisers by our Service Bureau. When advertisements are received by AMERICAN AGRICULTURIST, they are very carefully checked with the view to letting absolutely nothing in the paper which is not all right. We do this for two reasons: first, by our guarantee we refund to our readers anything lost to them through dealing with unreliable advertisers in our columns, and unless we are certain that these advertisers were fully reliable we would lose large sums of money in refunds; second, and most important of all, even if we did not lose a cent, we consider it the fundamental duty of a farm paper to stand by its readers and be worthy of their confidence.

In this connection, however, we believe it fair when answering advertisements to say in your letter, "I saw your advertisement in the old reliable AMERICAN AGRICULTURIST", for if it should come to a question of settlement, it would be unfair for you to ask us to settle for an advertisement which you saw in some other paper. If you use the above statement, it is proof positive when you ask for a settlement that the advertisement was seen in AMERICAN AGRICULTURIST.

However, it is of course impossible to handle a large amount of business involving hundreds of different firms without a rascal getting by us once in a while, and getting his advertisement into our columns. In such cases, there is but one thing for us to do, and that is to refund to our readers who lose through dealings with such dishonest firms as soon as we get the facts.

The Garden City Chickery, located at Camden, New Jersey, is apparently one advertiser with doubtful integrity who got by our original inspection and advertised in AMERICAN AGRICULTURIST last spring. We had two complaints against this firm, one from Mrs. Anna Nally, Amenia, New York, for \$18; and one from Mr. Lewis I. French, of Newport, New York, for \$49. When our Service Bureau took the matter

(Continued on Page 90)

The tools of national service

The American people lead the world in the efficiency of industry. Who can say what part of their success is due to the superior implements they use. This much we know. They have the world's best telephone system for their communication, and they use it without parallel among the races of the earth. To this end telephone service must be equipped with proper tools.

The tools of management. Bell System executives, rising from the ranks of those who know telephony, must share our responsibility to the public, most of whom are telephone users, shareholders or workers.

The tools of service. The national, two-billion-dollar Bell System, handling fifty-eight million telephone calls a day, must be enlarged and extended while in use.

The tools of forecast. We must continue to know the rapid and complex growth of communities and make provision in advance, so that the telephone will be ready when needed.

The tools of supply. The Western Electric Company, our manufacturing and purchasing department, its factories manned by 40,000 workers, assures us that extension of facilities need never be interrupted.

We must have the best tools of finance, of invention, of everything else, in order to continue serving the American people.

The Trouble Maker—By E. R. Eastman

ALL the time the sheriff was talking the lawyer seem to be growing taller and taller. He swung a long arm with outstretched forefinger so suddenly over his head and down toward the other man's face that the little sheriff involuntarily stepped backwards.

"Bailed out! Bailed out!" he shouted. "Don't talk to me about getting him out of here! I've been up trying to argue with that old jackass of a judge to fix the bail tonight so we could take the boy home, and he wouldn't do it. By godfrey, I'll show him he's run things as long as he is going to in this county!"

"He'd have been hung long ago in the county I came from," said the sheriff.

The smile came back to the lawyer's face.

"Let the farmers come," he said. I'm sorry for you, Dave, but it's about time some folks woke up to the fact that farmers count for something in this county!"

"Someone is about due to wake up, all right," agreed the sheriff grimly. "The trouble is, in this waking up business by a mob, the wrong person gets the waking."

"Won't be any mob," said Winslow. "Farmers have too much common sense to do anything rash, no matter how mad they get. But all the same," he predicted, "some folks not far away are due for a surprise, if I don't miss my guess. I'll bet five big golden doubloons, whatever they are, that young Taylor sleeps in his own bed tonight!"

"And I'll bet five golden doubloons," said the sheriff, "that if I ever get through with this job, I'm goin' back to the wild West, where I came from, where a man can get a little peace and quiet!"

FROM the jail, Winslow went directly to the farm bureau office. Although it was supper time, Bradley was still at his desk.

"Dave Messenger tells me a lot of farmers are coming here tonight on account of this Taylor matter. Is that true?"

"Right," said Bradley, "and they mean business, too, if I'm to believe what they tell me over the telephone."

"Well, that's what I'm here for, Bradley. We—that is, you and I—have to handle a ticklish situation."

"Leave me out," said the county agent, irritably, "I'm already so deep in this mess that I'll lose my job when it's over, if it ever is."

"You'll lose it anyway," promised Winslow, shaking a long finger emphatically at him, "if you don't help handle this crowd tonight."

"What do you want me to do?" Bradley asked sulkily.

"Get some farmers that you can rely on, and have them pass the word along the streets tonight for everyone to come to the hall at eight o'clock. Tell them there's where the fireworks will be. If we can get them inside where we can talk to them and keep them quiet, we can hold them. You give them reports on the strike for a while, then lead up to this Taylor matter and call on me as Jim's lawyer."

"What are you going to do?"

"Well, I'm not saying just what, if you don't mind. Only I might tell you this, that old Judge Rising has bossed this county and used the people for a football about as long as he is going to!"

"What's that got to do with the milk strike? We don't want to get any politics mixed up in this."

"That's all right, boy. Politics is one of the things that ails the milk business as well as other business. If you will just follow my lead tonight, you'll see

a little politics washed out of the milk business, and incidentally, we'll get young Taylor out of hook—kill two birds with one stone, as it were."

LATE in the afternoon the farmers began to come. Like the following of the pied piper, they were of all kinds; tall farmers, short farmers, lean farmers, fat farmers; farmers with grey hair and seamed faces of the years, and farmers on whom the hand of time had not yet rested heavily; farmers with cars, more with horse rigs; farmers on foot, and even some of the younger ones on horseback. For hours they had been drifting in, gathering and talking in undertones in small groups all over town.

The sheriff saw them and scowled; lawyer Winslow saw them and smiled. One saw in them trouble, the other opportunity. Thus is it often that "one man's meat is another man's poison."

What Has Happened So Far

Once the milk strike is started, sleepy old Speedtown begins to be worthy of its name. Jim Taylor, leader of the striking forces, has warned against violent measures, but a group of hot-headed young farmers hold up old Johnny Ball, leader of the opposition, and dump his milk in the ditch. Ball and his hired man, Bill Mead, both swear that Jim was leader of the group of masked men, and much against his will, Dave Messenger, the peace-loving sheriff arrests his young friend. John Winslow, a Yankee lawyer, undertakes to defend Jim's case, but is unable to induce a prejudiced judge to admit him to bail.

Aroused by the unjust arrest, farmers from all over the county hasten to town to protest. Messenger is warned they are coming.

But when Lawyer Winslow made his plans, he reckoned without young Greene, for he and his followers were also among those present. As Greene was hurrying up Water Street shortly after dark, one of his allies of the morning over took him.

"Hey, Greene, goin' to the meeting?"

"What meetin'?"

"They're passin' word to meet in the big hall at eight o'clock tonight."

"More pussy-footin'," said Greene. "Let them pass all the fool words they want to! We're here for somethin' besides meetings. Too much talk. Too many meetings. Time for action. We'll hold a gathering of our own."

The two men whispered together for a few moments and then Greene's lieutenant hurried away. A half hour later more than a hundred excited men faced Greene back of the Congregational church on Whig street.

"You men know what you're in town tonight for," he told them. "Jim Taylor's in jail because he's our leader, and because some scab milk was spilled this mornin'. Every minute that he stays in that jail is an added insult to every farmer in this county."

"That's right," shouted half a dozen men, "and we're here to get him out!"

"Sure we are," said Greene. "But we can't do it by holding a Ladies' Aid meetin' up to the town hall. They've been passing the word along ever since dark for all of us to come up there at eight o'clock. The whole idea is to keep us from doin' something."

"We'll show 'em!" growled a man, standing near the front of the group. "We'll hold a meetin' but it'll be at the jail, not at the hall."

"All right," said Greene. "Thought you'd feel that way. It's now a little after seven o'clock. There's been talk enough. It's time for action. Follow me, and we'll show 'em who's boss around here!"

"Let's go!" they shouted, and turned as one man and went out by the church, down the street; a hundred men, and then as group after group joined in,

two hundred; and finally four or five hundred formed a silent, hurrying ominous mob.

CHAPTER XVII

DAVE Messenger sat gloomily smoking a cigar in his little office in the residence part of the jail. It had been a bad day, if he knew the signs, the worst was yet to come.

Casually looking at the mild little man slumped down in his chair in the lamp-light, or listening to his soft spoken drawl, one probably would have refused to believe the stories of another chapter in his life which, on fairly good authority, had been told about him.

Some years before, so the story went, Dave had been a rancher who by hard work, with some little good fortune thrown in, had succeeded in getting a few thousand dollars ahead. A group of swindlers posing as tourists had won his confidence and taken away almost all

a lot of honest citizens wouldn't be roasting around here tonight. Talk about the wild West! If this milk fight lasts another week, the West will be a Sunday school picnic in comparison. Gettin' old, I guess—used to like a fuss—"

Some one was shouting outside.

"Well, there they are," said Dave stoically. Then he took his feet off of his desk, arose, stretched himself, put on his coat, and strolled out on the little stoop on the jail side of the building.

The street was packed with men. Most of them were trying to talk at the same time. Dave stood for a moment quietly looking at them before they saw him. When they did, they became silent.

"Evenin', boys," the sheriff said in his pleasant drawl. "What can I do for you? If it's lodgin's you want, I'm sorry, but I haven't accommodations enough to go round."

Dan Greene stepped forward.

"You know what we want, Messenger," he growled, "and we hope you're goin' to be sensible and avoid trouble."

"Never went around the corner to avoid it, when it was necessary trouble," said the sheriff. He did not raise his voice, and his low-spoken drawl was a little more pronounced than usual; but it carried up and down the street to every man.

Greene started to argue.

"We warn you not to make any resistance. This crowd means business."

"That's right," said a man standing near Greene. "We mean business, Messenger, and the sooner you realize it, the better it will be for you."

"I don't doubt it for a moment," said the sheriff, "but, boys, don't make any mistakes. I mean business, too."

"Aw, shut up the fool talkin' and get out of the way," shouted a farmer.

"Not jest yet," said Dave firmly. "This county is supposed to be civilized, governed by law and order, and a couple of years ago when you fellers elected me, I swore to uphold the law." He paused briefly and then added, "I expect to do it."

"Don't talk to us about elections," said Greene, and then added quietly "we don't have a word to say about who's elected, and you know it. The politicians attend to that."

A GIANT of a man, without a hat, but with a great shock of hair, crowded his fellows aside and stepped up beside Greene.

"Too much gab!" he growled. "Get out of the way, we tell you, before you get hurt!"

The crowd began to mill and push and those in front, moved by the pressure from behind, started to close in. It was all that was needed. Instantly there was pandemonium. Talk changed to shouts, and the shouts to an incoherent roar. Voices shriller or louder than the others rose above the general noise.

"Down with him!"

"Away with him!"

"To H— with him!"

"Taylor!"

"Give us Taylor!"

Others took up this last cry, until they were all shouting Taylor's name in unison.

The little sheriff stood leaning forward without moving a muscle, watched them surge toward him.

One second they saw him with arms hanging carelessly at his side; the next instant, he held a "forty-five" in each hand. So quickly was it done that they hardly saw him move.

"Halt!" he said.

The sheriff smiled, but the men in the

A Sunday Afternoon Visit with the A. A. Philosophy Man.

S AID Socrates to another Greek, "Let me teach you how to remember."

"Teach me rather to forget, if you would make me happy," replied his friend.

Some mental teachers say that nothing is ever forgotten. I know better. At least, I know that time takes the sting out of painful experiences. I went to

REV. J. W. HOLLAND

bed a few times as a child crying because of some spanking which I doubtless deserved. I can smile over those spankings now.

There was that dirty insult aimed at you. Forget it. The only way you can fight a skunk is to get down on his level, and when the battle is over, you will not be fit

to go home to your family.

You and I had just as well forget the dishonesties that crop out in the daily grind of life. The liar is deficient in mental as well as in moral fiber.

If some merchant does you in a trade, don't rail about it for a month. Keep your eyes open a little wider, and go somewhere else to trade.

Forget the sins that weak people commit. There are a few of them in every vicinity. They may really try harder to be decent than we think. If it is at all

By REV. J. W. HOLLAND

possible for you, try to believe better of them.

Scandal mongering is the mental occupation next below nothing. For every four people who kick up their heels in immoral ways, there are ninety-six who do not. Talk about the good deeds of the good people, and forget the didos of the degenerate and foolish.

Forget about the hardships of the past. Too oft related they get as big as some of the war stories the old soldiers used to tell. If any class of people ever had it hard, that class is the farmer folks in the past four or five years. Yet, even as I write this prices are mounting up to levels that will spell again material comfort, and ability to meet pressing obligations.

The bitterness will soon be forgotten, and the power to meet a difficult situation will remain in our souls.

Bill Arp, the noted Southern humorist tells of one Georgia soldier who went home at the close of the Civil War, asked what he was going to do, he replied, "I am going to forget the war, plant a crop, and if the Yankees come down here, I'll lick 'em again."

Those times when we acted worse than we knew we ought. Forget them. Remorse is a great old grave opener, but things can be buried so deep that even her slimy claws cannot dig them up.

If you and I were back at that par-

ticular spot again, we might repeat the conduct that we now regret, but having learned better, let's forget our weakness, and trust in our better-selves for the future.

An ounce of "get" is worth a ton of regret.

A forward look is better than casting the glance backward.

To remember the thousand and one kindnesses is better than to hug to our hearts the memory of one bitter thing.

Forget it!

How To Adjust Auto Headlights

HERE are five rules for the adjustment of automobile headlights, given by Alfred W. Devine, Headlight Inspector of the State Motor Vehicle Bureau:

1. Place care on a level surface so that the headlights are twenty-five feet from a wall or screen.

2. Examine the bulbs and reflectors and see that they are clean and that the bulbs are of twenty-one candle power, no more or less.

3. See that the lenses are installed right side up so they cannot be twisted.

4. Cover one light at a time and focus the other by turning the focusing screw which projects through the back of the lamp case. When properly focussed, the beam of light on the wall or screen will be concentrated into a narrow band.

5. Tip or bend each lamp until the top of the beam on the wall is no higher than the center of the lamp, with the car fully loaded.

When this procedure has been carefully followed, the headlights are properly adjusted.

Is your cow stable of the self-ventilated type? Cows enjoy fresh air, but too much of it means cold drafts in the winter; fall is the time to make plans for a warm barn.

A warm cow may not always be contented, but a contented cow is always warm.

Laughter lightens the load.

Growing Asters for Profit

Turning a Hobby Into a Money-Making Occupation

MY MOTHER and I have found aster-growing a profitable, and enjoyable business. There are a few points, however, which anyone who contemplates entering it should carefully study.

First, there is the question of the hot-house. I would not advise a beginner to build a large one; first, because of the expense of construction; second, it requires experience to manage a large hot house successfully. Location is a very important point to consider, especially if one lives in a section where high winds are frequent, as a great deal of damage is sometimes caused by the glass blowing in. Do not let the wind breaks interfere with the sun entering the house from the South, or West, as plants of any kind must have sunshine. Double thick glass is much warmer, and amply repays for the extra expense at the time of construction.

An expensive heating plant is not a ne-

Asters should be transplanted when the second or third true leaf has developed. Deep boxes, about three inches, should be used for this work, as they give the root system a sufficient chance to develop before planting out. The same soil composition may be used for transplanting as was used when sowing the seed. Continue the watering as formerly; except, that more water is required as the plants develop larger root systems.

From ten days to two weeks before planting out, remove the boxes to the field, where the plants may harden before setting them in the ground. Thorough preparation of the soil is essential to success. Make the rows 18 inches apart so that the horse cultivator may be used.

When the plants have sufficiently hardened to permit of the change, dig a shallow trench, and drop them carefully, following this by about one pint of water to

who make growing asters for profit a business will derive pleasure as well as profit from the undertaking.—Eva Wallenbeck.

Cold Desserts for a Change

DON'T stop serving cool desserts just because the very hot weather is over. Sherbets and ice creams are popular all year 'round and here are a few variations that are easy to make, after the fresh fruit season is past:

Pineapple Sherbet.—Soak 1 tablespoon gelatin in 1 cup cold water 15 minutes, add 1 cup hot water, 1 pint grated or canned pineapple, 1½ cups sugar and the juice of 1 lemon or 1 orange. Freeze.

Pineapple Sponge.—To 1 quart of pineapple, juice and all, add 1 cup sugar and cook ten minutes. Add ½ package gelatin dissolved in ½ cup water. When nearly cool and partly set add whites of 2 eggs beaten stiff. Mix lightly and pour into mold or individual cups.

Cherry Sherbet.—Boil 1 quart water with 1 lb. sugar for 15 minutes. Add 1 quart sour cherries and let cool. Add juice of 1 orange, freeze, and serve in sherbet glasses.

Fruit Mousse.—Soak ¼ box gelatin in ¼ cup cold water 20 minutes, add ¾ cup boiling water, and when dissolved add 1 cup orange juice, 1 cup pineapple juice, and sugar to taste. Set in a pan of ice and stir till the mixture begins to thicken. Beat in 1 pint sweetened whipped cream and freeze to a soft mush.

Fruit Snow.—To 1 quart of any desired fruit, add ½ box gelatin dissolved in 1 pint cold water. Let come to a boil, add juice of 2 lemons and 2 cups sugar. Stir well. Set in cold place and when it thickens a little whip in the stiffly beaten whites of 2 eggs. Beat 10 or 15 minutes, pour into individual molds or fancy serving dishes and serve with whipped cream. Fresh fruit is ideal, but any canned fruit does very nicely.—Mrs. E. M. Anderson.

The Trouble Maker

(Continued from Page 86)

mob knew that they looked old man Death squarely in the face. An instant only they hesitated, and then they stopped.

"There's a meetin' up in the town hall about this Taylor business," drawled Messenger. "Street's a poor place for a meetin' anyhow. You've got just 'bout time to make it. Better go."

The glaring street light showed the smile still on Dave's face, but those in the front row, so near that they could almost touch him, saw that there was no smile in the man's eyes. They stood looking at him uncertainly, and as they looked, a feeling as if a cold wind had blown upon them passed down their spines. A moment longer they hesitated, shuffled, and then as if by common impulse, they broke away in groups and started down the street for the town hall.

(To be Continued)

Hints for Housekeepers

IF THE mahogany furniture has scratches on it use a fine soft brush and apply iodine. They will hardly be noticeable.

The richer the doughnut mixture the more fat it will absorb in frying. When made entirely without fat, the crullers are tough, but when one is too generous with it they are unwholesome and unpalatable. When the happy medium is hit they are delicious. One tablespoonful is sufficient for a recipe calling for one cupful of milk and one cupful of sugar.—Mrs. George Gray.

Utility Clothes for the Busy Woman

No. 1863, a one piece apron, slips over the head and buttons at the side. It comes in one size only and takes 2½ yards of 27 inch material, with 9 yards binding. Price 12c.

No. 1862—bloomer pattern in 2 lengths. Sizes 16 years, 28, 32 and 36 inch waist measure. Size 28 requires 2¼ yards material. Pattern, 12c.

No. 2292 is the latest idea in underclothing. It solves the problem of the dress which needs a vestee to complete the effect and makes it easy to launder the extra front when the dress itself does not need cleaning. The small picture shows how it is worn with a frock. The pattern is so perforated that the combination can be made without the vestee front. Sizes 16 years, 36, 38, 40, 42 and 44 inches bust measure. Size 36 takes 2¾ yards 36 inch material. Pattern 12c.

TO ORDER: write name and address, pattern numbers and sizes very clearly, enclose right amount in stamps (coins sent at your own risk) and mail to Pattern Dept., AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York City. Always keep a record of your order.

cessity to a beginner with a small house. When we first began we used a small coal stove, and found it did very good work.

In the fall, bring in a quantity of soil from the garden; mix this with well rotted droppings from the cow stanchion, using a ratio of 2/3 soil to 1/3 manure. Stir this mixture frequently, to prevent weeds from starting. If it is possible, keep the dirt in the green house, where the sun will thoroughly dry it, before planting time comes.

Start Seedlings Right

About the tenth of March, we sowed our seed for early flowering plants. Have the soil dry and warm before sowing the seed; as this is a great aid to rapid germination. Be careful not to sow the seed too thick, as it is almost certain to result in weak, spindling plants. After you have finished sowing, cover the seed with a light sprinkling of very fine dirt; and place a damp cloth over the boxes. Keep them warm, dark and moist until there are signs of germination, then remove the cloth, placing the boxes in the sunlight.

Now that the seedlings have started, the temperature in the hot house should be watched carefully. At no time during the indoor growth of aster plants, should the mercury drop below 65°. To obtain the best results, there should be plenty of moisture. I would advise spraying with a small hose, and as light a stream as possible; heavy water pressure is liable to break the plants.

each plant. Pack the soil well around the roots as this does much towards holding the moisture.

Cultivating It Very Important

Now that we have completed the task of planting, the most essential thing we have to do and probably the hardest, is cultivating. Too much cannot be said on this subject, for it is absolutely necessary that this be done well, else all previous labor will amount to naught. The best results can be secured by cultivating as soon after a shower as the ground can be worked without making it lumpy. Cover the ground with straw, or lawn clippings when cultivation has been discontinued; this holds the moisture and protects the blossoms from becoming soiled by lying on the ground.

Large, perfect blossoms, such as one wants for commercial purposes are produced by disbudding. Pick off all except six or seven of the largest buds while they are still green, thus giving the few remaining buds all the strength of the plants. The aster beetle is the greatest trial of the grower. They will be found first in the heart of the blossom, many times before the bud is fully open. We have never found any satisfactory spray by which beetles could be exterminated without damaging the blossoms. The only sure method is the slow one of picking them off.

When the blossoms have sufficiently developed to be shipped, then comes the harvest, the reward of our labors. Those

Suggestions for Work and Play Hours

Good New Movies, Kitchen Hints and an Embroidery Design

ISN'T Life Wonderful? the new D. W. Griffith picture, is not only entirely different from anything this producer of unusual films has done before but is decidedly unique among all the season's feature films. To say that it concerns the trials and difficulties of a Polish refugee family in Germany after the end of the war may make it seem far away from every day American life, but the emotions and portraits are universal ones and no one could see it without completely entering into the joys and sorrows of the brave little group.

Never did a potato seem so important! For months the family must subsist on turnips, while Hans cultivates his tiny patch to bring life itself to those he loves. When he and Inga, beautifully played by Carol Dempster, secretly cook the first potatoes and substitute them for the hated turnips, the excitement of the dinner that follows is reflected from the screen to the audience. And when the pet hen, left by a neighbor in their care, lays an egg in her nest in the cellar, it really seems more than one can bear. Anything equalling the intensity and emotion of that dinner scene has not reached the screen in many a long day.

A Beautiful Love Story

How Hans and Inga in the midst of their battle to keep the family clothed and fed, try to save for their own long-deferred wedding is a beautifully told story. Everything hangs on the potato patch and the harvest it brings.

The cast is not a large one but is extremely well chosen. The old grandmother curtly forbidding the match but secretly making her own wedding dress over for Inga is excellently played, as is the absent minded professor father, the student son who turns waiter and the pert little janitor who in better days had been a dancer and amuses himself executing fancy steps with his broom as partner.

We advise you to take the whole family to see "Isn't Life Wonderful?" when it comes to your local moving picture theatre.

Films Worth Seeing

HERE are more selected motion pictures. **J** (juvenile) before a title indicates that while suitable for the family audience, a film is especially appropriate for boys and girls of grammar school age. Other films are for the general audience, composed mainly of adults.

BLACK LIGHTNING—"Thunder," a fine German police dog, and his master, tramping the roads for his health, become involved in a mountain feud, out of which springs a romance. (Gotham)

THE BORDER LEGION—A thrilling Western built around a notorious bad man with a streak of good which is revealed by his contact with a brave and beautiful girl whom he vainly loves. Highly dramatic situations and fine scenery. From the novel by Zane Grey. (Paramount)

BROKEN LAWS—This picture with a purpose, produced by Mrs. Wallace Reid, shows the insidious effect upon a little boy of his father's disregard for law. Can a guilty parent assume the punishment laid upon the grown child when the latter has committed wrong?

THE CITY THAT NEVER SLEEPS—To guard her daughter from the dangerous influence of her calling, a saloon keeper's widow gives her into the keeping of a society woman. The dramatic height of the film comes when this girl, with a group of wild companions, enters her mother's cabaret, and the mother is faced with the problem of opening the girl's eyes and winning her back. From the story, "Mother Day," by Leroy Scott. (Paramount)

THE GAIETY GIRL—An old man and his daughter, descendants of the Tudors, are dispossessed from their ancestral manor, and the girl joins a musical show. Then to save her dying father she submits to marriage with the upstart purchaser of their property, out of which arises a tense and thrilling situation when the unhappy bride returns to her former home. (Universal)

THE MIDNIGHT EXPRESS—A good story with excellent railroad atmosphere, about the son of a railroad president who determines to make his way from the bot-

tom up and in so doing shows both ability and heroism. (C. B. C.)

THE ONLY WOMAN is worth seeing for the fact that Norma Talmadge plays the lead. Otherwise it is a rather trite and only fairly interesting story of a woman who reforms a drunkard whom her father forces her to marry. Good scenes of a shipwreck. (First National)

THE HOUSE OF YOUTH—A flapper picture introducing a few wild scenes in the beginning but devoted mainly to showing the woe which follows—till the flapper has paid for her wild existence. (Producers Distributing)

INTO THE NET—A detective story in ten episodes written by Police Commissioner Enright of New York, showing in thrilling fashion how the police solve crimes. (Pathe)

MARRIED FLIRTS—Pauline Frederick as the wife who is too absorbed in her literary labors to mind her personal appearance, determines, when she has lost her husband, both to win him back and teach a lesson to the woman who lured him away. This she does in superb fashion, to the intense satisfaction of the audience. Convincing and unusually well acted by whole cast. From novel, "Mrs. Paramor," by Louis Joseph Vance. (Metro-Goldwyn)

THE MINE WITH THE IRON DOOR—Picturesque settings, romance, adventure and action abound in this film from the novel by Harold Bell Wright. (Principal Pictures)

THE SEA HAWK—The glorious swash-buckling romance of an English gentleman, forced by the Spaniards to labor as galley slave, who turns Moorish freebooter and punishes his enemies. Eye-filling scenes and an enthralling story with Milton Sills and Enid Bennett. From the novel by Rafael Sabatini. (First National)

J THUNDERING HOOPS—A beautiful horse co-stars in this with Fred Thomson. A realistic bull-fight in Mexico is one of the incidents. (F. B. O.)

THE TURMOIL—A study of the characters of a get-rich-quick man, his daughter, a flapper, and his three sons. From the novel by Booth Tarkington. (Universal)

Frying in Deep Fat

WHEN frying fried cakes, doughnuts or fritters in deep fat and to keep the fat from scorching, or making the articles too brown, have a large potato pared, and slice one, two or three thin slices into the kettle of fat, according to the heat. They will make the fat boil up and thus fry more evenly. Watch and turn them frequently to have all sides browned alike.

Remove the potato chips as soon as they are done and put upon a dish and slice a piece or two more into the kettle. And by the time all the cakes, or fritters are done, you will have a nice dish of Saratoga chips and the cakes will be all the better for the addition of the potatoes. And what is better than all the rest, the fat left over will be as clear and white and tasteless as any fresh new unused lard and can be used for anything wanted.—CLARICE RAYMOND.

Glorified Custard

ONE of the hardest tasks confronting the housewife who is restricted by a small allowance in the making up of her menus, is to provide variety. "There is nothing under the sun" but sometimes the old things can be disguised sufficiently to appear new and have a different taste.

For instance there is the easily made custard, consisting of two cupsful of milk, three eggs, ½ cupful sugar, a pinch of salt and flavoring. Nothing is healthier or more quickly prepared, but the average family does not wish custard to be trotted out too often; however, if one adds half a cupful of cocoanut, covering the custard with a meringue, over which is sprinkled more cocoanut, the dish takes on quite a holiday air. Or caramelize the sugar before adding it to the other ingredients, and serve with a caramel sauce, and you have another delectable dessert.

The addition of buttered bread (buttered side up) just before the custard is popped into the oven, sprinkled with sugar and cinnamon, insures a satisfactory top-off to luncheon or supper. If your family likes honey, try using that instead of sugar once in

a while, and serve the custard in tall glasses with a spoonful of whipped cream. Nearly all of the fresh fruits, as well as the dried ones, also nuts, dates figs and raisins can be used with success,—a layer of preserves covered with meringue, raising the humble custard to the dignity of a "company desert."

Mrs. E. B. DuBridge.

A Three Piece Buffet Set

NOW is the time to start embroidered sets, either to replenish your own stock of linens or to have a good supply ready for gift seasons and spring brides.

No. E323-1, a buffet set of three pieces, as illustrated, comes stamped on

cream linen. The embroidery is worked in pink and blue French knots, making the flowers. Green darning stitch supplies the stem.

The set on the linen is 50c. If you want floss to work it, add 25c to your order.

White Pudding

MY mother made "white pudding" from fresh suet, which was well liked when served very hot. Shred any amount of suet, removing all tough and stringy pieces. Put suet through grinder, using medium knife. Add two parts flour to one of suet. Season with pepper and salt to taste. Fill small bag made of muslin, leaving plenty of room to swell in cooking, boil in pan one hour or more, having pudding well covered with water. Serve on a hot platter, after removing the bag. At butchering time mother would sometimes clean casings, fill with air and dry, then fill in pudding with funnel. These were very nice, but a very tedious task. If kept in a dry place this pudding will keep a long time before becoming strong.—A. S.

What Does a Farm Boy Think About?

(Continued from Page 69)

Previously I have mentioned the "life with the idea. Jim cut the hole and interest" trait that is so characteristic of boys and girls in their 'teen ages. A second and common characteristic of these young folks I shall call SELF ASSERTION. They are less likely than formerly to accept the ideas of others. And thereby hangs many a heartache and misunderstanding. He is accused of being bull-headed, impudent, discourteous, disobedient, and a long list of other things too numerous to mention. Take the following incident as a case in point.

Jim was the last one in the house that night from chores. He had finished scrubbing up and had just seated himself at the supper table, when he began:

"Dad, I am sick of luggin' feed from that grain bin down those stairs into the dairy barn. It's too darn far."

"It may be far," replied the father, "but I can't see that that alters the case any. The bin was built there and how can it be changed?"

"That's just the point," ejaculated Jim, "I think that it can be changed."

"You don't suppose," replied Mr. Ellsworth, "that I have lived on this farm for twenty years, without thinking of that before, do you? I don't see any way to remedy the difficulty without putting an addition on the east wing."

"Well, I do," replied Jim. "I have been thinking about it for a week. We could cut a hole in the wall and in the side of the bin and by means of a two-foot chute and a sliding door, for a shut-off we could run the grain through an opening just ahead of Flossie's stanchion."

To make a long story short, the father who understood boys, fell in

When Jim came into his 'teen years in a real sense he had a "new birth." Prior to this time he had accepted without question what he had been told. When his elders had given him a direction of an explanation, he had not questioned it. Now it was different. He was passing from a boy to a man. He remembered that passage in scripture:

"When I was a child, I spoke as a child, now that I have become a man, I put away childish things." He began to realize that he had a mind of his own. He wanted to use it. He had none the less respect for his parents and elders, but their ideas weren't meaning so much to him as formerly. When his muscles got tired carrying feed, his newly found "head" began to figure. Out from his ponderings came an idea all his own and he wanted to express it. Fortunately it was, that his father could lead him in the accomplishment of his ideas.

This trait of self assertion and of a tendency to question the ideas of others is a very real and tangible characteristic of the growing boy. He needs your help. He does not intend to be impudent, lazy or discourteous. He needs an opportunity to express these ideas which he originates or which differ from yours, if it is humanly possible to have them expressed. This is nature's way of training. so, after all, education is experience. I do not mean to "turn the place over to him." Keep him within due bounds. He is just as much in need of help with his new problems as the infant is in need of help in learning to walk. The mother stands close by, letting the child actually walk, but with ever ready arms to catch him just before he falls. Remember, if you stifle his having ideas of his own, you are depriving him of just rights.

May I make one suggestion in dealing with this characteristic of adolescence. Why not make a sort of "family partnership", where the good and bad ideas are thrown out on the table and discussed pro and con. The good ones will survive and the bad ones will die a natural death. The 'teen age boys and girls need this practice. Then sit down and make a little list on paper of their ideas that are not worth much and those that really annoy you. Then cross out the ones that he will likely outgrow. On the remainder give him kindly counsel in private. Private admonition is much more effective to adolescence. Don't use shot gun methods. Take one good idea at a time and try to help him work it out.

How We Do Business

(Continued from Page 85)

up with them, we were unable to get any answer, after writing them several times. After waiting a reasonable length of time, we sent a personal representative of AMERICAN AGRICULTURIST to call on the firm, and succeeded in getting the full amounts for both Mrs. Nally and Mr. French. Of course, the collection was a considerable expense to us, and had we not been able to obtain the money, we would have paid Mrs. Nally and Mr. French out of our treasury, in accordance with our guarantee. It is of course possible that this firm is perfectly honest, but the fact that they failed to answer our correspondence or to make any settlement until they had to is suspicious.

Publicity never made a cow give more milk.

When driving nails or screws into hard wood always rub them with soap; they will then go in easily without splitting the wood.

January Chicken Chatter

(Continued from Page 84)

and spangled also have their champions, and there is the same difference in choice of color in eggs.

Many Prefer Dual-Purpose Breeds

Many farmers prefer a dual-purpose fowl—one that is good for both meat and eggs. Again it is mostly a matter of personal preference in the matter of color, size and type, both as regards the fowl and the egg laid.

Officials conducting one of the great annual egg-laying contests in the East report, after an investigation of the records extending over a number of years, that there is really very little difference in the egg-laying qualities of the four principal breeds—Plymouth Rocks, Rhode Island Reds, Wyandottes and Leghorns. They state that the difference lies in the strains developed in any breed and that egg-laying strains can be developed as well on one breed as in another. The lighter breeds may lay eggs at a slightly lower cost because they consume less feed, but is more than offset by the greater weight attained by the dual-purpose breeds, and the higher price obtained when the fowls are marketed.

So take your choice of breed. Pick out the one that has the greatest attraction for you. Given adequate quarters, correct rations, and proper care and attention, it will prove satisfactory to you both in pleasure and profit.—W. C. MUILENBURG.

* * *

EDITOR'S NOTE: It is something like a year ago that we started a discussion in the poultry columns of AMERICAN AGRICULTURIST relative to the merits of the various poultry breeds. We had a liberal response from our readers. It is generally conceded that various breeds are best adapted to various purposes. We would like to hear more from our readers about their experiences during the past year with a new breed, if they have tried one, or with the breed they have been accustomed to raise. Confine your comments to something like 150 to 200 words.

How We Sprout Oats

SPROUTED oats form one of the best and cheapest green foods available for hens in winter. The method of sprouting is as follows: The oats are placed on trays about six inches deep to the depth of about two inches and sprinkled with warm water. Cover with burlap and sprinkle once a day. Allow the burlap to remain on them until sprouts are an inch high. Oats must not be disturbed while in the tray. Keep them at the proper temperature, about 75 to 85 degrees. Feed them when about 4 inches long. New heavy oats should be used. Feed for 100 fowls can be produced from less than a quart of oats at a very slight cost. The amount to be fed varies considerably with conditions, and can best be determined by the poultryman himself.—EDNA DALTON.

A Mash for Laying Hens

I have been using a prepared mash for my laying hens and have been told that it is much cheaper to mix my own. Would a mash of the following constituents be satisfactory: 100 pounds, 100 pounds of wheat middlings, 100 pounds corn chop, 100 pounds oats, 100 pounds beef scrap, 1 pound salt.—F. S., Pennsylvania.

The ration that you suggest is almost identical to the mash mixture for laying hens recommended by the New York State College of Agriculture. The only difference in it lies in the fact that the college recommends three pounds of salt, whereas you use one pound.

Assuming that the oats are ground in your ration—in place of whole oats you could very well substitute ground barley. A scratch grain to go with this mash could consist of 5 parts of cracked corn, 2 parts

barley, 2 parts of wheat and 1 part of heavy oats. All parts by weight. We are sending you the Cornell bulletin containing poultry rations.

The advisability of using a commercially prepared mash in preference to a home mixed mash, depends upon the amount of help you have available, the economy with which you can buy the ingredients and the amount of commercial mixture you have been buying. There are some instances where it certainly does not pay to mix your own home mixture for by the time you figure the cost of the original ingredients, the cost of labor of mixing and other attendant expenses, you can buy a high grade mash for the same money and sometimes less. Much depends, of course, on the amount of mash your flock consumes. It is a problem every poultryman must figure out in order to find the most economical method of feeding.

Planning the Farm Shop

(Continued from Page 83)

- 1—pair carpenter's pliers

The Original Metal-to-Metal Harness

We show you here a big picture of the way metal-to-metal makes a harness wear longer. See for yourself how metal wears against metal instead of against leather. The part shown here is the breeching dee. Notice how, before there can be any wear on the leather, a thick piece of metal must wear through first. This construction is carried out in every part of the Olde Tan Metal-to-Metal Harness where there is strain, wear or pull. Introduced only three years ago by Olde Tan, it is not yet known how many extra years of wear this construction will give a harness. It is estimated that it will make a harness last many more years. Olde Tan harness even without the metal-to-metal feature was capable of lasting 12 to 15 years. Harness with that many years behind it is

still in use. The maker of Olde Tan made harness for the Armies during the Civil War and parts of the harness were found on the battle fields in fairly good condition as late as 1885, or 20 years after the war.

At the tannery is a strap which was buried 10 years in a barnyard and which is still pliable and strong. In a leather strength test held in Chicago in 1923, Olde Tan straps and traces won over every other entrant, being more than twice as strong as one of the contestants and 30 per cent stronger than the second strongest. Hundreds of letters of real enthusiasm have been received from Olde Tan owners who declare that never have they seen such a harness—never such heavy strong leather, and never such careful and precise sewing and construction.

Home Bureau Philosophy

A Leader Tells What The Movement Means

The apparently impossible task of telling the whole Home Bureau story in ten minutes was achieved recently by one of the most popular and widely known leaders in the movement—Ruby Green Smith. Mrs. Smith, author of the Home Bureau Creed, is a practical housekeeper, a wise councillor and a beloved friend to the hundreds of women whose lives have touched hers. The "high spots" of her talk are given here.—MABEL G. FEINT.

"THE American government has long been spending millions for defense and to help solve problems of agriculture, industry, and commerce. But it is only within the last few years that the government has given direct aid to education relating to the greatest crop of all, the crop of children. The policy in the past has resembled somewhat the attitude of that father who, when reproached for calling a

with the homes—the most universal of institutions,—and with the communities, where life's satisfactions are measured.

"What are the Home Bureaus doing for home and community life? In partnership with the State School of Home Economics at the State College of Agriculture at Cornell University the home bureau members are improving the physical housekeeping so as to set free woman-power for the higher life of the home—the companionship a woman, who is not too tired, can give her family. Every family needs this, for life is more than meat or raiment. This released woman power is also being given to the communities in increased public service.

"It is the hope that eventually every home will be a 'home bureau kind of home.' The programs include how to feed the family in sickness and in health, and from the cradle to old age; how to dress the family in good taste without leaving no money for the higher life of books, music, and recreation; how to allot the family income so as to get full value received; how to beautify the home without lavish expenditures. As soon as funds are available the State School of Home Economics plans to offer help in child training. All these good housekeeping items are considered as way stations that lead toward the goal of living a more abundant life.

Outside the Home as well as Within

"The Home Bureaus are interested not only in living, but in people's learning to live together. Through the organization, the group spirit and ability of home-makers is gathered together for the solution of great and small problems of community

Much of the social life of the American colonists centered about the tea-table. In fact, one lady of position wrote a poetical farewell to hers when tea was given up for patriotic reasons. The tip-top table illustrated shows Chippendale influences. It was made in Philadelphia the latter half of the 18th century. Chairs of this time showed cabriole legs and an elaborate openwork splat which radically changed the line of the chair back, also the result of Chippendale's many novel designs. Elaborate carving occurred on especially legs and feet and this table shows it and the "pie-plate edge" which are lacking in earlier tip-top tables of the same period. (See article on opposite page.)

doctor for his dog, when he had not called one for his sick children, answered, 'But the dog is pedigreed'.

"Ten years ago the United States government provided for the Smith-Lever Extension Service on the assumption that education does not stop with school, but with life. Through this service information is carried from the colleges to the people on their farms and in their communities.

"The Home Bureaus are devoted to making home and community life more satisfying. In New York they are working in more than a thousand rural communities, on programs that concern the greatest asset of the nation—its people.

The New World Is Progressive

"No topic could be more important, for the nation's greatest wealth is not in its mines or its forests, its waterways or its railroads, or even its farm crops; the greatest wealth of any nation is in its people. This is why what we call the New World new, although in a sense it is no newer than the Old World. For America's rich resources remained largely undeveloped until there came to our shores progressive people whose enterprise and spirit have developed the other resources and made America what it is today.

"Conditions that govern this human harvest are largely home and community conditions. The Home Bureau programs deal

The slat back chair was much used by early settlers and many a New England farm has an old chair or two of this design or one much like it. That the colonists built for utility and not for fashion is proved by the fact that many of their chairs are still in actual use, but they also often introduced beautiful designs with slightly curved slat and turned back-posts. The style of chair shown grew out of the heavy English form of spindle chair. Some of the so-called "wainscot chairs" of these days were elaborately carved on back, arms, legs and panels, and had cushions of rich, deep-colored velvet or tapestry. Turkey-work was very popular for cushions and furniture coverings from 1646 on. (See article on opposite page.)

life. Unlike the castle of middle ages, with its moat and drawbridge, the modern home is in the community and of the community. Therefore, the modern housemaker cannot protect her own family by merely housekeeping within her own four walls; she may wash on Monday, iron on Tuesday, scrub on Wednesday, mend on Thursday, market on Friday, bake on Sat-

Rooms Of Our Forefathers Live Again Chairs And Tables, Cradles And Tankards, Gathered In New York Museum

FROM the quaint little oak-paneled cradle of some early colonial baby to the reproduction of the impressive Virginia ball room in which George Washington danced, the American furniture and decorations now assemble in the Metropolitan Museum of Art appeal to modern Americans with an interest just as keen as that aroused by foreign works of art, and far more personal.

Few of us can feel that our own times are part of history, and doubtless it would greatly surprise our ancestors to know that their pots and kettles, chairs, tables, cupboards, eating dishes and tankards, even the wall papers from the rooms and nails from the floors, are now housed under the same roof as works of art by Rembrandt and Raphael, Michael Angelo and Rodin.

For the American Wing, The Museum has collected in the surroundings of bygone years small and large articles which date from the days of the first settler through the war of 1812. Everything that could be moved from typical old houses has been brought here, and the walls, floors, and ceilings have been constructed in exact duplication of the originals.

Although the stately ball rooms and reception parlors from elegant southern mansions are both beautiful and interesting, it is the little low-ceiling, oak-paneled rooms of the earliest days that seem to appeal most to visitors who ramble through the three-storied wing which is entirely given over to this unusual collection.

The First Period

In this floor of The First Period—approximately 1630 to 1725—there is a large exhibition gallery, its great trusses modeled directly after those of the famous, "Old Ship Meeting House" of Hingham, Mass. Here are gathered individual pieces of interest, including the squat little cradle, a collection of pewter utensils and silver, and a portrait by the first American painter of record, a farmer, trader and magistrate of Long Island—Jacobus Gerritsen Strycker.

The rooms on this floor include a typical kitchen of a 17th century New England house, which in actual practice was also dining-room, living room

and bedroom. A great brick fireplace has a round bake-oven in one corner and in the other an ash sapling from which pots and kettles hung. Wooden pegs, which held together the main oak frame of the house, are seen in the girt of this low-ceiling room. The preponderant wood of this period was oak, while walnut, pine, cherry, hickory and maple were very much used. Later in this period walnut veneer came into play for decoration purposes.

Other rooms are the parlor or "Keeping Room,"

bine richness and beauty of design with the solid proportions appropriate to utensils in hard daily use.

The Second Period

An entirely different atmosphere prevades the second floor of the wing, where rooms of the Second Period—about 1725 to 1790—cover the time of the War for Independence. At once it is noticeable that the stern business of living has become much easier for the colonists. They are becoming wealthy and learning to follow foreign fashions in furniture and

in European taste, due to the Renaissance which brought in what is called the rococo style, are reflected in the more finished craftsmanship of the designs, yet in many there is still more than a hint of the sturdy pieces of the first period.

The first examples of the new mode in house architecture began to appear in America early in the 1700's and by the outbreak of the war it was firmly established. The standard plan was symmetrical, with a central hallway, flanked on either side by two rooms—an arrangement repeated on the second floor. In other words the style now known as "colonial" was evolved, simply in New England and more elaborately on the spacious estates of the south.

Even more than the architecture, the furniture which went into the rooms showed refined taste and a more conventional social life. A great deal of carving seen on furniture, together with the development of the more involved designs, especially the cabriole leg with various types of foot—the snake, the slipper, the grooved, the ball and claw. Gaily japanned and painted pieces became immensely popular and figured wall papers showing Chinese influences were used.

Fine American glass was made by Stiegle and Wistaberg, and Sandwich. Glass was also very popular. Much of the glassware follows the prevailing taste in design and decoration as does the very fine silverware of this period. Paul Revere, Jr., was one of the greatest craftsmen in silver, as his father had been before him.

Handsome furniture in the rooms on this floor is also a large exhibition gallery, showing the de-

(Continued on page 109)

In the main gallery of the first period are collected old pieces of furniture and decorations from the homes of early colonists. Here are the primitive trestle table of pine and oak, heavy oaken chests, sturdy chairs, and stools, and rich painted hangings from the East Indies. The rough hand-finished over-arching trusses are replicas of those in the "Old Ship Meeting House," built in 1681 and strongly showing the Gothic tradition which the colonists brought with them from the old country. The whole gallery suggests the strong, heavy rather primitive type of building and furnishing made necessary by the difficult conditions of early colonial life.

also from Massachusetts, which includes a chair made during the voyage of the good ship Anne to New England in 1623; a Connecticut paneled room with a huge fireplace; and the oldest room of all, a bed chamber from an old farmhouse of Hampton, New Hampshire, the fourth earliest settlement in New England. The huge square bed is made gay by embroidered linen cover and hangings. The brightest room on the floor is one from Woodbury, Long Island, the wood-work painted blue-gray and the hangings and chair-covers of home-woven blue linen. The Rhode Island room is that of a rich merchant, and contains many art objects from Europe and the Orient, including Delft tiles, representing Bible scenes, from which children learned the familiar stories.

Beautiful Examples of Silverware

Colonial silversmiths, both in New York and New England, were craftsmen of the highest skill. The Dutch influence in New York and the English in New England are plainly shown in the many fine examples of the Clearwater collections. Teapots, tankards, porringers, and bowls all com-

The chest was one of the principal articles of furniture used by the early settlers. First came the simple chest with the hinged top, then the chest with one or more drawers, and finally the chest of drawers on plain or turned

legs, which developed finally into the highboy.

The butterfly table illustrated is a variation of the gateleg table which had its beginning in the early American period. A vertical flap supports the drop-leaf, its unusual shape giving the table its name. The gateleg table is another example of furniture constructed for usefulness, as when closed it took up little floor space, an important item in small rooms.

VOL. 115 January 31, 1925 No. 5

Is the "Home Girl" Passing?

LAST WEEK the editor asked for readers' opinions on keeping the boys on the farm. It never used to be considered that there was need for ever discussing the subject of keeping the girls on the farm. But today many families are unexpectedly faced with the problem of the girl who wants to go out into the world and make her own way.

Like the farmer's son, his daughter often has worked long hours, hours of monotonous repetition of the same "chores"—cooking and sweeping and dishwashing, the most discouraging tasks in the world, because they must so soon be done again. And with it all the money is scarce. What comes in must be put back into the farm. Dollars to spend "just as you wish" are few and far between—and not always cheerfully granted.

"Pin money" has been both defended and attacked in AMERICAN AGRICULTURIST columns. Whatever justice or injustice it may involve, many farm daughters simply will have nothing to do with the laborious process of adding up the pennies by using every spare moment for work at home. In cities they can earn salaries that would have seemed a fortune to their mothers at their age. Furthermore, they work regular hours, have free time entirely at their own disposal and often find in the comradeship of other young people a freedom of thought and action that opens an entirely new life to them. It is not just the money that attracts them; the independence—perfectly consistent with decent living and the respect of others—has a strong magnetic power for the intelligent, alert, ambitious young American woman. Girls are leaving farm homes for city jobs and it offers a new problem to the already bewildered older generation.

As with the boys, the girls do not always realize that the city exacts sacrifices just as much as the country—different perhaps but no easier to endure. For space and air and sun, the city all too often gives cramped quarters, dark little boarding house rooms, air that seems lifeless and heavy. For the loneliness of the quiet country home one often gets the loneliness of the busy city streets—and the person who is lonely in a crowd is lonely indeed. The salary shrinks, too, with lodgings, food and clothing so costly. Yes, a job in the city is alluring but it has its seamy side too.

Mrs. Ruby Green Smith, who has "mothered" many of the girls at the State College of Agriculture and believes in extending the mothering instinct to the whole community, touches in her radio speech about the Home Bureau, on several reasons why this organization has in it the power to help solve the problem of the discontented farm girl. Like many other good things of life, the Home Bureau gives most richly to those who put most into it. The girl cannot just sit back and be helped. But if she gives it a fair chance, she will learn to do her work better and in shorter time and to find in the things and people about her the richest sort of interest and comradeship. "Keeping the girl on the farm" is a problem that may be solved almost before it arises.

Attacks On Farm Bureaus Arouses Farmers

FOR several weeks, there has been in circulation some ill-advised and destructive criticism of the Farm Bureaus. This criticism is for the most part not founded on facts and has for its purpose a sensational appeal for popularity. As is so often the case, it is cleverly prepared and enforced with plausible arguments.

However, we are glad to say that our belief in the great common sense of farmers has again been justified. In the county which was evidently chosen for the first attack on the Farm Bureaus, the farm people in a large mass meeting met and discussed the matter and were overwhelmingly in favor of continuing the Farm Bureau and in giving it adequate support. More than this, in the membership campaign now being conducted in rural counties all over the State of New York, there is more interest in and demand for Farm Bureau work than has been shown before in several years and there is indignant protest from every quarter because of the unfair attacks.

The business of the old farm has got to go forward, even in hard times. In fact, it is in times of depression that we need help more than when circumstances are more favorable. In our opinion there are few agencies that have done or are doing more, directly and indirectly, to help the farm business than the Farm Bureaus. It certainly speaks well for the future solidity of agriculture that a majority of our people fully realize this and believe in this great educational organization which is quietly working to put agriculture on a successful and permanent basis.

For Men Only

IN the January 17th issue of AMERICAN AGRICULTURIST Aunt Janet announced a contest for wives and spinsters to write the best letter on "My Ideal Husband." On the same page a lady wrote an article giving the virtues she looks for in her husband.

(Now, ladies, I know that everyone of you is listening in on this. The title at the head was too much for you, wasn't it? Never mind, there was no damage done, and we will forgive you if you will not read any further.)

Well, as I was saying before I stopped to tell the ladies where they got off, I do not believe there is any such perfect animal as the ideal husband described in the article in the January 17th issue. I am quite sure that a man so perfect would be a little too good for this old work-a-day world and would immediately ascend, like the flivver driver I heard about, up to heaven on high.

But all the same, it is rather fine, isn't it, for us men that, while we ourselves know how discouragingly short we fall in the attainment of our ideals, our sisters, sweethearts and wives see us through the eyes of love so that our failings are as nothing and our few virtues are magnified a thousandfold.

(And now, you women who have listened this far, you certainly got an earful that time, didn't you?)

It has occurred to me that some of you men could put the ladies in the shade if you had a chance to express yourself on "My Ideal Wife,"

so I am going to give you the chance. Suppose you think it over, and write down your ideas of the qualifications that a wife should have and send me the letter. Should she get up at half past four in the morning, kindle a kitchen fire, milk eight cows, get breakfast, and a few other little things like that? What kind of a disposition should she have? Would you like her good-looking, or doesn't that matter? In short, what is a good wife, anyway?

For the best letters, we will pay three dollars for the first; two dollars for the second; and one dollar apiece for all the other letters we can publish. In case of a tie, we will give the full award to each contestant. Letters should not be more than two hundred words in length. Address them to E. R. Eastman, Editor, AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York City, and be sure that they are mailed in time to be received at this office not later than February 16th.

I should be glad to hear from the unmarried men as well as from the married ones, but each letter should state whether or not the writer is married. Sign all letters, but feel free to write what you think, for all names will be considered absolutely confidential.

Where the Tax Problem Is

NO MAN in the United States is better informed on tax problems than Mr. Mark Graves, New York State Tax Commissioner. In a recent address, Mr. Graves said:

"Before we criticize and find fault and grumble at the size of our tax bill," he said, "we must, in all fairness, look and see why taxes have gone up, how our money is being expended and for what purposes. If we decide that it is desirable to have public improvements we should be willing to pay for them.

"And so that we may obtain the best results for our municipal expenditures, we should give more attention to the selection of public officials; we should take a more active personal interest in political affairs generally; we should give more attention to the selection of minor officials, such as aldermen and supervisors.

"The average taxpayer in this or any other city is either too busy or too proud or too lazy to take much interest in the affairs of his city. He feels it would be beneath his dignity, perhaps, to enter the political arena. He leaves public affairs to be attended to, in many instances, by those who want offices for themselves or for some of their friends, or who have some favors to ask, or perhaps those who, because of dislike, are trying to keep another out of public office."

As we have many times pointed out, the farmers' real tax problem is a local one. It is more important to have a good supervisor than it is even to have a good president; but as Mr. Graves so well states, we are not going to make much headway on our local problems until we ourselves give more attention to the election of local officials and particularly to what those officials do after they are elected. Nothing that we can think of will be so apt to decrease our farmers' tax bills as to insist that the county government prepare a detailed budget of how it expects to spend your money and then after it is spent, account to every taxpayer with a statement showing just how and why every cent was spent.

Aunt Janet's Chestnut

A RING at the doorbell just when your hands are in the cake dough or the baby has dropped off to sleep for the nap you both need—another man trying to sell something!

An exasperating experience, you'll admit. Here is how one victim describes it:

"Can I see the lady of the house?" asks the canvasser.

"Yes, you can."

"Well madam, I am selling a can opener which cannot be beaten. It opens any can that can be opened with a can opener and any can can be opened with this can opener that can be opened with any can opener. If you can show me a can I can—"

But the door shuts and open it again he can not!

When You Want To Can The Cow

After Killing Comes The Important Work Of Putting Up The Meat

HAS "the man of the house" Killed a Cow? And if so, is it up to you to can what he killed? If everything about a pig but the squeal can be used, surely we can preserve all of bossy but her moo.

First of all, authorities tell us, the animal must be healthy and in good condition when butchered. That goes, without saying. Next, the meat must be canned soon after killing. Finally, it must be cleaned, dressed and prepared for canning under scrupulously clean conditions. Thus all possible danger of any poisoning is prevented—indeed, any vegetable or animal food, when packed in glass, perfectly sterilized and sealed airtight, is put up by the safest means known to science.

But with a large carcass to dispose of, not everyone wants to do much canning and there are various ways of drying, smoking and curing the different cuts.

One farm woman who has long experience in preserving meat writes:

After the beef is butchered, we let it hang for 2 or 3 days in a cool place, and then cut it up. We cut quite a number of nice lean pieces without any bone in them, and put them in brine for 2 or 3 weeks, then take them out and wipe dry, and put each one into a little cheesecloth sack, and hang over the cook stove to dry. This makes our dried beef. This is the way we hang them up. We take two pieces of rope about 2 feet long, double them and fasten the ends to the ceiling about 5 feet apart, letting the loops hang down. Then we take a long, smooth stick, and fasten all the little cheesecloth sacks of beef on the stick, and put each end of the stick in the loops of rope.

Mince Meat and Corned Beef

We use some of the beef to make several large crocks of mince meat, as it will keep all winter in a cool place. The rest of the beef we corn. Be most particular about the barrel—never use a barrel that has been used for other purposes, or if beef has ever soured in it. Get a new barrel (a good molasses barrel is best) and clean it well.

Cut all the large bone out of the meat and then pack the beef in the barrel tightly. Cover with a hardwood board that will fit down in the barrel, put a clean stone on it, and it is ready for the pickling brine, which we make as follows: To 2 gallons water add 3 pounds salt, 1 pound sugar, 1 ounce saltpeter, and 2 tablespoons baking soda. Make as many gallons as you need, adding the same ingredients to every 2 gallons water. Put in a boiler, boil, skim well, and pour boiling hot over the beef. Be sure the brine covers the beef well—yes, more than covers it—as it will soak in the beef some. If you should ever need to add more brine, do not put it on hot—that is only done the first time.

To Pack Frozen Meat

Take a large, strong, tight, wooden dry-goods box, line inside with several thicknesses of paper, pasting it in closely and overlapping the seam generously, then put a thick layer of hay or sawdust in the bottom of the box, and cover with paper. Freeze hams, spare ribs, shoulders or any pieces of fresh pork, beef, or poultry that you wish to keep fresh for future use, and be sure that the freezing is most thorough, so that each piece is frozen all the way through. Wrap each

piece separately in several layers of clean, light brown paper, then pack a layer of these pieces in a box prepared as above, fill all the crevices between the pieces with fine hay, packing it in solidly, cover the layer of meat pieces with about 5 or 6 inches of hay, then pack in more meat as directed above, and so on until all the frozen meat is stored, or the box is full, being careful to have plenty of hay all around the sides, and on the top. Next put on a tight cover of wood, also lined with paper inside, and throw some thick covering over the box, such as an old comforter, blanket, fur robe, or piece of heavy carpet. The box, of course, should stand in a cold and dry place. Frozen meat packed in this way will remain frozen and sweet for months, and will even withstand quite a long thaw.

Beef Pickle

For 100 pounds beef, use $\frac{1}{2}$ pack salt, $\frac{1}{4}$ pound each saltpeter and soda and 1 quart molasses, or 2 pounds brown sugar. Dissolve

The alcove from Alexandria, Va., contains a mantelpiece from General Washington's favorite hostelry. The wall paper is of the painted English type much in vogue at the time (about 1735). An old letter ordering such a paper commands "Some Landscips at the Bottom" and "flying Birds to make it more Beautiful." The furniture in the alcove includes some good examples of shell-decorated, block-front work. (See article on page 95.)

the saltpeter, soda, and salt in a little warm water. The meat will be ready to use in 10 days. For sliced beef, add mace, cloves and allspice to the above pickle.

Always, in salting meat, be sure the process is thoroughly done. Pay special attention to the meat around the bone, as it is here that loss is most apt to occur. Running a knife around the bone, then salting, enables the salt to work well inside and reach all the meat.

Now for the canning recipes, which have all been thoroughly tested out and found delicious. One enthusiastic housewife writes that now she always hopes company will come because it is such fun to surprise them by taking down a dinner from the shelf! For it is possible to put up vegetables and gravy with the meat and thus have your main course all ready and together.

How To Go About It

The apparatus required for canning meats can be found in any farm kitchen. A wash boiler with a lid, a false bottom for the boiler made of wooden slats set close enough together to keep jars from touching the bottom of the boiler; ordinary cooking utensils, and clean, perfect jars, tops and rubbers are all that are necessary.

The method of procedure is as simple as the required equipment. Prepare your meat as for immediate serving—roast, fry, stew, boil or broil. Pack into thoroughly sterilized jars. Place rubbers in position. Screw tops in place, then turn back one quarter turn as an airtight jar would burst. Place in boiler on top of slatted bottom. Fill boiler with water (of like temperature as air) to cover the jars one inch over top. Sterilize for 3 hours. Remove from boiler, immediately screw tops as tightly as possible, label, and your meat is ready for storing.

In cold meat packing observe these simple rules to insure success:

1. Be sure that your jars, tops, and rubbers (or whatever containers you use) are thoroughly clean and perfect.
2. Never can meat until 24 hours after it has been killed, or as soon as the animal heat is out of it. Also do not allow meat to freeze before canning, if it can be avoided.

3. Screw down tops of jars immediately after removing from boiler. Various containers may be used. I speak of the screw-top jar only as an example.

4. Jars need not be full to keep perfectly.

5. Count sterilization period from time water starts boiling.

Roast Beef, Pork, Lamb, Etc.

Select roasts. It is convenient to prepare as many at one time as the oven will hold. Trim meat, wipe carefully. Place in roasting pans in which some grease has been heating. Sear nicely to prevent escape of meat juices. When browned on all sides, sprinkle with salt and pepper to taste. Add a little boiling water. Roast meat until it is done through, but not entirely tender. It should not be red inside. Slice, pack into jars to within 1 inch of top. Divide the gravy proportionately among the jars of meat. Place rubber and tops in place and sterilize in three hours.

A 10 lb. roast requires 3 tablespoons of grease, 2 tablespoons of salt, $\frac{1}{2}$ teaspoon pepper, and 1 cup of boiling water. Onions, carrots, parsley, cloves, or other

spices or vegetables may be added to suit the taste.

In making gravy when opening jar, heat the entire contents of jar. Remove meat to a warm platter in the warming oven. Let gravy cook down until only grease remains. Stir in 1 tablespoonful of flour, brown. Add cold water, salt and pepper to taste, and stir constantly. You will find this as good as fresh roast beef gravy.

Spare Ribs or Roast Ribs of Beef

Roast as if for immediate use, brown nicely and cook until well done. With a sharp knife cut down the inside of each rib, remove bone, and cut meat into suitable pieces for canning. Pack into hot jars, add gravy and sterilize three hours.

Steak and Chops

Slice, cut into pieces convenient for packing. Wipe meat thoroughly. Sprinkle with salt and pepper. Sear quickly in hot butter or beef fat. Pack into warm jars into which pour enough pan drippings to make a nice milk gravy when opened. Four or 5 tablespoonfuls will be about right. Nicely browned onions or small browned Irish potatoes may be packed with the meat with excellent results. Sterilize three hours. (Continued on Page 100)

10 = 20

10 Bags of Multiple-Strength

equal

20 Bags of STANDARD Fertilizer

It's the plant food in fertilizer that makes crops grow. Buy on the basis of plant food.

International Multiple-Strength Fertilizers are very high in plant food content. An 8-16-8 Multiple-Strength contains *twice as much* plant food as a 4-8-4.

You save labor in hauling and handling when you use Multiple-Strength Fertilizers. 10 bags contain as much plant food as 20 of the standard fertilizer.

"Twice the value in plant food—but not twice the price!" Ask your dealer or write us for prices.

Fruit Growers Express Themselves About State Fair

M. C. BURRITT

THE Seventieth Annual Meeting of New York Horticultural Society held at Rochester, January 14th to 16th, was a good one. The attendance was rather better than usual both at the Exhibits and at the program. A considerably larger membership was paid in at the close of the meeting than for several years. Conversations with growers reflected a rather more optimistic note in the fruit industry than has been the rule for the last three years probably due to higher prices.

Several features in the program are especially worthy of note. Perhaps the outstanding point of interest was the visit and address of Lieutenant Governor Lowman. The Governor's presence attracted a good deal of attention not only because of the high office which he holds but because he discussed the State Fair with the members of the Society very frankly. The Officers of the Society have been very much displeased with the treatment they have received at the hands of the State Fair Commission and the Lieutenant Governor promised more consideration this year.

What the Society Wants

He was told very plainly that the Society wanted three things and three only. First: It wants to be assured of a suitable building and adequate space in which the fruit of its members can be exhibited. Second: It wants the Fruit Department in charge of Commissioner Pyrke or some other man equally intelligent and sympathetic to the problems and needs of fruit growers. Third: It wants a real fruit grower as Superintendent of fruit. All these needs the Lieutenant Governor promised to do his best to secure and pledged himself to help "get the Fair back into the hands of farmers where it belongs." The Society appointed a special State Fair Committee consisting of Ex-President C. S. Wilson of Hall, as Chairman; T. E. Cross of LaGrangeville, and M. C. Burritt of Hilton to work with Lieutenant Governor Lowman to secure this common objective.

Cooperative Marketing Discussed

A second feature of the meeting was the complete, free and frank discussion of the mistakes, the good features and the present status of cooperative marketing. A whole evening was devoted to this subject. Strong, clear cut analysis of the situation were presented by Lloyd Tenny, Assistant Chief of the U. S. Bureau of Markets and Professor W. I. Myers of Cornell University. These talks were supplemented by talks by A. B. Buckholz and K. B. Lewis who discussed Hudson Valley experiences with cooperation, and Carl Coats of the independent Barker Association of Niagara County. Not in many years has a group of fruit growers heard the subject discussed so frankly and honestly. Perhaps some growers may misinterpret this session as a pessimistic one. Quite the reverse is true. Never was cooperative marketing on a sounder basis. The great need of the hour is for clear, sane thinking and action based on facts drawn from experience. If growers will only build cooperative organization in the future on this sound basis, it has a better chance of success than ever before.

Fruit Enemies Thoroughly Discussed

A third, outstanding feature of the meeting is not a new but one which is always a feature; namely, the splendid discussions of insect and disease control, of varieties, pruning and cultural practices by Station and College men and others. These are always to the point and very helpful to growers who continue to show the greatest interest

A Patch of Small Fruits on Every Farm

SMALL fruits are always coveted by the small housekeeper and many of them are so easily raised it is surprising more people do not have them. One of the best of the small fruits is the currant.

Currants will grow in almost any good garden soil. A slightly clayey mixture, well mulched with manure is unrivaled for either currants or gooseberries. It is necessary to plant currant bushes in a cool place, somewhat shaded if possible. They do not thrive well in too warm a place nor do the currants grow as large when exposed to the sun as when shaded. Currant cuttings do best when set out in the spring of the year and should be planted three or four feet apart.

Cultivation Pays.

It is better to keep the soil around them loose, any dead canes must be cut out. Really, however, the bushes require very little care and often bear a few currants the second year. This, of course, cannot be depended upon, but two or three seasons is sufficient for the bushes to mature enough to produce fruit plentifully.

Both currants and gooseberries need so little attention after they are started that the busiest may often have them by merely taking the time to pick them. Gooseberries grow in the same kind of soil and under nearly the same conditions as currants. These small fruits can be used in numberless ways in season, and may be put up in a variety of ways for winter use.

Nothing Like Gooseberry Tarts.

An old fashioned garden, with its hollyhocks, Sweet William, four o'clocks and various other flowers that our grandmothers were so fond of and which are now becoming so popular at the expense of the newer and modern kinds, is not complete without its quota of gooseberry plants.

Gooseberry tarts and sauce were considered a luxury by our grandmothers, in fact, we think in this modern day that they are pretty good and quite appetizing, as well as very healthful. Gooseberries should be planted in every garden, as they are immense yielders, and your surplus will find ready sale at good prices to your neighbors.

They will grow in partial shade along the fence, at the end or side of the garden and should be planted about four feet apart and fertilized well each year for best results; the old canes trimmed out and also all young weak ones. This makes large fruit, which is better to pick and certainly easier to sell at a good price.

The gooseberry is a native of this country, growing wild in some sections. In southern and warm countries they do not thrive very well. England produces many kinds, mostly of the extra large type, those, however, mildew very badly in this country, and unless they are continually sprayed, are practically worthless here. We have, however, many excellent native sorts, some are very thorny and quite unpleasant to pick on that account, while others have few thorns and are a pleasure to pick—H. P., New Jersey.

Keep Planting Tomatoes

BERTHA ALZADA.

IF YOU want to get the best tomatoes from your garden do not depend on the one planting, for while tomatoes do bear continuously, the fruits become much smaller after the first set have ripened. If we would have large fruits all through the season we will need to plant later, and the best way to do this is to plant a short row in the garden when the soil is warm enough, and two or three weeks later plant another short row. Transplant these to where they are to grow when the right size to transplant well, selecting a day best suited, and you will find they will begin to bear following the main crop of the early planting, and as the first lot of these begin to produce smaller fruits, the next planting will be ready to bear, and you can have large fruits all summer.

HARRIS SEEDS

The Most Successful Gardeners use HARRIS' SEEDS

That's one reason they are successful. Another is that, to succeed, a gardener must be a shrewd man and one who knows where to buy seeds to the best advantage. Harris' seeds are grown in the north and produce earlier and better crops than seeds grown further south. They are raised according to modern scientific methods of breeding which keep them up to the highest possible standard as to quality and yield.

We are large growers of Farm Seeds, Vegetable Seeds, Flower Seeds, Gladiolus, Dahlia and other bulbs and many flowering plants. Our new catalogue in colors contains many unusual suggestions for your garden and offers you the opportunity of buying seeds of a very superior quality direct from the grower at wholesale prices. Send for Free Catalogue. If you raise vegetables for market ask for our Market Gardeners' price list also.

JOSEPH HARRIS CO., R. F. D. 12, Coldwater, N. Y.

Earliest Tomato

Due bill for 10c with each order. Money back if not satisfied. Catalog of Seed Bargains FREE. Send today. J. W. Jung Seed Co., Farm 1 Randolph, Wis.

New Money-Making RASPBERRY

Yields fair crop in Fall of 1st year, heavy crop 2nd Summer. A real red (not purple) Raspberry. Firm, stands shipping well. Catalog of Small Fruits, free. Write today. L. J. Farmer, Box 241 Pulaski, N. Y.

More Money from Your Crops

You can do it with seeds that have vitality and life—that are of high germination and adapted to the soil. The work of preparing the land and planting is the same whether you use ordinary seed or pedigreed seed. But the crop tells the story; added profit—often double or triple—comes from using hardy, big-yielding, Michigan-grown, Isbell's seeds.

46 Years of Better Seeds

For nearly a half century, Isbell's have been developing yield, vitality and hardiness in seeds. Ceaseless experimenting, careful selection, better growing, sorting and cleaning methods have done this. 200,000 customers have proved this profit-building quality—they plant Isbell's seeds year after year and get bumper crops. We grow our own seed—you buy direct from us, saving money and eliminating all risk of substitution.

This Valuable Book—

The 1925 Isbell's Seed Annual tells how to select seeds how to prepare soil, gives cultural directions, and quotes direct-from-grower prices. The coupon brings it Free.

MAULE'S SEEDS
ONCE GROWN ALWAYS GROWN

Do Not Delay with Seed Corn

I would like to have your advice relative to the corn market. Would you advise purchasing corn early?—K. S., New York.

As far as we can see it we think it would be mighty good business on your part to lay in your seed corn early. There is very little seed corn that was well matured last year. Only a few weeks ago we attended a very interesting meeting of the managers of the institutional farms owned by New York State. The seed corn proposition received a great deal of attention at that meeting. Professor Bussell of the Department of Plant Breeding at Cornell led the discussion, taking up individual varieties and reviewing their adaptability and as far as grain and silage purposes is concerned it is his opinion that farmers will do well to lay in their corn early.

Feeding Cull Beans to Cows

I would like to have your opinion about feeding cull beans (cooked) to cows and also a good balanced ration to feed with them. I have corn silage, clover, hay and corn stover. I have fed cooked beans to cows for a number of years and almost always fed them with corn and oats ground.

—H. B., New York

THERE is no reason for cooking beans for cows. You will get as good results from ground beans as you will from rooked beans, although there is no objection to cooking if it is less labor and less trouble to cook the beans than it is to grind them. We suggest the following mixture to use with the ground beans: 200 pounds wheat bran; 300 pounds ground corn and oats; 300 pounds ground beans; 200 pounds linseed oil meal.

If you cook the beans, make the same mixture of bran, corn and oats and linseed oil meal and feed an equivalent amount of cooked beans with this mixture.

The above mixture is based on the following. We have found it to be a good simple mixture used by many with good results; 300 pounds wheat bran; 200 pounds hominy; 300 pounds gluten feed; 200 pounds oil meal.

Ground beans are practically equal to gluten feed and ground corn and oats are nearly equivalent to hominy, therefore, you can see how we made up the mixture which we feel positive will give good results.

When You Want to Can the Cow

(Continued from Page 97)

Hungarian Goulash

Eight pounds of beef or other meat. 2 qts. tomatoes, 8 tablespoonfuls grease, 4 stalks celery, 8 finely chopped onions, 6 bay leaves, 4 carrots cut fine, 24 pepper corns, 4 tablespoonfuls parsley. Salt, pepper, paprika, flour.

Cut meat into small pieces. Sprinkle salt, pepper, and flour. Heat the fat in a frying pan. Add onions, carrots, and celery. Fry to a nice brown. Add meat. Brown and stir often to prevent scorching. Now add tomatoes, chopped parsley, and spices. Whole spices should be tied into a muslin bag and removed when meat is done. Simmer 1 hour, longer if desired, for immediate serving. For canning, cooking 1 hour is sufficient. Pack into hot jars. Sterilize three hours. This is a good way to utilize meat scraps or tougher cuts.

Hamburger

Scraps of meat either raw or cooked may be run through the feed chopper, seasoned with salt and pepper, mixed with beaten eggs and bread crumbs, and chopped onions, if desired. Make into small cakes. Fry nice and brown. Pack into hot jars, add enough pan drippings to reheat. Sterilize three hours.

If you use a pressure canner, process meats one hour at ten pounds pressure.

Using a scrub bull on the herd is like investing money in Continentals. The quantity is increased and the income curtailed.

World's Champion Agnes Wallace

Her Owner "Wouldn't think of getting along without KOW-KARE"

M. G. Welch & Son, Burke, N. Y., owners of this Champion Ayrshire write us, "We have used Kow-Kare in our herd for years and would not think of getting along without it. We consider it the best cow tonic known."

COW owners who have made the business of dairying for profit a close study know that they cannot leave the health of their milk cows to chance. The average dairy cow is "forced" to get every last ounce of milk year in and year out—a tremendous strain on the most robust physical system.

During the winter months, especially, the added strain of digesting quantities of dry feeds puts a severe test on the milk-making organs. Small wonder they become sluggish, fail to keep up a profitable yield or even become the prey of disease.

Invigorate the Milk-Making Organs

Kow-Kare is a medicine-tonic that acts directly on the milk-making functions—the organs where all cow diseases start. It eliminates such common cow disorders as Barrenness, Abortion, Retained Afterbirth, Scours, Bunches, Milk Fever, Lost Appetite, etc., by causing the organs of assimilation and reproduction to function normally and thrive on nature's foods.

Kow-Kare has a definite action in increasing the milk yield through this invigorating action on the milk-making organs. It enables the cow to turn into milk ALL the milk values in the feed she consumes.

Try feeding Kow-Kare this winter and you'll never again be without it. A tablespoonful twice a day, one week in each month is the feeding plan most often followed. The return in added milk-income and freedom from disease will pay you a hundred-fold.

Our free book, "The Home Cow Doctor," tells all about treating all cow diseases—besides giving a wealth of valuable information on general dairy topics. Send for your copy today.

Sunflowers for Ensilage

A QUESTION from a reader asks if sunflowers really make good ensilage. Riding through the dairy sections in the late summer or early fall, one is struck with the increasing acreage which is being devoted to sunflowers for ensilage purposes.

Sunflowers do not make as good silage as corn, and if a farmer can get a good stand of corn, he should stick to it. But there are places where, because of climate or soil, or both, it is difficult to get corn for silage purposes, and this is where the sunflowers come in to good advantage.

Good at High Altitudes

Sunflowers do comparatively well where the altitudes are high, and where the temperature is low during the growing season. They are much more resistant to frost than corn. They like a rich soil, but will do fairly well on poor soils. The crop may be planted with the ordinary corn planter in much the same way in which corn is planted, or one may use the ordinary grain drill by stopping a certain number of holes or feeds to get the proper distance between the rows. The rows are usually 28 to 36 inches apart, and the plants should be about a foot apart in the row. Proceeding in this manner, about 6 to 8 pounds of seed per acre is necessary. The crop is cultivated and harvested in the same way as corn. If you have poor success with corn, give the sunflowers a trial on a small scale.

The ripened seed of sunflowers is excellent for hens

Using Corn Waste

WE CALL corn an expensive crop to raise because of the labor involved, so we have practically quit and our neighbors have done the same; but once raised, it seems absurd to waste any of it. For twelve years we have done our own grinding with the home grist mill and incidentally we have learned many things. We tried experimentally grinding ear corn, cob and all, and found that stock liked the resulting ground meal and did well on it; far better than on commercial ground feed. The natural inference is that some "fillers" are worse than corn cobs.

Later we tried grinding the stalks and leaves, and found it perfectly satisfactory, except that our engine—5 h. p.—was hardly large enough, as much more power is required than for grain alone. However, if the stover is thoroughly dry it grinds well and makes a nice chop that stock eat readily and with good results. Naturally a fair amount of ground grain should be mixed with it to make a balanced ration, but the stover, like the cobs, is superior to many feeds on the market.

Nothing is nicer than dry cobs to use for smoking hams, and any amount of cobs may profitably be utilized for kindling. Probably the greatest use for fodder is in silage, but I am not sure that it is the most profitable use.—Mrs. E. M. A., Chautauqua County, N. Y.

Make the Straw Work

WE USE buckwheat straw mostly for bedding, but we have noticed that stock like to eat at the stack while they are out for water and exercise on winter days. It makes a fine shelter if spread by blower on roof and unprotected sides of winter shed.

Oat straw may be fed to dry stock, and refuse used for bedding.

If there is an excess of straw it may be spread over ground to be plowed under, adding to fertility and lightness of soil.

Do not let any farm stock go without a warm, dry bed when there is straw of any kind, thus turning it into fertilizer that is ready to spread on land to be spring plowed.—Mrs. R. S., Montgomery County, N. Y.

Lack of paint not only lets a building look wretched; it lets it rot. Now is as good a time of the year as any to paint 'em up.

Save Money Two Ways Building or Remodeling YOUR Barn

On the average farm, once in 25 years perhaps, a new barn has to be built or the old one remodeled—hence like most farmers your barn building experience is probably limited. Possibly too, you've waited several years to get at that building or remodeling you're now figuring on doing this spring.

One thing is certain—you want to save expense wherever you can, yet get the best barn possible for the money. That's exactly what the Loudon Barn Plan Department, established years ago by William Loudon, is here to help you do.

Profit by this Plan Service

More than 15,000 barn owners have profited two ways from the suggestions and plans freely given them by Loudon Barn Plan Experts. You too, can do the same. These carefully worked out plans show how to use lumber with little or no waste—avoid expensive changes—save carpenters' time, etc. You get an ideally arranged barn that will save you hundreds of hours of time and labor every year.

Many years of studying, planning and observing barn construction has made the Loudon Barn Plan Department the leading authority on barn building. The benefit of all this knowledge and of our 58 years' experience in solving thousands of barn problems, gained in building Loudon Barn Equipment, is at your service to help you save money in building or remodeling your barn.

Tell us number and kind of stock you want to house—and any other special requirements you may have—when you desire to start erection. We will immediately send you free of any charge or obligation a suggestive plan with blue prints to fit your particular needs. Write at once.

Get Loudon Barn Plan Book

The Same Larro The Same Formula Feed

The Larro formula will never be changed, regardless of the cost of ingredients, unless a better one is found and proved. This because the Larro formula, by years of experiment and practical feeding tests, has demonstrated that it will economically produce the most milk and keep cows in health and condition.

Each ingredient is brought to an exact standard before being used, then accurately weighed into the mixture. The amount of each ingredient per ton of feed never changes. The result is always the same feed—no matter where you buy it, or when.

The Child Labor Amendment

NOW AWAITING RATIFICATION BY THE STATE LEGISLATURES

1. The Congress shall have the power to limit, regulate, and prohibit the labor of persons under 18 years of age.
2. The power of the several states is unimpaired by this article except that the operation of state laws shall be suspended to the extent necessary to give effect to legislation enacted by the Congress.

A Common Misunderstanding

A lot of people, reading the simple text of the pending Child Labor Amendment, have jumped to the conclusion that under this, Congress would prohibit everybody under eighteen from working even in safe trades and proper conditions; that Congress would keep Susan from helping mother with the dishes or seventeen year-old John from taking a job to support a widowed mother! So far, no state legislature has thought of trying to do anything so idiotic and it is hard to see why anybody should lie awake nights fearing that Congress would try to—even if it could. But Congress won't and in the years previous to 1920 when it supposedly had power in this field, it didn't. People who hold such fears—and an amazing number of people do!—must think that Calvin Coolidge, Senators Henry Cabot Lodge, George Wharton Pepper and the rest of the overwhelming Republican majorities that put this amendment through Congress, must have gone crazy! Cheer up, friends, they didn't!

Liberty Is Still Secure!

The state legislatures have the above powers over child labor now; this amendment would give concurrent power in this field to Congress also.

The state legislatures are under the restriction of the Federal constitution that "no person shall be deprived of life, liberty or property without due process of law" and this would likewise apply to Congress. If a state legislature now should pass a law that no person under eighteen should be allowed to labor, it would be promptly declared unconstitutional by the courts as depriving such persons of "liberty"—the liberty to work—as "unreasonable" and beyond the limits of the "police power" of government. And if Congress, under this amendment, should pass such a silly law, the law would meet the same quick end.

Roscoe Pound, Dean of the Harvard Law School and William Draper Lewis, Dean of the University of Pennsylvania Law School, have issued careful opinions to the above effect.

The Republican State Platform of 1924 says under the heading of Social Welfare: "The purport of welfare legislation is to safeguard and protect the future citizens of the nation. Unless we can produce wholesome and happy children material prosperity, industrial development and natural wealth will all be futile. In conformity with this spirit and following Republican policy and tradition, we favor the ratification by the Legislature of the State of New York of a Twentieth amendment to the Constitution of the United States proposed by a Republican Congress for the prevention of child labor."

The Democratic Party stands for the ratification by the Legislature of the Federal Child Labor Amendment.

New York Committee for the Ratification of the Child Labor Amendment

105 East 22nd Street

New York City

WHY 18?

In 46 of the states, including New York, certain kinds of child labor are prohibited right now up to the age of 18; for example, extra hazardous labor, night work and work in excess of 8 hours a day, and the courts sustain such laws as within the "police power" of government and hence not a deprivation of "reasonable" liberty of the individual.

The Federal child labor laws which were declared unconstitutional only went to 16, but Congress should be able to reach the 16 to 18 group as the states do, in certain cases.

Now For the Story of This Amendment!

For thirty years a large number of humanitarians have worked publicly and unselfishly to prevent children on account of the cheapness of their labor, from being employed at work beyond their strength in factories and mines. They secured state laws and some of them, New York's especially, are very advanced. But some states have been persistently backward and the laws of the progressive states are in constant peril of repeal in the face of that low-standard competition.

In 1916 President Wilson signed the first Federal Child Labor Law which prohibited interstate commerce in products manufactured in factories employing children under fourteen, or children between 14 and 16 if employed more than eight hours a day or at night work, or under 16 in mines and quarries. In 1918 it was declared unconstitutional by the Supreme Court.

In 1919 a second law, differently worded, but with the same age limits, was passed. This was also declared unconstitutional. It then became necessary to amend the Constitution and a great deal of time and thought in Congress was given to the simple words of this pending amendment. It passed by a large vote and is now before our legislature for ratification with the endorsement of both parties.

The purpose—and the only purpose—of this amendment is to permit enforcement of just such moderate and reasonable and very necessary laws by Congress in the interest of many thousands of children now being exploited in industries in backward states with remote chances of relief otherwise.

New York Farm News

Western County Farm Notes by M. C. Barritt

I WAS much interested in Gilbert Guler's article on the agricultural outlook in a recent issue of AMERICAN AGRICULTURIST. It is a conservative and clear view of the probable future which I hope we have all read. We need more of such reading to help guide us in making our decisions now and next spring. Only one thing, it seems to me Mr. Guler has overlooked. While this last year has shown some improvement over those immediately preceding, and while this coming year seems to promise fairly well, those of us engaged in the business are not likely to forget the three years just past and their cumulative effect of debts and things postponed. For this reason any gains in 1924 and 1925 will probably be entirely absorbed in cleaning up old obligations. Farmers are not free to make extensive repairs or improvements or to purchase much new machinery as yet. It isn't that last year was so bad. It is that last year was the fourth successive year of low price returns and high costs.

Bank Balances Encouraging.

Despite the fact that western New York farmers are little if any better off, there is an unmistakable note of optimism among them. This is no doubt partly due to increased prices for fruit, wheat and a few other products and to the approach of spring when the spirits go up like the sap in the trees. That it is probably justified, however, is indicated by the report of a country bank, which inquiry shows to be quite typical, that it has \$120,000 less notes and \$80,000 more deposits than a year ago.

Farmers are slowly paying up their borrowings. On the other hand, a blacksmith tells me that in thirty years experience he never had so many outstanding accounts or found them so hard to collect. I have heard similar complaints from tradesmen. Merchants who are closest to farmer buyers are not planning on big sales to him this coming season.

Fruit Meeting the Big Winter Event

The annual meeting and exhibit of the State Horticultural Society is one of the biggest events of the year for western New York fruit growers. To them thousands of growers go, some to hear the fine program and discussions, some to study the comprehensive exhibits, look over and purchase necessary machinery and supplies, and almost everybody to visit and exchange experiences with old and new friends. Out of it all we bring away much new and up-to-the minute information, old fact clarified, renewed faith in our industry and vision and inspiration for the future. It is, indeed, a great institution of which all fruit growers are proud and which still more of us should utilize.

Little Farm Work Possible.

Winter is still steadily with us. We have had no January thaw and practically no let up in the steady cold since early December. The roads are still covered with ice, but there is not very much snow, just enough, however, to cover wheat nicely. It is pleasant winter weather, with both good sleighing and "wheeling," although the sleighs and "bobs" have pretty much given way to gas buggies in this section where the highways are kept open by the counties.

Farm work is pretty quiet yet. A few have cut and hauled a part of their year's wood supply. Now and then a man has a good start on his pruning. But for the most part farmers haven't started next year's work. Corn husking is gradually being worked off and some manure hauled out. Cabbage is now selling at \$18 to \$20 a ton. Wheat is bringing as high as \$1.85, a figure which surprises most of us. Five to five and a quarter cents a pound is paid by local

dealers for pea beans and eight to eight and a half for the marrow varieties. Potato prices, too, have made small gains, bringing from 40 to 60 cents at local loading points.—M. C. Burritt.

Fruit Growers Meeting

(Continued from Page 98)

in them. An especially not-worthy talk was an illustrated lesson on apple scab and its control by Professor H. H. Whetzel of the College of Agriculture on Wednesday evening, starting with the declaration that if "a man understands how scab develops he can control it," he pictured graphically by means of charts and enlarged photographs bud, leaf and fruit development together with the life history of the scab, especially in relation to rainfall. His outstanding recommendation for protection against scab was to get a thorough coating of spray or dust on all new leaf surface immediately preceding rains, especially during the critical period from the opening of the first buds to the formation of fruit. Whetzel held his audience for two hours and a quarter and was kept busy up to the very last minute answering questions.

C. H. McClew Elected President

C. Herbert McClew of Newfane, Niagara County, was elected president for the ensuing year, succeeding Charles S. Wilson, who has held the office of president since the death of J. B. Pease of Gasport in 1922. Mr. Wilson completed Mr. Pease's term and was reelected in 1924. The executive committee decided to record the 1923 term of Mr. Wilson as a full term, for Mr. Pease died shortly after he took office. The by-laws of the society do not permit a president to serve more than two consecutive terms.

The other officers elected by one ballot cast by the secretary were: First vice-president, E. W. Mitchell, Stuyvesant Falls, Columbia County; second vice-president, J. S. Case, Sodus, Wayne County; third vice-president, M. C. Burritt, Hilton, Monroe County; fourth vice-president, Azro Miller, Claverack, Columbia County; secretary-treasurer, Roy P. McPherson, LeRoy, Genesee County. Members of the executive committee elected for three years are: Carl G. Wooster, Union Hill, and Roscoe Teater, Upper Red Hook.

Important Resolutions Presented

Several important resolutions were presented to the resolution committee and later placed before the meeting as a whole. The society went on record as opposing any lowering of income taxes until the direct state tax on land has been removed. It also favored the lowering of the 18 year old age limit for drivers of automobiles. It also approved a petition for the erection of a horticultural building at the State Fair grounds at Syracuse. A resolution was referred to the committee authorizing the president to appoint a committee of three members of the society to work on the Rural School question with other organizations. In the resolution relative to the age limit for auto drivers, the society went on record in favor of the establishment of a thorough road test for farmers' children under the age of 18 and whose services are needed by their parents in the farm work.

New York County Notes

Tioga County.—Tioga county has been and is at this writing, January 16, having some very cold weather. The mercury is ranging around zero all the while. Yesterday it was 24 below in some sections in the county. Ice harvesting is the occupation of the day.

Reviewing the Latest Eastern Markets

MILK PRICES

THE Dairymen's League Cooperative Association announces the following prices that dealers will pay the League during the month of January for milk testing 3% in the basic zone of 201 to 210 miles from New York City. *It is to be understood, of course, that the prices mentioned below are not received by the farmer, but go into the pool. They represent the prices dealers pay to the League.*

Class 1 Fluid milk	\$3.07
Class 2A Fluid Cream	2.20
Class 2B Ice cream	2.25
Class 2C Soft cheese	2.15
Class 3A Evaporated whole milk	
Cond. whole milk	1.90
Class 3B Whole milk powder	1.85
Class 3C Hard cheese other than American	1.65

Class 4 prices will be based on butter and American cheese quotations on the New York market.

Sheffield Producers

The Sheffield Farms Producers announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$3.07
Class 2	2.20
Class 3	1.75

Class 4 prices determined by butter and cheese quotations on the New York market.

Non Pool Cooperative

The Non-Pooling Dairymen's Cooperative announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$2.80
Class 2	2.20
Class 3A	1.80
Class 3B	1.75

Interstate Producers

The New York State Milk Producers Association (Philadelphia Price Plan), announce the receiving station prices or the price to the farmer in the 201 to 210-mile zone from Philadelphia for 3% milk is \$2.19. In the 101 to 110 mile-zone, the price is \$2.29.

BUTTER PRICES STILL DOWN

Butter prices are still in the same neighborhood that they were last week. Some members of the trade believe that prices have reached bottom, others are non-committal. Beyond that we can say nothing relative to the general trend. Some houses report active buying. New York experienced some rough weather during the week ending the 24th, and trucking was most difficult. Undoubtedly buyers are getting low in stock and this accounts for the greater activity. Fresh stocks are moving freely at current prices. At the same time arrivals are apparently just as free. Stor-

age stocks are still burdensome. On the whole, the tone of the market seems to be fairly steady on fancy table grades. Lower quality is still meeting a weak market and more or less uniform conditions. Buyers are having no trouble procuring 92 score butter at 38c, while marks scoring higher than these extras are bringing 38½c and sometimes 39c. Butter scoring 90 to 91 is worth a cent under 92 score, and so on down to the lower grades, which are worth around 33c.

CHEESE MAINTAINS FIRMNESS

The firmness in the cheese market continues. Prices are about par with those of last week. Some houses report an increased activity, but this has not been reflected in prices, 25½c to 25c representing the market for fancy held flats. Average run held goods are worth from 24c to 25c. The Chicago market is slightly higher than the New York market. There is little or no fresh cheese entering the trade. Most of the call is for fancy well cured cheese.

FANCY EGGS SCARCER

The weakening tendency in the egg market more or less in evidence last week was checked before it got very far by the fact that arrivals have eased off. Undoubtedly weather conditions are affecting production. As yet the turn in the market has not been responsible for a change in prices to any great extent. Some fancy marks have advanced one or two cents, so that eggs have got to be extremely fancy to bring 70c. Difficulty in clearing accumulations was more or less responsible for the weakening conditions a week ago, but with lighter arrivals this difficulty has been eliminated, so that now it is merely a case of the price following the market. The condition of the egg trade at the present time is such that accumulations of fancy degree will quickly affect prices. This does not mean that the market is weak, but prices are about as high as consumers will readily pay.

Fancy brown eggs are still meeting a very strong market and quotations in general are on a parity with the fancy henry whites, bringing from 68c to 70c, depending on the pack. Nearby henry whites are bringing anywhere from 60c to 70c, depending on grade and pack. Gathered whites, grading firsts to extra firsts, are worth anywhere from 63c to 66c. Pullets are bringing from 56c to 61c.

LIVE POULTRY MARKET FIRM

Live poultry market has taken on a decidedly firm tone, much in contrast to the report of last week. The poultry market has been mighty erratic of late. As we said last week, the embargo threw everything off its feet, and like a youngster on ice skates, has had a hard job to steady itself ever since. This recent change has been primarily due to light receipts. The available supply of poultry is comparatively light and naturally the market is ruling quite strong. Fowls coming in by express are meeting a firm trade, and while most of the receipts are working out at the freight market, which is 32c, there are some fancy selected hens which are bringing a cent or two premium. Express chickens are selling over a wide range, indicating that there is a considerable variance in quality of these arrivals. On the whole, all chickens are arriving well and anything that is fancy is in strong demand.

POTATOES SLIGHTLY FIRMER

There seems to be a slightly firmer tone to the potato market, and if opinions of men in the trade are of any value it looks as though the potato market is going to be fairly good for the next week or so. As yet country prices are above a parity with prices in the city. States are being held for \$1.25 to \$1.30 per cwt. in bulk delivered in New York City, while prices in 150 pound sacks vary from \$2.15 to \$2.25 delivered. This is slightly higher than the New York market. Advices state that shippers are now paying 50c a bushel at the car, which is higher than the average this fall. Most caring has been done at 35 to 40c.

Maine potatoes are also held a little bit higher than the New York market. Bulk shipments are quoted at \$1.35 to \$1.40 per hundred delivered in New York, while sacked goods are held at \$2.35 to \$2.40. There has not been a great deal of loading going on in Maine of late. Temperatures have been down to about 50 below zero and this cold snap has held up loading. Reports from various quarters do not give us more encouragement as far as real high prices are concerned. Stocks on hand all through the country are ample to take care of the trade needs. There will be no shortage of potatoes this spring. In fact in some quarters there is a strong feeling that we are going to see prices weaken perceptibly. As we have said in these columns before, any price changes that are at all reasonable should be taken advantage of, for as soon as the market takes a jump shipments are bound to be heavy enough to curtail any sustained increase. Furthermore, it is going to be to the advantage of potato growers and shippers to keep stocks moving. Any big flood into the various big markets at the present time would most assuredly put a damper on the talk of better prices. In fact a price decrease would not be unexpected.

BEAN PRICES ADVANCE

The bean market not only continues its firm condition, but has advanced rather sharply in the last few days. The condition of late is much improved and the steady, firm feeling prevails on most of the leading varieties. The bean market this winter is quite a contrast to last year's. At that time a dull tone prevailed week in and week out. In fact early this season the bean market was nothing more than dull and inactive. The market was acting cautious in view of the experience of last year. Perhaps recent reports on the bean situation have had something to do with the condition in the market. Those who are supposed to know the facts say that fully three-fourths of the bean crop has moved into market, leaving one-fourth of the crop in the country. Three-fourths of the consuming season is still ahead of us. As a result of the upward turn in the market pea beans have advanced to \$7 and \$7.25 for common and fair stock. Choice hand picked pea beans are worth \$7.50. A week ago the best of them were worth \$6.50. Red kidneys have advanced sharply and \$10 is the price for common stock, whereas choice marks are worth \$10.50. This is almost \$1 higher per one hundred than last week's price. Marrows show no improvement over last week, prices being just the same. White kidneys are a little better, especially on common grades. Fancies are still at the same price of \$9.50, while common goods are worth \$9; 25c better than a week ago.

HAY MARKET WEAK

The hay market has slumped off during the past few days. The storm that struck the metropolitan district on the 20th knocked trucking completely off its feet. Inasmuch as hay requires heavy trucking, buyers will not undertake any moving operations under present circumstances. Traffic is having extremely hard going on the glassy streets of the city, consequently the hay market has turned weak in face of liberal arrivals. Fancy timothy is worth \$26 in large or small bales, but No. 2 hay is only worth from \$23 to \$24; while No. 3 is down to \$23 and \$22. No. 1 second cutting alfalfa is worth from \$30 to \$31; while No. 2 is bringing \$25 to \$26.

CASH GRAINS UP AGAIN

New York cash grain prices, FOB, are as follows: WHEAT, No. 2 hard winter, \$2.03½; No. 2 red, \$2.18½; No. 2 mixed durum, \$2.04½. CORN, No. 2 yellow, \$1.50¾; No. 2 mixed, \$1.49½. OATS, fancy white clipped, 75c to 76½c; ordinary white clipped, 70½c to 72½; RYE, \$1.71¾.

Chicago cash prices are as follows: WHEAT, No. 2 hard, \$1.89½ to \$1.90¾. CORN, No. 2 yellow, \$1.32; No. 2 white, \$1.31½. OATS, No. 2 white, 61c to 61½c. RYE, \$1.60.

CABBAGE BARELY STEADY

The cabbage market is barely steady. In some quarters it is holding its own. Conditions are dull in general. The trade will not take hold and buy freely, only taking on enough to supply current needs. Quotations are in the neighborhood of \$19 and \$20 FOB loading point.

Night Driving Made Safe

Save Your Life!

Prevent

That Smash-up!

Kill the bright lights of the car coming to you— not a spotlight—does not blind the man coming toward you. No Automobile owner can afford to drive one night without the Ideal Rode-Lite. It makes night driving safe and a pleasure. Equipped with the Ideal, there is no danger or risk of running into the ditch, hitting pedestrians, telegraph poles, trees or rocks as your side of the road is brilliantly illuminated at all times and not a particle of glare from the on-coming car or to the on-coming car. The Ideal Rode-Lite is the best Accident Insurance you can buy.

E. H. Finch Company,
1476 Broadway,
New York City.

Looking After the Hens in Winter

By A FARM WOMAN.

I FIND the work of attending the poultry in winter is not always pleasant, but it is a sure way of getting me out of doors. Like everything else, it is a habit, and being so, must be done, no matter what the weather is like. It is often recommended to women that a daily walk is a splendid thing for the health. I take mine running out and in to the henhouse.

As the light begins to show in the East I am out with a pail of water and rinse out and fill the water dishes, roll up the screens in front of roosts, and open the cotton screens if the weather is at all decent. Scatter the scratch grain ration in the litter. Then with my rake (an old manure fork with the prongs bent like a potato hack) I rake forward the litter. Once, sometimes twice a week, I get up a little earlier and with the help of one of the boys I change the floor litter. Often we have it all finished before many of the hens have left the roosts, and so there is no fuss of flying feathers.

The pigs always get this floor litter and seem to get much pleasure out of it. Bits of bones, charcoal, grains, vegetables. It seems to keep them busy for a while. With the help of a big sheet we are finished in a few minutes and have the fresh straw in. We are using barley straw and chaff at present. It makes a good floor litter.

Sees the Beauty of the Morning

With the floor all in order I now get my trusty shovel, a broad one with a very short handle and clean off the dropping boards. I always shovel some of the floor dust and straw on them and as they are wide they provide an extra scratching place for timid fowls.

I then carry the full pails to the manure shed, and on the way I look at the rosy sky or the gray clouds or the snow-laden trees, or perhaps it may be one of those beautiful hoar frost mornings when everything is transformed to loveliness. No two mornings are exactly alike, always there is something different. I wouldn't miss my little morning walk for anything, and breakfast is eaten with keen enjoyment.

On very cold mornings I like to give the hens something they like to put spirit into them, perhaps a dish of thick curd or a piece of meat. It helps to rouse them up.

Good Variety in the Ration

About 10 A. M. the water dishes are refilled and the hens get their green ration, mangels, cabbage or turnip. In days when these would freeze quickly on their nails on the walls, I have a chopping stone and hammer and I chop them fine on that and they eat it up at once. I use this also for the bones of rabbits, or, indeed, any bones I may have. The boys snare rabbits and I use them solely as a meat ration and the hens like them boiled. Two rabbits a day seems to be enough for 150 hens with the addition of milk.

At noon they get a hot mash of cornmeal scalded with the water the rabbits have been boiled in and any vegetable water I do not need and sometimes a few potatoes, the mixture being mixed to a crumbly state with bran and middlings. I change the quantity of this mash, as hens will need more of it when they in full laying trim.

The water is again attended to, eggs gathered, and they are left till between three and four in the afternoon, when the grain ration for the evening is raked in. The various hoppers are attended to, if they need refilling with grit, oyster shell or dry mash. I do not allow any dry mash to the yearling hens, only to the pullet pens and even these do not get it all

the time. As they seem lazy I shut it up for a day or two.

Just Like "Putting Them to Bed"

The eggs are again gathered and with the evening shades I see that all hens are on the roosts, and the curtain let down in front, water dishes emptied, and everything closed up for the night. I suppose if I were lucky enough to have electric lights I'd be toddling out in the dark attending to them, but at present their work and mine in connection with them, only lasts from sunup to sundown. If any farm woman is feeling sick, is pale of face and feels that life in the country is lonely and dreary, let me recommend her to try what taking care of the hens as I do it will do towards giving her a fresh interest in life.

—MRS. T. THOMSON.

Purebred Versus Mongrel Flocks

THE time of year is approaching when preparations are being made on most farms for the renewal of the farm poultry, either by hatching chicks in incubators or by natural methods, or through the purchase of baby chicks. Some farmers will be debating in their minds whether to continue with the kind of chickens they have, or whether to make a change. In those cases where the flocks are purebred, it will make no material difference whether a change is made—it will be largely a matter of personal preference. Where the flock is of mixed breeds, however, it will make a world of difference.

A few weeks ago I made a trip by car through parts of three states and, as I was not doing the driving, I had a fine opportunity to note the poultry flocks on the farms that were passed. I was astounded

RATIN

Killing Mice the World Over

RATIN is endorsed by the New York Zoological Park, five European Governments and thousands of users throughout the world as sure-death to vermin.

Exterminates mice by a disease wholly harmless to persons, domestic animals, pets and poultry. Easily and economically used. Simply soak bread with RATIN. Once caught, the RATIN disease is easily communicated from mouse to mouse.

85 Gram Bottle Only \$1.25

Sent to you C. O. D. or for money order or check. Further particulars supplied by free circular "How to Exterminate Rats and Field Mice."

at the number of mixed-breeds, mongrel flocks still to be seen on farms today. It would appear that many farmers are not aware that a decidedly larger income and net profit can be derived from a pure-bred flock than from a mongrel flock of no particular breed.

"The Proof of the Pudding"

In proving my case, I can do no better than to cite the experience of a young farmer I know of. Up to five years ago, he had a mixed flock on his farm of fifty acres. He knew there was money in poultry, but he also realized that he was not getting the profit he should have. He decided to make a change, and promptly discarded the mongrels for a flock of pure-bred White Leghorns, of a good laying strain. It did not take him long to learn that he had done the right thing—and his only regret now is that he ever started out with mongrels.

From very early in the spring, through to the end of the hatching season, he gets a premium of 15 to 20 cents per dozen from a nearby hatchery for all the eggs he cares to sell, or has to spare. In a cave he has three incubators with a total capacity of 1,000 eggs and, after hatching chicks for his own requirements, they are kept busy throughout the season hatching chicks to be sold to his neighbors. He derives a nice profit in this way and he has never yet been able to supply the demand. All of this is a source of profit that is lost to the farmer who has a mongrel flock.

The Market Wants Uniform Eggs

In the winter he ships his eggs to the eastern markets, where they obtain the highest market prices, because of uniformity of color, size and shape. The eggs are graded before being crated, of course. But this, too, is a source of profit that is lost to the farmer who has a mongrel flock, because with the latter there is no such thing as uniformity of color, size or shape of eggs. In fact, the only profit that can be derived from the mongrel flock is through the sale of eggs at local market prices, and the sale of fowls, also at market prices. The farmer who has purebreds has the further advantage of being able to sell some of his birds at very good prices for breeding purposes.

There really is not a single good reason why every farm poultry flock in the country should not be purebreds. The cost of a few good birds with which to start a flock is never prohibitive, and the money so invested will pay mighty good dividends.—W. C. MULLENBURG.

Buying Baby Chicks Cheapest

HATCHING has become very much of a specialized business and the large hatcheries built with that end in view are able to hatch so many more chicks from the number of eggs set, partially because of the conditions provided and partly because they take special care to set eggs of high fertility and from flocks with strong vitality. Because of this and the competition in hatching, the price of baby chicks of good standard breeds are to be had at prices that seems to be cheaper for the long run than in buying incubators and setting them. Very few set incubators and get more than an average of fifty per cent hatch, while baby chicks can be purchased for double the price of hatching eggs of almost any strain. This would mean that all the trouble of hatching at home would be lost, and as poor hatching means weakened vitality, as well it means more than that.—L. H. COBB.

Is A Home-Made Electric Incubator Practical?

I would like to know if it would be practical to heat 8 400-egg size hot water incubators with a farm lighting plant. What size plant is required and how would the cost of the operation compare with coal?

WE are afraid this proposition is not feasible. It would be necessary to install an electric coil for heat purposes in the incubator, and the plant could not properly heat the coil. Without being technical it amounts to this: a coil sets up a high resistance and practically all of the electricity would be used before he got any heat. As an illustration of my point, a 600 Watt farm lighting plant is capable of heating one electric flat-iron fairly well, but it would be a big drain on a storage battery. A coil for an incubator of 400 eggs would be larger, and you therefore see how impractical the proposition is. The use of electric lights as a source of heat could probably be worked out as there are such machines on the market. We can see no harm in the idea but it would require a good deal of experimenting to determine the number of lights to be used, the amount of heat required, etc. Whether the electric light is practical goes back to a purely expense proposition. We cannot tell how much it costs to operate the particular plant in this case. By way of comparison coal oil of a high grade ought not to cost, for a 400 egg incubator, more than 5 to 8 cents a day, depending upon the temperature of the room in which the machine stands, the height of flame in the lamp and the condition of the wick.

Ohio Accredited Chicks

Produced under Supervision of Men Trained by Poultry Department, Ohio State University

R. E. FADER

When the Poultry Department of Ohio State University agreed to train and authorize men as inspectors for the Accrediting of hatcheries which come up to their standard, Mr. R. E. Fader of Norwalk Chick Hatchery immediately put his flock under such supervision. He is hatching and selling nothing but Accredited chicks. Mr. Fader has been in the poultry business 22 years and has an unusual record for success in his line of work. His flocks are carefully bred and the chicks he produces are healthy and strong.

He is offering chicks from eight breeds at a fair price. The public can buy chicks from the Norwalk Chick Hatchery and feel sure that they will get honest and square treatment. Mr. Fader will send a fine illustrated catalog on request, if he is addressed at the

The Trouble Maker—By E. R. Eastman

CHAPTER XVIII

WHEN Bradley opened the rear door of the hall a few minutes later, walked through the little alleyway back of the stage and stepped out on the platform, he looked into the faces of over fifteen hundred men. Every chair was filled, and the gallery was packed to capacity, while a standing crowd lined all the space in the aisles on both sides and at the rear. So still was the crowd that the house might have been empty. Nor did the county agent receive any greeting when he entered. The men were there for information, and they purposed wasting no time in getting it.

Bradley sensed their attitude, and plunged quickly into the reports of the progress of the milk war that he had received that day from both within the county and from the Dairymen's League headquarters in New York. The crowd listened silently and grimly to what he had to say.

"You see, men, there's no doubt of it this time," he concluded. "We're getting stronger every day. Less and less milk is being delivered. The farmers are at last really going through with it."

A man jumped to his feet.

"You bet we're goin' through with it," he shouted. "But what about Jim Taylor?"

Before Bradley could answer, a dozen men were on their feet at once.

"Yes," they roared. "What about Taylor? Why is he in jail?"

Bradley held up a hand.

"Just a moment, men," he shouted. But no one heard him.

"We want Taylor!" they shouted. "We want Taylor!"

"Where's Taylor?"

"What about Taylor?"

Almost panic-stricken, the county agent saw that the crowd was beyond his control, when a tall, thin man arose from a chair somewhere in the rear of the room and came unhurriedly down the aisle. His black swallow-tailed coat and long hawk face made him seem taller and thinner than he was. One long arm was folded carelessly across his back. In the other hand, swung a tall silk hat. He was smiling, and when he smiled, you liked him. The man was John Winslow, the lawyer, known and liked and laughed with from one end of the county to the other.

"Just a word, boys," he said. He raised neither his voice nor his hand, but they gave him their almost instant attention.

"Today, Jim Taylor did me the honor to ask me to help him out of his little difficulty," he said simply. "He's a good boy, and has done nothing that any man would not be proud to do."

The crowd relaxed. Some started to clap, but stopped fearing to lose anything the lawyer said.

"Yes," continued Winslow, "Jim doesn't need any help, nor does he need your help for himself personally. But all the same I'm glad you're here. There isn't any nonsense about the farmers being the backbone of the nation, and I'm glad to see that backbone stiffen up a bit."

He paused a moment, reached a hand behind him inside of his coat, while the crowd held its breath, wondering what next. Then from the pocket, Winslow slowly pulled a very large silk handkerchief. The crowd relaxed, while the speaker deliberately removed and wiped his glasses, put them back on and returned the handkerchief to his pocket.

"Milk business has been bad a long time. hasn't it? Glad you're fighting it out. Stick to it."

Then there was another pause. The smile faded slowly from the lawyer's face. Suddenly a long arm came up with a swing past his head and then down with index finger seeming to point toward and accuse every man in the room.

"But the milk business is not the only

thing that needs attention in this county, or in this country. If you get this organization of your's together, keep the politics and the politicians out of it."

He stopped again while the low spoken words seemed still to be ringing like shouts in their ears. What did he mean? What did all this have to do with the milk business? How would it connect with Jim Taylor?

The speaker went on.

"As soon as young Jim got into the calaboose today he sent for me. Said he wasn't guilty. Didn't need to tell me that. I knew it 'fore he told me. Known Jim ever since he was a little fellow, and I know he won't lie. Anyway, guilty or not guilty, he is entitled to bail, and so I went up to Judge Rising's house to make an appeal; asked for an immediate hearing, so Jim could go home tonight to do his chores, and to his little sister, and to his sick mother." The lawyer paused a moment and concluded: "And men, Rising wouldn't let me have it!"

Again the speaker seemed to swing off

dealers, and to certain dealers only; and those dealers in their turn shipped to certain wholesalers and to those only. Business men expanded their business, or they did not expand it, depending upon their stand with the "boss" and with their willingness to share their profits with him.

There had been protests, of course, but when the men who had made them faced stark ruin shortly after, the protests, except in secret, ceased.

Once and once only in all that twenty years had a man defied the boss and gotten away with it. Dave Messenger, a mild little man, had drifted into Speedtown one day from somewhere in the West.

"I've been doin' quite considerable travelin' for the last few years," he had stated, "and now I'm lookin' for some place where I can settle down and get a little rest and peace."

After he had been around a year or so, Dave had made it known that he wanted to become sheriff. Judge Rising, the "boss," at first had laughed at Dave's ambition, but to the astonishment of every

What Has Happened So Far

IN SPITE of his love of peace, Dave Messenger, sheriff of Speedtown, outfaces the angry mob bent on freeing Jim Taylor from jail and sends them away to the town hall, where a protest meeting is going on. Jim is unjustly held, the judge who is a local "boss" having refused bail. Thus the milk strike has embroiled all the surrounding country, splitting farmers into factions. Among those who oppose the strike is old Johnny Ball, Jim's neighbor and father of Dorothy, his childhood sweetheart. Because Johnny Ball's milk was dumped by a band of over-enthusiastic strikers, the old man has had Jim arrested. A lawyer named Winslow is appointed to defend the young farmer and promises some political housecleaning as well.

on another subject. At first the crowd could not get what he was driving at.

"Mark Anthony said that Brutus and Cassius and that bunch that betrayed Caesar and the Roman government were honorable men. Gentlemen, not all of that kind of 'honorable men' died with Cassius! Every age has some of the same species, and sometimes I think we of this age have a little more than our share."

Again the smile left the speaker's face. Again came that sudden gesture of swinging long arm and accusing finger.

"It's all right to clean up the milk business, but I want to tell you that the milk business or no other business will be right until you clean up the politicians in this county government."

He paused again. The silence in the room was oppressive. His audience no longer wondered what Winslow was driving at. He had mentioned no names, but every man in the room knew whom he meant.

It was notorious that county Judge Rising had for more than twenty years bossed and ruled and ruined the county government for the single purpose of selfish gain and aggrandizement for himself and his friends.

FOR more than twenty years, elections in that county had been a foregone conclusion. Candidates were elected if Judge Rising said so; if not, there was no use running. With few exceptions, every office was filled by his satellites. He placed his man in the legislature, and he controlled the congressman from this district. Justice in his own court was a travesty.

Not satisfied with political office, his influence extended like a pestilence into the commercial business of the county and into all that part of the state. Nothing was too big or too little for his attention. His dirty fingers were in every pie. You got money at the banks if Rising's gang thought you ought to have it; if not, you did not get it. Mortgages were foreclosed when the "big chief" said so. Farmers sold their products to certain

one in the county, Messenger had been nominated, and as nomination meant election, he had become high sheriff of the county. No one but Messenger ever knew how it had been done, he had never told.

John Winslow, a lawyer, had been astonished with the rest that Messenger had apparently been approved for the nomination by Rising. Being on friendly terms with Messenger, he had asked him one day how it had been done.

"Easy enough," drawled Dave, with a curious hard gleam in his eye. "I just had a little talk with him, that was all. May have more to tell you some other time."

The lawyer had to be content with that, but he had remembered that after that time the judge appeared to have an uneasy and furtive manner whenever he was in the presence of the little sheriff.

But with this exception, Rising had gone his high handed bullying way until the night of this meeting.

"No need of my reviewing the political situation in this county," Winslow continued. "Every man here knows what it has done and what it is doing. You know, too, who is responsible for it. All of us have had a taste of its workings right here today with young Taylor. You may win this milk fight—I hope to high heaven that you do—but unless you clean up this other business at the same time, you'll face just about the same old situation."

"You came over here tonight to get Jim Taylor out of jail. All right. I'm with you. Let's do just that. Furthermore, I'll tell you how to do it."

He paused a moment, pulled his handkerchief from his pocket, blew his nose with a snort, which at any other time would have caused a smile, put his handkerchief back, and raised that long arm.

"Old Judge Rising is a coward!" he said.

Bradley, sitting on the platform, heard the men suddenly draw in their breath. In that county, no man had ever been strong enough, or had courage enough to stand up publicly and denounce one of the most powerful politicians in the state. Could any man do it now and still stay in the county?

"Yes, sir," repeated the tall lawyer, "Rising is a bully, and all bullies are cowards. Tonight I'll prove it to you. My plan is very simple. If you men will go with me up to the honorable judge's house, and will delegate me as your spokesman, I predict that we'll be able to go from there to the jail, release young Taylor, and take him—"

With a whoop Greene and a half dozen young farmers jumped to their feet and shouted, "Let's go!"

"Stop!" said the lawyer, and bit off the word with such explosive force that it sounded like a report of a pistol.

They stopped, and sank back into their seats. Winslow waited for quiet.

"Now get this, and get it straight," he said, pointing his finger at Greene. "Men like you are the real trouble makers. You're always going off half-cocked. You've made trouble enough for one day, and I'm telling you to keep your nose out of this business for the rest of the evening, or I know a thing or two that will get you into some trouble."

Then, speaking to the audience generally, and smiling again, "If you men don't like what I propose, say so now, and no harm is done. If you do like it, then it must be done as I say, or not at all. Do you agree?"

"Sure," they shouted. "You're all right. What shall we do?"

"I want a committee of eight or ten men, good farmer men selected from different parts of the county. Nominations are in order!"

The crowd was ready for action. They had been longing for it the whole evening. Eight men were nominated and elected without delay.

"Now," said Winslow, "these eight men and I are going up to see the judge, and you all are going along. Naturally, as you cannot all crowd into his house, you will wait outside on the street while your committee and I will go in and have a little conversation with the judge. That's about all there is to the plan."

"Oh, just one thing more. I am depending upon you to see that there is to be no rowdiness, and no shouting. This is to be just a demonstration of American citizens in the interest of justice."

He asked the eight men who had been elected to take their places at the entrance of the hall. Then with silk hat in one hand, with the other folded carelessly across his back, he went unhurriedly down the aisle and joined them.

Fifteen hundred men got quietly up from their seats, and in orderly fashion followed his lead into Canal Street, across Water, up Whig, until they came after a time to Judge Rising's residence.

Winslow went up the broad steps of the porch, followed by his committee, who stood silently while he knocked. After a time, a servant opened the door a few inches.

"Kindly tell the judge that Mr. Winslow and some other gentlemen wish to speak with him."

"The judge has given orders that he cannot see anyone tonight," said the woman, and started to shut the door.

But the lawyer's foot was already in the crack and he pushed it gently open, and stepped in, followed by his men.

"Now, please go and tell the judge what I said."

The woman looked at him, turned and went. Winslow pulled the portieres leading from the hall into the library aside and led the men in to wait the coming of the boss.

After a few seconds, Rising stood in the door. He was a big man. Once he had been a powerful one, but over-eating and lack of exercise had softened him. His stomach protruded, his thick neck covered with coarse bristling hair, rolled over his collar on the sides, and extended straight

Paint Without Oil

Remarkable Discovery That Cuts Down the Cost of Paint Seventy-Five Per Cent.

A Free Trial Package is Mailed to Everyone Who Writes

A. L. Rice, a prominent manufacturer of Adams, N. Y., discovered a process of making a new kind of paint without the use of oil. He named it Powderpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather proof, fire proof, sanitary and durable for outside or inside painting. It is the cement principle applied to paint. It adheres to any surface, wood, stone or brick, spreads and looks like oil paint and costs about one-fourth as much.

Write to A. L. Rice, Inc., Manufacturers, 134 North St., Adams, N. Y., and a trial package will be mailed to you, also color card and full information showing you how you can save a good many dollars. Write today.

GIVEN YOUR CHOICE
Latest Style jeweled wrist watches, guaranteed time keepers. Given for selling our large packets vegetable seeds, 10c each according to our plan. Send for 40 pkts. today. Easily Sold. Earn big money or gifts. **AMERICAN SEED CO.** Box C-19 Lancaster, Pa.

PATENTS

Write for my free Guide Books "How to Obtain a Patent" and "Invention and Industry" and "Record of Inventions" blank before disclosing inventions. Your choice of 100 valuable premiums, or 50% cash commission, for selling 45 packets of my "sure-to-grow" seeds at 10c each. Big-value premiums, some nationally known. Write for 45 packets and high FREE catalog. **KUHNS, the Seed Man** Eastern Seed Co., Dept. D-1, Lancaster, Pa.

When writing to advertisers, be sure to mention the American Agriculturist

The Trouble Maker

(Continued from Page 107)

upward in the back, so that it was impossible to tell where neck ceased and head began. Small round black eyes, set closely together, gleamed from a heavy arrogant face, coarsened by a thick nose and a sensual mouth.

"What does this mean?" he said to Winslow. "Who are these fellows?"

"This is just a little business call," said Winslow mildly, "and these are farmer friends of mine, who wanted to see you a minute, and invited me to come along."

"This is an outrage!" growled the judge. "I warn you, Winslow, that I'm in no mood for fooling. I won't stand for any nonsense. I've had my eye on you lately, and I don't like your attitude. Now what do you want, breaking into a man's home?"

"There's no nonsense tonight, judge, and we'll get right down to brass tacks. These gentlemen are here to ask you to release Jim Taylor from the jail tonight on my recognizance."

The judge's face was already red with anger. Now it seemed to the men to turn purple in the lamplight. The heavy veins on both sides of his neck beat like a pulse. For a moment after Winslow's speech, he was inarticulate with rage.

Then he roared. "Winslow, I told you once today that Taylor would stay in jail until I got to his case. Now I'll tell you again, he'll stay there until I see fit to release him."

Then drawing himself up pompously, "No one gets any special favors out of me."

He stepped up closer to the lawyer, and shaking a pudgy finger in his face, said to him:

"Moreover, Winslow, you're done in this town. Not only that, but I swear I'll have you indicted, and all the rest of you,"

turning to include all of the men. "You'll find this is a mighty sorry night for you when you come here and attempt to pervert justice. Now get out of my house!" and he started toward them.

They made no attempt to move.

"Just a minute, judge. Not so fast," came Winslow's unruffled voice. "You are a lawyer, and, therefore, you will undoubtedly recall the statement of a famous jurist who said that you cannot indict a whole community. To be sure, you may indict my friends here and me, but come here a minute."

Winslow went over to the window and raised the curtain.

"Come here," he repeated.

Something in his words or his manner pulled the judge toward the window. Outside, as far as the eye could see, the flickering lights showed the street jammed with silent waiting men. The men in the room were perfectly quiet while the judge looked at the crowd and took in its significance.

Then Winslow said softly:

"I repeat, judge, you might indict us here in this room, although I don't know what for, but it would be something of a job to indict all that bunch, for blamed near the whole county is out there tonight, upwards of two thousand voting citizens."

The judge made no reply, but stood looking at the crowd a moment longer before turning back into the room. He tried to maintain his bluster, but the men noticed that his voice had grown husky and red face had changed to a sickly pallor.

"Winslow, once more I ask. What do these men want? What is the meaning of this outrage?"

"I've already told you, judge. We want an order from you releasing Jim Taylor

American Agriculturist, January 31, 1925 from jail tonight."

The tall lawyer suddenly stopped smiling. The hawk face showed thin and stern in the lamplight. With a swing of his arm and a step forward, he brought a long finger down to within an inch of the other man's face.

"And this 'outrage' means, Rising, that you and your gang are forever done in this county! Get that! You're done! Now write that order, and write it now! We're in a hurry."

(To Be Continued)

Things Worth Knowing

IN refinishing a small cherry-wood table which was an antique and a valued heirloom, many dents in the surface had to be removed. We smoothed them down with glass and sand paper. For the deeper ones, a piece of coarse blotting paper was soaked in water and laid upon the dents and a very hot flat iron was set on the blotter. Every dent finally disappeared. After scraping, sandpapering, waxing and polishing, the beautiful grain of the table top was again brought out and its luster restored.—Z. I. Dahvice.

* * *

A hammer head can be kept on the handle snugly and permanently by dipping the end of the handle in glycerine to wet thoroughly the surfaces where the head touches. Also dip the wedge in glycerine and then drive it home. The glycerine absorbs the moisture from the air and transfers it to the wood, which will swell out and grip the head securely.

* * *

Vinegar is the best substance for cleaning the mica panels of stove doors, and mixed with salt, for cleaning copper surfaces.

* * *

Pure glycerine will remove coffee and tea stains on silks and woolen. Ether is also good for cleaning paint from dresses.

* * *

White lead and sperm oil, mixed together with just enough graphite to give it a dark color, makes a good lubricant for lathe centers. This grease can be kept in a tin box and oil added when necessary to keep it from becoming too thick.

* * *

To work paint from a brush, rub the brush over one-half inch wire mesh, stretched and nailed over the open top of a box. This makes a handy accessory that every painter will appreciate. Brushes used for dusting, and cleaning can also be rubbed over this fixture.

Rooms Of Our Forefathers Live Again

(Continued from Page 95)

tail which went into the main room of a fine residence of the period.

The furniture is chiefly of mahogany, replacing the earlier oak and walnut. The earliest clock of domestic manufacture is in this gallery, which also boasts a finely carved English chandelier. Plaster figures and busts, imported and American-made silver, three Copley portraits and a group of early American miniatures are among the interesting decorations.

The Rooms Are Handsomely Furnished

Perhaps the most attractive corner of the floor is the alcove with a mantlepiece from Gadsby's Tavern, Alexandria, Va. Upon this very mantelpiece Gen-

Powell, a much-traveled and wealthy patron of art who served as mayor of Philadelphia from 1770 to 1780.

The Third Period

In the furniture decorations of the Third Period—the early republic of 1825—the influence of European fashions is again tempered into simpler but none the less beautiful American interpretation. In Italy, the excavations at Herculaneum and Pompeii had turned the minds of the designers from the fantastic forms into which they had drifted back to the simplicity of classical models. A young Scotch architect, Robert Adam, returned from Italy to introduce in England the new style of classic decoration which extended into every branch of house building and furnishing. In ten years there was a complete revolution in taste, and in spite of the strained relations between the mother country and her former colonies, the classic revival spread rapidly in America.

Delicacy and refinement marked the decorations on the exterior of new houses and their contents as well. New pieces of furniture made their appearance, among them the sideboard. The beautiful lines of Heppelwhite and Sheraton furniture were eagerly adopted by American cabinet-makers.

But to the English designs were added features which made the furniture

typically American. Most popular of all decorative motifs was the American eagle which appeared not only on the facades of buildings, but also as inlay on tables, desks, clocks and picture frames, as gilt ornaments on mirrors, and even in such articles as fireplace fenders. Intense patriotic fervor was reflected in the frequent decorative use of the eagle, the stars, Washington's portrait, symbolic figures.

The exhibition gallery contains beautiful examples of the work of Duncan Phyfe, the master-cabinet maker of American furniture history. Girandole and convex mirrors, usually surmounted by the eagle, are noticeable and the silver, glass and porcelains of home or oriental manufacture are arranged to set off the delicacy of the period furniture.

An alcove presents a typical New England 19th century interior with delicate mouldings, a printed sepia wall paper in a romantic Italian design and a purely American clock, later to be known as the "banjo" style.

In the third period there was much demand for furniture of light woods, such as curly maple and satinwood. Mahogany was often finished in a light tone, especially when inlaid with lighter woods. In the armchair of the picture, the influence of Heppelwhite, another leading English designer, is plainly seen in the spade-footed legs, the shield-shaped chair back and the carved decoration—all features which Sheraton rarely if ever used.

eral Washington himself leaned his elbow many times and in the room from which it came often met his friends over a chafing dish of canvas-back ducks and a bottle of Madeira. The painted English wallpaper, carefully removed from the old wall is gaudily colored in greens, blues, pinks, and yellow—a very popular type of wall hanging in those days.

Alexandria also furnished the great Assembly Room, taken from the old City Tavern. Here, too, General Washington was wont to visit, for here were held the "Birth Night Balls" in his honor every year. A few days before his death he wrote the hosts in reply to their invitations, "Alas! our dancing days are no more. We wish, however, all those who relish so agreeable and innocent an amusement all the pleasure the season will afford them." Washington "looked with the most kind and favoring eye upon the rational and elegant pleasures of life," we are told by one who also chronicles that he was conspicuous for his own graceful dancing. Gilbert Stuart's portraits adorn this impressive and beautiful room.

From Marmion, an old Virginia estate, comes an ornate room with a diagonally set mantel, elaborate painted decorations and furniture that shows the full Chippendale influence. This influence is also seen in the beautiful Philadelphia room, one of the most perfect interiors produced in the colonies. Chinese wall paper, a portrait of Pitt, the friend of American Liberty, and beautiful cut-glass lustre for sperm-candle makes this sumptuous room the climax of the entire floor. It was taken from the home of Samuel

Pattern Service

TO order AMERICAN AGRICULTURIST patterns, write your name, address, pattern numbers and sizes clearly, enclose the right amount in stamps or coin (stamps are safer; we are not responsible for lost coins) and send to Pattern Department, AMERICAN AGRICULTURIST, 461 Fourth Ave., New York City.

No. 1942 is an apron with many desirable features. It is easy to get into, yet completely covers the dress and fastens firmly in the back. It cuts in sizes 36, 40, 44 and 48 inches bust measure. Size 36 takes 2 3/4 yards of 36-inch material. Pattern 12c.

No. 1655 is a one-piece apron with side fastenings. It is cut from one-piece of material—2 3/4 yards of 27 inch goods will make it nicely. Rickrack braid trimming adds a pretty touch but may of course be omitted. This apron is so cut that it fits very snugly over the shoulders. Pattern 12c. Other apron dress and children's styles are illustrated in our catalogue. Price, 10c.

A round yoke always makes a plump little girl look like a cherub and indeed is becoming to older girls too. No. 2190 may be frilly or plain, with long sleeves or short, but in either case the neck finish will make its small wearer look her very best. Cut in sizes 2, 4 and 6 years. Size 4 takes 2 1/4 yards of 36 inch material. Pattern, 12c.

A mahogany mixing table forms a companion piece to the sideboard. It also has tapering legs, straight lines and ornamentation of delicate inlay. It is an American piece of the third period but shows the dominating influence of the great British cabinet maker, Sheraton.

The Early Republic is well represented in a Baltimore room of the time of Francis Scott Key and the Star Spangled Banner. The detail is extremely refined, with furniture in light mahogany of Sheraton design (see illustration), French porcelains on the mantel, a little gilt French clock and silver plated candelabra. Next door is the most elaborate room of the floor, from Petersburg, Va., which is hung in old bright yellow satin brocade and furnished with carved and moulded pieces, a tea service of silver, and an imported plaque showing Benjamin Franklin wearing the coonskin cap which captivated France.

Two New England rooms on this floor show "grandfather" clocks, richly colored wall paper, ship pictures, patriotic designs in curtain fabrics and furniture of the type found in these seaport homes which combined New England simplicity and imported luxuries. Another Early Republic room from Philadelphia has a mantelpiece ornamented with panels showing scenes of the war of 1812, and on the wall are portraits of Washington and the naval heroes of the war.

The Famous Old Facade

No description of the American Wing would be complete without some mention of the south wall. It has a history in itself, for it is composed about the facade of the famous old Wall Street U. S. Branch Bank, erected early in the 19th century of Tuckahoe marble from Westchester County.

When the New U. S. Assay Office was built, the old stones of the facade were carefully taken down, numbered and stored for use in this wall. In the pavement of the courtyard which the facade faces are five burr-millstones all brought from old mills in Connecticut.

Not only the historic facade of the

Rooms Of Our Forefathers

(Continued from Page 95)

American Wing, but the actual existence of the building itself is due to the deep interest in all things American and the generosity of Robert W. De Forest, now president of the museum. He and Mrs. De Forest gave the building, presented and loaned valuable collections, interested others in lending heirlooms for the exhibits, and helped constantly as the plans for the three floors gradually took shape.

A tablet on the first floor states "This building devoted to the decorative arts of America from the settlement of the country to the first quarter of the nineteenth century was presented to the Metropolitan Museum of Art and the city of New York by Robert W. and Emily J. De Forest." It seems a small tribute to pay in return for a gift of

American Agriculturist, January 31, 1925
such unusual and permanent value, not only to New York but to the whole country and to succeeding generations. Probably, however, the donors of the American Wing find their most welcome thanks in the steady stream of visitors who day after day pass through

The mahogany sideboard is one of the Museum's most beautiful examples of the furniture of the third period. The delicate beauty of the decoration, combined with the classic use of straight line in design, shows the Sheraton influence. Sheraton used inlay rather than carving on case furniture and also veneered panels—details so delicate that they hardly show in a picture. The sideboard was the most important new piece to appear in this period, a combination of three side pieces formerly used.

the historic rooms and see reflected in them the lives and ideals of those who founded our country and established our government.

Home Bureau Philosophy

(Continued from Page 94)

urday, and so be ready to scold on Sunday, but if conditions are wrong in the community to which her family is exposed in its daily ventures outside her clean home, she cannot expect even to protect her own.

"Home Bureau women believe that in a democracy there is no reason why cities should have better schools than the country, better health agencies, better preaching, better recreation. They recall the history of little towns, as the poet did who wrote:

"Let not our town be large—remembering
That little Athens was the Muse's home;
That Oxford rules the heart of London still;
That Florence gave the Renaissance to Rome."

New York County Notes

(Continued from Page 102)

There is plenty of it and it is of excellent quality. Several inches of snow have fallen, and sleighing is fine on the main roads, but back on the hills the winds have piled up drifts and traveling is bad. Milk prices are a little better, but the extra feed the cows need at this time of the year leave the farmer no more profit. The potato market is dull. They are bringing 35c, if one can sell them at all. A few farmers are retailing them out here and there at 50c a bushel. Eggs are retailing at 60c to 65c. All meats have advanced in price when purchased in the markets, but not much when the farmer sells them. Good hay is being sold and delivered at \$8 to \$10 a ton. Auctions have been numerous and tools and stock have brought fair prices. Horses seem to be the thing taboed, as some good ones receive no bids. The Candor M. E. church has been willed a legacy of \$7,500 by the late Fred G. Banfield.—Mrs. C. A. B.

Ontario County.—We are having some fine winter weather. There is some sleighing. Some farmers are cutting wood. Others are hauling out manure. A good sized delegation of fruit men went to Rochester to attend the horticultural meeting there.—H.D.S.

Erie County.—Farmers are hauling logs and cutting up wood. Few if any potatoes have been sold as yet. A big gas well has been struck on the Weber Farm on Hunters Creek. They claim it is yielding 3½ million feet of gas per day. It sure is a hummer. They have been drilling in that vicinity for some time and have several other wells. Eggs are 48c a dozen, butter, 42c a pound.—Mrs. R. C.

Service Department

How to Renew the A. A. Insurance Policy

SO many of our people have written us regarding renewing the AMERICAN AGRICULTURIST Readers' Service Travelers Accident policy that we are repeating here briefly how this policy may be renewed. Our arrangement with the North American Accident Insurance Company of Chicago permits us to renew your policy on receipt of 50 cents plus 25 cents for service fee. Upon receipt of a letter from you enclosing 75 cents for this purpose, we will take care of the details of continuing it for you another year.

New policies can be obtained by taking a subscription to the AMERICAN AGRICULTURIST for five years at \$3, plus 75 cents for the accident policy, making a total of \$3.75. As we have before stated, we made a very careful investigation of the North American Accident Insurance Company before making arrangements to furnish this service to our people. The prompt way in which the company has handled its claims and business relations with us and with our subscribers has justified our faith in them.

Almost every mail brings a letter like the following—usually for a smaller amount—expressing the appreciation of some one for a timely check for a claim paid through us by the North American Accident Insurance Company:

"I received the check of \$1,000 which is the payment for my father's policy held in the North American Insurance Company.

"I am absolutely satisfied with the settlement of this claim. I also wish to thank you for your promptness."

—I. V. H., Steuben Co., N. Y.

You will be very much interested to know that during the past year of 1924 this company paid to the following subscribers of AMERICAN AGRICULTURIST the amounts opposite their names for accidents of various kinds which happened to these people. Such money always comes at a time when it is particularly needed, and therefore explains the appreciation of our subscribers for this service:

When We Handle Your Claims

THE work of the service Bureau is growing very rapidly. We have to answer hundreds of letters every week and to keep track of a large number of different cases at the same time. Very often when a subscriber asks us to handle a case, we take it up with the company against whom the claim is made, after which the company will settle with the subscriber. Then the subscriber fails to write us that the case is settled, and we have no way of knowing whether or not we should follow the case farther. May we therefore ask your very full cooperation in keeping us fully informed as to the development of complaints that we are handling for you?

Give Us All the Facts

When you write us in the first place, asking our help, may we suggest also that you set down in your first letter every detail connected with the case that you can think of. Give us all of the information. Very often before we can go ahead with your complaint we have to write back for more information, thus making more labor and holding up the final settlement. We particularly want full names, correct addresses, dates of transaction, papers, contracts, circulars, or advertisements involved, and anything else that you may have which you think will help us in handling your complaint intelligently and satisfactorily.

It is not as easy to do things by correspondence as it is to talk with you personally; therefore, we will especially appreciate your cooperation in bringing your complaint to a final settlement.

Don't Use Second Hand Filler

THE Service Bureau handles a large number of our people's claims involving difficulties in the shipment of eggs. When the returns from the commission merchant come back, deductions are often made for various shortages, including broken eggs. When we take these difficulties up with the American Railway Express Company, we find them very willing to make adjustments when the breakages are caused by their own carelessness. But when the Express Company finds that the difficulties are due to poor second hand crates and particularly to second hand fillers, used in shipping the eggs, then they refuse to pay claims. In justice, we must say that they are right in such refusal.

Poultrymen lose many thousands of dollars in the course of the year through trying to save a few cents in using packing material and fillers more than once. Here is a typical letter on this subject just received from the Express Company in answer to one of our claims:

"Your inquiry is at hand. Investigation shows that second hand fillers were used, and a reference to our files shows that this shipper's attention had previously been called to the use of improper packing material."

What Shall We Do About the League?—By E. R. Eastman

DIBBLE'S HEAVYWEIGHT OATS

It has been said that he who makes two blades of grass grow where one grew before is a public benefactor. This we have often done with our high grade seeds, coupled with intelligent culture.

In our Heavyweight Oats, we offer a variety time tried and tested, that in numerous instances has produced two bushels where one grew before. The original stock seed came to us from Wyoming several years ago and we had the product of several fields that yielded over 100 bushels per acre of grain weighing over 45 lbs. per measured bushel. The straw is stiff, strong and healthy. The grain is thin hulled and this year we have over 25,000 bushels to offer that weigh 42-45 lbs. and that have been thoroughly re-cleaned twice in our own warehouse.

Dibble's Heavyweight Oats have not only given big yields in the North West but in the Eastern States as well. On large areas in New York, 80-82-87-89 and up to 92 bushel crops have been reported to us by our customers, where the average crop is only 30 bushels to the acre.

Emil Seibert of Monroe County, says: "Outyielded our own seed this year three to

one." Reuben McDonald of New Jersey writes: "We had 700 bushels from 7½ acres." W. Rogers of Vermont reports a yield on a small acreage, of course, of over 117 bushels per acre and Frank Farber of Stark County, Ohio, states—"They yielded just twice the amount of other kinds."

We have scores of similar testimonials from many states. Now in view of these facts, why should any farmer be satisfied with ordinary oat crops of 20-30 or even 40 bushels per acre, when so many of our customers are writing us that Dibble's Heavyweight Oats give them double and in some cases, treble the average crop?

We can furnish the seed this year at \$1.00 per bushel in quantities.

To those farmers, who prefer a slightly earlier Oat and also lighter in weight, we recommend Dibble's Twentieth Century, this too is a splendid yielder with tall, stiff straw, heavy long heads carrying 34-38 pound grain.

We are Headquarters for Seed Oats, Barley, Buckwheat, Corn, Alfalfa, Clover Grass seeds and Seed Potatoes and our prices are usually lower than the same high quality can be bought for elsewhere as we ship

How Much Did Your Farm Pay You—

Or How Much Did You Lose Last Year?—A Simple Way of Telling

By V. B. HART

THE following story is told of three brothers who were farming in partnership. A friend asked each of them separately how well their farm had paid during the past year. The first said that it had paid them two thousand dollars. The second said that it had paid them a thousand dollars. The third said they had lost nearly five hundred dollars. All three knew where every dollar had come from, and where the money had gone. All were correct in their answers,—if the man who asked the question knew what each one meant. Not being a mind reader, he did not; so inquired further.

The one brother, who said that they had made two thousand dollars, meant that the farm sales were two thousand dollars greater than the cash from farm expenses. The brother who said they made one thousand dollars meant that the sales were greater than the general farm expenses—and interest, and principal paid on the mortgage—by one thousand dollars. The brother who stated that they had lost five hundred dollars meant that they had five hundred less cash on hand at the beginning of the year. During the year they had paid their living expenses, made a payment on the mortgage, and bought a tractor. Had there been fifty brothers instead of three, there might have been as many different answers. When people are speaking of profits in farming, no two are liable to mean just the same thing.

Men in different lines of work figure profits in different ways. We figure the profits of a manufacturing business in terms of interest returned on the investment. All expenses, including wages, and the salary of the manager, are paid first. If there is anything left, it is distributed to the owners of the capital invested in the business, as so much interest on their money. Two things were at work in the factory—labor and dollars. One received wages and the other interest.

A clerk working in an office figures his own personal profits by the size of his pay envelope. He would never say that he made ten per cent on his investment. His investment probably consists of his fountain pen and office coat.

Neither of these two ways of figuring profits is suited to a farm. The farmer is neither capitalist nor laborer. He is both. Take, for example, a farm business that with stock and tools is worth \$15,000. Then, suppose, that the receipts for the year from the farm were as follows: milk, \$2,100; veal, \$90; hay, \$400; potatoes, \$450, and maple syrup, \$60. This gives a total of \$3,100. Now, suppose, the cash farm expenses for the year for feed, fertilizer, taxes, labor, grass seed, threshing, silo filling, etc., amounted to \$1450. Then assume that this farmer did the way most farmers are doing, and hired no regular man, but had a son helping him for three months during the summer. If it would have cost \$150 to have hired

some one to have taken the son's place, this should be included as a farm expense. This gives us expenses, or their equivalent, of \$1,600. Here is the way the results of this farm business look:

Capital invested.....	\$15,000
Receipts	3,100
Expenses	1,600
Difference	\$ 1,500

Now, who earned this \$1,500 difference between receipts and expenses? Was it the capital invested or the labor? Was it the \$15,000 or the farmer? Both were at work for the year; so both must have helped earn it. What part did each earn? The \$15,000 could

expenses, so much the better. If not, proceed as directed to fill out the form in the middle of this page.

Figuring Up Farm Expenses.

Do not include any household or living expenses. Include under labor any unpaid family help, aside from the farmer's own time, at what it would cost to hire. Under machinery and building repairs put down the average amount spent annually for these items. Figure up the value of livestock on hand at the beginning and end of the year.

If there has been a decrease due to sales or losses put this down as an expense. Any increase should be entered under receipts. Any increase or decrease of any amount in feed and supplies on hand at the beginning and end of the year should be handled in the same way.

Do not include as an expense interest paid on a mortgage. In figuring labor income interest is deducted on the total value of the farm property. Other expenses might include machinery hired and part of cost of auto upkeep and other farm expenses.

Figuring Up Farm Receipts.

Get the total value of milk sold from your milk check stubs or statements. Estimate for any missing months. If no record has been kept of eggs sold, get this by estimating the number of dozen sold weekly for the different months. Include as crops sold all crops on hand to be sold.

After figuring up the farm expenses and receipts, fill out the summary. Under average capital, put down the average value of the farm stock, tools, and the average amount of feed and supplies on hand. Enter the total receipts and expenses and find their difference.

Then take out interest at six per cent on the average farm capital. The remainder will be your labor income.

Your farm bureau or your state college of agriculture can furnish you on request, a blank form with complete but simple directions for figuring up your farm receipts and expenses and computing your labor income for the past year. Ask for "Labor Income Record Blank." If you wish to keep a record this year of farm receipts and expenses to help you in figuring your labor income next year, ask your farm bureau, or state college of agriculture for a simple farm account book.

Note.—The New York College of Agriculture, Ithaca, N. Y., has a publication entitled "How to keep a cash account on a farm". This account book provides directions and space for keeping a very simple record of your farm receipts and expenses and tells how to figure up your labor income at the end of the year. This publication was formerly sold by the College at cost. It can now be furnished to any farmer in New York State who will make good use of it. Your farm bureau or the College will send you a copy on request.

Record of a Year's Business on a Farm

EXPENSES	RECEIPTS
Livestock bought	Milk, cream and butter
Labor	Wool
Feed	Eggs
Seed	Livestock sold
Fertilizer	Crops
Taxes	Wood or posts
Machinery repairs	Increase in livestock
Horse shoeing	Increase in feed and supplies
Bldg. repairs	Other receipts
Threshing	TOTAL
Silo filling	SUMMARY
Gas and oil	Average farm capital
Fire insurance	Total receipts
Decrease in livestock	Total expenses
Decrease in feed and supplies	Difference
Other expenses	Interest on farm capital at 6%
TOTAL	Labor Income

probably have been invested elsewhere in farm mortgages at 6%. In this way it would have earned \$900. If we subtract this \$900 that the money would have earned elsewhere from the \$1,500, we have left \$600. This amount which is sometimes called labor income is the pay that the farmer received for his year's work. In addition the farmer had the use of a house, and fuel, milk, and other farm products. A labor income of \$600 does not mean that the farmer had that amount left at the end of the year. He had to live and support his family. It means that as a business proposition the farm paid running expenses, interest on the money invested, and a wage of \$600 to the farmer.

How to Figure the Labor Income on Your Own Farm.

Figuring up the labor income on a farm is not an intricate or difficult job. Records and accounts are desirable, but not necessary. No knowledge of bookkeeping or accounting is required. Paper and pencil, and an evening at the dining room table are all that are needed. If you have been taking an annual inventory and keeping a record of your farm receipts and

What Shall We Do About the League?

The Mistakes, Success and a Suggested Future Program

By E. R. EASTMAN

Editor, American Agriculturist

MILK marketing has been a problem over which men have disagreed and fought for more than half a century. Yet in all of this period, I do not believe there has been a time when the whole situation was so clouded, when the air was so filled with charges and counter-charges, and when the feeling among dairy farmers has been so intense and bitter as it is right now. There are at least two main reasons for this unfortunate situation.

One is that the dairy business is just at present going through the general agricultural depression which has overtaken every other line of farming, and this period of low prices makes farmers discouraged and puts them in a bitter mood.

The other reason is that the market depression has been further complicated by a fight among the dairymen themselves and their organizations over the best methods of putting their product upon the market.

During the last few weeks, the situation has become particularly bad and I have been flooded with letters from dairymen begging me—because of the inner knowledge that I am supposed to have from years of experience in the milk marketing business—to come out in the AMERICAN AGRICULTURIST and tell the whole truth.

NO ONE KNOWS IT ALL

Let me stop to say right here that no one knows all of the truth about this marketing business, or about any other problem for that matter. There are some positive people in this territory who are setting themselves up as being all-wise and knowing just what should be done to the crossing of the last "t" and the dotting of the last "i" to solve this milk marketing problem. But I say unto you that you should beware of the men who know it all. Verily, they are false prophets. We are all groping more or less in the dark. We never can open more than a door or two at a time into the future. Particularly is this true in as complicated a problem as that of marketing. All that we can hope for is progress a step at a time, progress gained only by painful toil, expense and sacrifice.

WE WANT TO BE RIGHT

It is a source of great satisfaction to me to know that I have the confidence and the faith of thousands of farmers in the great New York milk shed. It is good to know that there are a larger number of thousands who have faith in the integrity and the honest dealings of the old reliable AMERICAN AGRICULTURIST. We want to keep that faith. ABOVE ALL WE WANT TO BE RIGHT. Therefore, if we had been absolutely sure of what the right thing was to do to solve these difficult milk problems, we would have said so long ago.

But years of study convince me that the more I know of the facts concerning marketing, the less sure I am of what the remedy is. I have been careful of being too critical of what different groups of men are attempting to do in working out their problems in this territory for fear that I in my ignorance might destroy what these men have been painfully building a step at a time for years.

WHAT ARE FARMERS TO BELIEVE?

Yet I feel sorry for the man back on the hills who picks up one paper and reads an attack upon what one group of farmers is trying to do through organization, and then picks up another paper and reads exactly opposite statements. How is a farmer going to decide, if statements on both sides of his great problem are so contradictory?

So keenly have I felt my responsibility to our people regarding this milk situation that I have been unable during several periods in the past two years to sleep nights from worrying

over it. I have a deep and abiding faith in the good judgment of the American farmer. I do not believe that there has ever been an instance in American history that the farmer has made a mistake when he had all of the uncolored facts.

I want to make it plain that I do not claim to know all of the facts. Especially do I wish to make it clear that I cannot be certain of what the right program for the future is. But with the hope that I may help a little, I am going to set-down here without fear or favor some of the facts that I do know and some of the things which it seems to me might be done to help relieve the critical market situation which our dairymen are now facing.

SOME BAD LEAGUE MISTAKES

I am going to begin by discussing some of the mistakes which the Dairymen's League

tion must come from the resolute demand of the membership itself.

NO DOUBLE POSITIONS

I refer to the practice of hiring League directors into salaried positions. At least a third of the League directors hold two jobs with the organization, one as a director, another as a salaried employee. Now no matter how honest these men are, and I believe they are both honest and sincere, it is impossible for them to vote upon a policy without having their decision more or less influenced by the fact that they draw a salary as an employee of the organization. Also, it is human nature that the remaining directors will be more or less influenced in their decisions by their jealousies of the salaried directors, and by the hope of getting themselves into similar positions. Moreover, the dairymen whose director does hold such a position are not on the same level with those dairymen whose director is a director and nothing else.

I believe that some of these directors, possibly all of them, are rendering excellent service as employees, and experience as a county president or a director no doubt trains them for future work with the organization. But here is the point: IT IS VITAL THAT THE MEMBERSHIP DEMAND THAT WHEN A DIRECTOR BECOMES AN EMPLOYEE, HE SHALL RESIGN AS A DIRECTOR. With this situation corrected, dairymen need not seriously worry about politics within their organization.

A MISTAKEN SALES POLICY

Now let us concern ourselves for a moment with the great mistake which the organization made in its sales policy for canned goods. The manufacture and sale of League by-products has as a whole never been a success. For some of this, the management cannot be blamed; for a part of it, they must accept some responsibility. Space is too limited to review the situation which led to the building or purchasing by the League of a large number of manufacturing plants for evaporated and condensed milk. But dairymen will recall that after the great export trade during the War ceased, thousands of farmers were thrown out of a market for their milk and the League undertook the responsibility of giving them a market by opening manufacturing plants. This demand came from the membership itself, and the management simply followed the demand. It is doubtful if the directors could have done anything else, particularly if they were to follow the policy of protecting their members.

MANUFACTURING HAS NOT PAID

These plants have never paid and it is doubtful with the conditions in the market that have prevailed for the last few years if anyone could have made them pay. The loss on the goods handled through these League manufacturing plants explains in part the difference between the pooled price which the dairymen actually received and what they should have received had all of the milk been sold at classification prices. Realizing that their plants were not paying, the League began to establish a brand for their products and to build up a sales policy.

Then there began to be circulated around the fool idea that what the League needed was a "big man" to direct their sales organization. The directors yielded to this, and without sufficient investigation they hired a man to head their sales department by the name of Stanley Q. Grady. But we are informed, Mr. Grady was a better salesman in selling himself to the directors than he was in selling the League products. He was paid a salary of \$25,000 a year, and in the opinion of many men who

WARNING!

MATERIAL in American Agriculturist is fully protected by copyright and warning is hereby given that no part of this article shall be copied except by written permission from American Agriculturist. This article, treating as it does upon conditions which affect hundreds of thousands of farmers, cannot be safely read or repeated in part. We have no desire to review mistakes without commenting at the same time upon results, or vice versa. The situation must be considered as a whole.

Cooperative Association has made and is making. But I want to ask you in all fairness, if you read any farther that you read all the way through. No one ever gets the farmer or anybody else anywhere by a purely critical, destructive attack, and the discussion of the mistakes of this organization which follows should not be considered without remembering at the same time the good results that have been accomplished.

POLITICS, BUT NOT DISHONESTY

One of the most serious problems of the Dairymen's League Cooperative Association at the present time is that of personal politics which have been and are being played. It is, of course, absolutely impossible to build a great organization involving salaried positions and places of power and influence without having some politics. Our government itself, the best in the world, is filled with a large amount of political maneuvering for position.

I want to say, too, that after several years' close connection with the inside management of the Dairymen's League Cooperative Association neither then nor since have I ever known of there being any actual dishonesty or grafting in any way, shape or manner. I do not believe that there ever has been any.

But there does exist a political situation in the Board of Directors of the Dairymen's League Cooperative Association which must be corrected before the organization can make any large amount of progress, and this correc-

were familiar with the facts, his policies were liabilities to the dairy farmers.

In the first place, Mr. Grady was brought from the Far West, where he had had some experience in marketing raisins. He knew little or nothing of marketing milk, which is an entirely different problem, and the force of expensive men which he brought with him apparently knew less still.

CANNED MILK IN NEW YORK CITY

One of Mr. Grady's policies was to sell the League canned and evaporated milk in New York City, and he spent thousands of dollars in advertising to do this. We do not know how much he sold, but we do know that every time he convinced a New York housewife that she ought to buy canned milk, she bought less fluid milk. If there is any advantage which the eastern dairy farmer has over dairymen elsewhere, it is the fact that he has a monopoly on the fluid milk business in New York City.

It was not long before the good sense of the League directors asserted itself so that they began to realize that Mr. Grady's policies were a mistake. His power was gradually removed from him, and they finally let him go.

In this connection, we are not quarreling with the salary which was paid him, if he had been the right kind of man. I think that while there might be altogether too many employees in the Cooperative Association, salaries are reasonable, including those of the officers. Farmers must expect to pay their employees in proportion to what other business does, or else they will be at a constant disadvantage in dealing with other business. The difficulty with Mr. Grady was that his salary was evidently out of proportion with his value as a salesman of League products.

LET MANUFACTURING PLANTS GO

When Mr. Grady was released, R. E. Van Cise, a milk man with a lifetime of experience, was placed at the head of the sales work. As a result, it has rapidly improved. Further than this, the directors, by sales and rental of their manufacturing plants to the Borden's in the last few days, have in my opinion stopped a tremendous leak in their expense and solved a problem which has been outstanding since these manufacturing plants were built or acquired.

EXPENSES ARE TOO HIGH

Speaking generally, I think the expenses of the Cooperative Association are altogether too large. In fairness, this should be qualified by stating that no one has any appreciation, until they have studied the problem, of the tremendous amount of work that has to be done in operating the pool. It takes literally hundreds of clerks to figure the returns each month. In fairness it should be said that considerable study has been made by the directors in simplifying operation and trying to cut them down. The sale or lease of the League's manufacturing plants will simplify the problem some, and should reduce the League's operating expenses two or three cents per hundred pounds.

THE QUESTION OF HIGH SALARIES

I do not think either, as I have already stated, that the League has been extravagant in the payment of salaries. I do think that there are more executives drawing salaries than are actually needed. No doubt they are doing good work, but the point is that the farmer himself has been forced to cut his expenses during these depressed times right to the bone, and he has the right to demand that his organization do the same thing so far as it can without impairing its efficiency. The last deduction for expenses was 9 cents a hundred pounds and that constitutes a grievous burden to the poor dairymen back on the hills.

I understand that an honest effort is being made to reduce expenses. I hope that no more blunders will be made like spending thousands of dollars to move the organization to Utica

and in renting a big office building up there on a long time lease, only to move back again to New York City in a comparatively short time.

BE FRANK WITH MEMBERS

While we are talking about the News and the publicity policy of the League, I believe that one of the greatest mistakes that has been made is the failure of the management to be absolutely frank with its members in regard to real information on what is taking place. I believe the management is sincere in its statements that it cannot give its membership information without betraying business secrets to its competitors. But the unfortunate part of it is, that in a majority of instances the other business interests and the competitors of the Dairymen's League often know all about its transactions in spite of the League's attempts at secrecy, while the membership, being farther removed, does not know what is going on.

Yet we know that the great fundamental basis of any cooperative organization is the confidence of its members. For instance, there are perfectly good reasons why the pooled price each month actually paid to the members is several hundred thousands of dollars under what the pool price would have been if all of the milk had been sold at classification prices. Yet the League farmers were never given this information in written form; but the members finally learned it from an outside source, and under circumstances which do not make for confidence.

THINGS MEMBERS SHOULD KNOW

The membership certainly has the right to know what salaries are being paid its officers, what prices are paid for plants purchased, and received for those sold or rented. Also, what a lot more confidence dairymen would have in their organization if a policy of perfect frankness were used in discussing all mistakes of the organization whether or not they could have been avoided. Sensible men expect mistakes. They cannot be expected, however, to continue to accept in blind faith so much that is apparently unaccounted for.

In justice to the League management, it must be said that the members are somewhat to blame for not having full information, for much of it has been given frankly by the League's representatives at meetings—and those comparatively few who have attended meetings have a better understanding of what is going on. It is noticeable too that it is this class of members who attend meetings that is the most loyal. I do not mean that policies need to be given publicity before they are fully determined or worked out. I do mean, however, that the membership has the right to all of the facts when they are once established.

A LITTLE MORE GIVE AND TAKE

In my opinion another mistake of the management has been its failure until very recently to recognize the other fellow, or to even give any real consideration to suggestions from leading farmers in their own membership for modifications of League policy. There is some excuse for this attitude for the League got on its feet in the first place by fighting. Without a considerable fight with the dealers, it would never have gotten started. But unfortunately, while a more conciliatory attitude toward the dealers has been used, a very arbitrary and militant spirit has been adopted toward other farmers not in the organization and even at times toward other farm organizations not in the milk business.

However, the League management has not been alone in this attitude, for, as I have many times said, there is a foolish and destructive spirit of bitterness among farmers themselves, both in the League and out of it, which is not getting anybody anywhere. This is fostered by some of the milk dealers, and no doubt pleases them immensely.

SOMETHING FOR ALL TO LEARN

As I said at the beginning of this article, no one man or set of men has a monopoly on all

of the cure for the milk marketing problem. Many men and many organizations are at work on this problem. All of them are making mistakes; most of them are learning things of value toward finding the real remedy. What is needed is an elimination of the foolish spirit of bitterness and animosity, supplanted by an era of real cooperation among farmers, not only among those within any one organization, but among all dairy farmers in all of the organizations.

Referring specifically to the League, there is opportunity to listen to sincere and capable advice from thoughtful men, both in the membership and outside, before ramming ahead too rapidly on a "Pike's Peak or bust" policy, without giving consideration to the modification of details which may make the difference between success and failure. We have said many times that cooperative marketing is blazing the trail. It is a question of going ahead a little way and then maybe finding that the road is wrong and backing up. There should be a willing spirit in all of the organizations of backing up and making a fresh start when experience proves them to be on some wrong road. I am glad to say that there are some signs that the League management has come to see the necessity of recognizing the other fellow and of modifying, if necessary, its details and policies.

SOME UNJUST CRITICISMS

So much for what I consider some of the mistakes that have been made in the management of the League. Let us discuss for a moment some of the things that the League has been criticized for, but which in my opinion have been only the working out of sound and common sense policies.

Just at the present time the air, both in country and city, is filled with criticism of the League because of what is claimed its too close association with the Borden's Farm Products Company. Those who are bringing this criticism are in my opinion either enemies of the League farmers or else they have no understanding of the true situation.

Every dairyman knows that the way to get a decent price for Grade B milk is to sell it in fluid form at Class 1 prices. The great reason for the difference in price which has existed between poolers and non-poolers is that some of the non-pooler dealers have disposed of more of their milk in Class 1 price than the League was able to do because the League has so much surplus.

Farm Taxes in New Jersey

Reason for Jerseymen's Heavy Burden

The following article is an address which Mr. H. C. McKenzie delivered before the annual meeting of the New Jersey Federation of County Boards of Agriculture, held in the Assembly Chamber at Trenton on January 14, 1925. Mr. McKenzie is the tax expert of the New York State Farm Bureau Federation.

H. C. MCKENZIE

Tax Expert, New York State Farm Bureau Federation.

ance of an equitable assessment. Are you getting it?

The General Property Tax is a hangover from Colonial Days when al-

most all the wealth of the country consisted of real estate and tangible personal property, cattle, tools, etc. But this is no longer true. The growth of corporations, the issuing of stocks and bonds, mortgages and other intangibles has brought about a situation where real estate, which is the chief source of revenue, under the General Property tax, represents only a fraction of the wealth of the country and a minor fraction at that. Kansas has recently made some investigations along the lines of equality of assessment and they found some surprising things. It was found that, as a rule the smaller parcels of property were assessed at a much higher rate than large properties, while some properties might be assessed as high as 85 per cent others were less than 50 per cent. What data I have been able to gather in regard to New Jersey assessments show equally wide variations.

Too Much Tax Exemption at Present.

Furthermore, a considerable amount of property is exempt by law. In New York over 20 per cent of all real estate is exempt. In New Jersey you have an assessed valuation of \$4,446,000,000 and exemptions of \$569,000,000, or 11 per cent.

Again, it is a well known fact that tangible personal property largely escapes by exemption or otherwise. As to these intangibles, (stocks, bonds, etc.), no state depending upon the General Property Tax has over 10 per cent of the intangibles on the tax rolls, to say nothing of TAX FREE SECURITIES.

The net result is startling. Half the property, or less, is paying over 90 per cent of the taxes, and of the half the property that is paying some are paying on twice as high a valuation as others. The extreme examples may be paying three or four times the taxes they would if all the wealth of the state contributed proportionately.

You see part of this in your total General Property Tax Rate of \$3.671 per \$100 of valuation. If your average assessment is 60 per cent of the true value you are paying in taxes every year 2.2 per cent of the value of all real estate in taxes. In New York 30 per cent of all the net income from real estate is absorbed in taxes, and I judge that you are not far behind. Equality of taxation is the end we are striving for. Unless you can do what no other state has been able to accomplish you cannot equally distribute the tax burden by reliance on the General Property Tax.

Where the Burden of Taxation Hits.

The bulk of the burden everywhere is made up of: first, School Taxes; second, Road Taxes.

A farmer in New Jersey with a farm worth \$15,000 would be assessed for \$9,000 or \$10,000, and pay probably from \$2 to \$30 on a thousand. What does the man with a salary of \$25,000 pay who works in New York and lives in a rented house in New Jersey? He pays \$1 poll tax and probably there is included in his rent bill something for school tax, but the balance of his income escapes entirely. This situation needs correction.

No more state or county bonds should be issued for hard roads that are to be paid by a General Property Tax. If New Jersey is in the same class as New York, and I think that it is, all the upkeep and construction and from 50 to 75 per cent of the cost of new construction should be financed by taxes on the users of the roads: license taxes, gasoline taxes, gross weight tax.

FERTILIZERS

"The World's Best
by Every Test"

What Does "AA QUALITY" Mean?

"AA" means the highest financial rating in business:

"AA QUALITY" means the highest quality rating in commodities:

"AA QUALITY" FERTILIZERS mean fertilizers that have the highest quality rating:

because

They have the greatest crop-producing powers, being the result of long, practical experience and scientific research.

The plant foods they contain are selected and formulated with special reference to the requirements of each crop.

They are thoroughly manufactured, blended and cured and are therefore in perfect mechanical condition.

Their record of continuous success covers a period of over half a century.

"AA QUALITY" FERTILIZERS are therefore
"The World's BEST by Every Test"

Ford's Sound Seeds

DO JUST WHAT YOU
WANT SEEDS TO DO

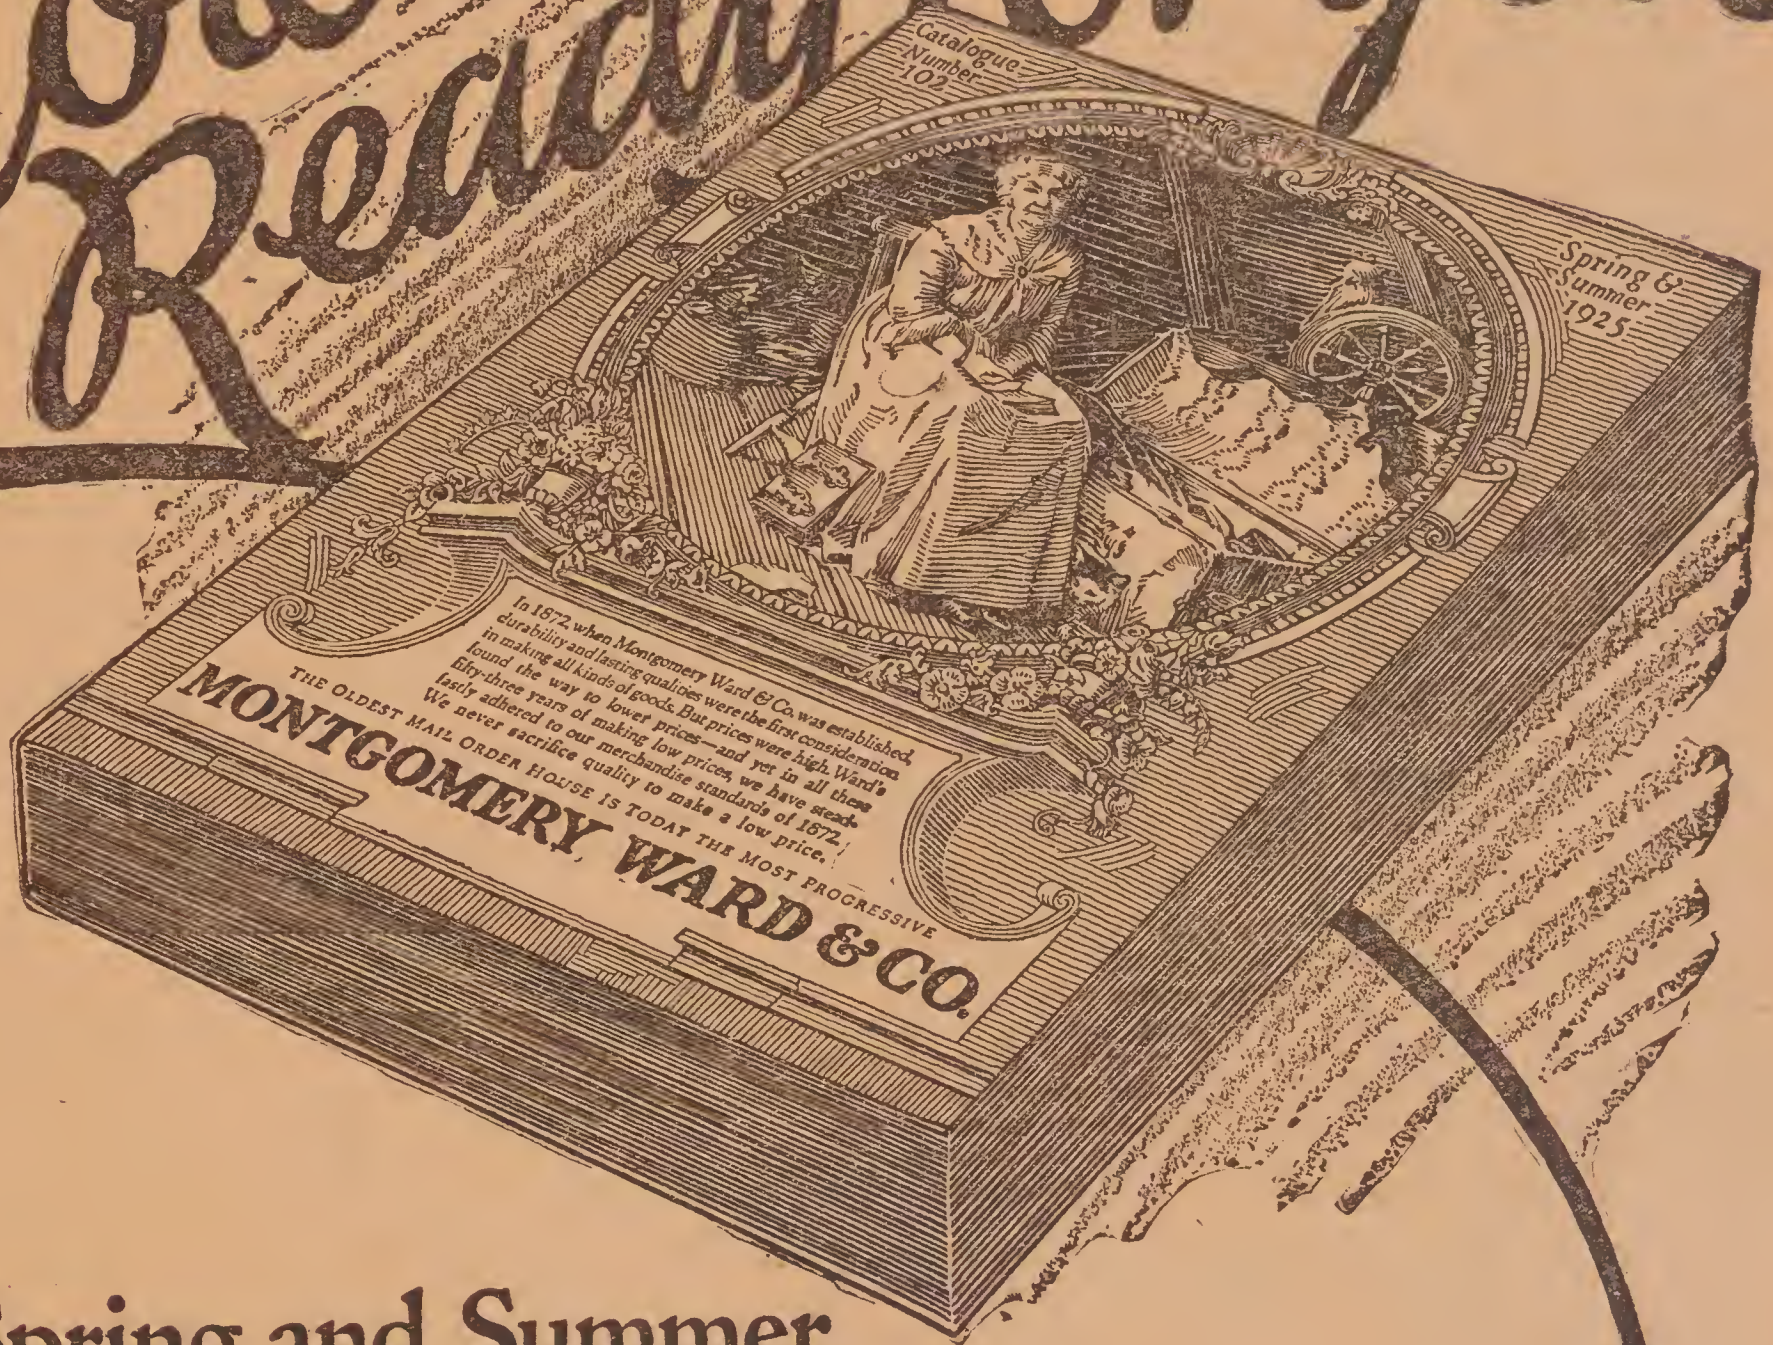

They germinate, produce strong healthy plants, perfectly satisfactory crops and profits for the grower.

THAT IS THE KIND YOU WANT

Send today for our 44th Annual Catalog. If you grow vegetables for market ask for our Market Gardener's List. We have satisfied customers everywhere.

FORD SEED CO., Box 2, Ravenna, O.

Now Ready for you

Ward's Spring and Summer Catalogue—Is Yours FREE

JUST imagine one vast floor, containing over 100 acres, and filled with sixty million dollars' worth of fresh, new merchandise!

That is exactly what is back of Ward's catalogue. That is what Ward's big stores contain.

And this Catalogue brings into your home the wonderful opportunity to choose whatever you wish, whatever you like best, from one of the greatest assortments of bright new merchandise ever gotten together.

**Is a Saving of \$50
Interesting to You?**

There is a saving of \$50 this season for you—if you write for this book and buy everything you need at Montgomery Ward & Co.

All over America we have searched for bargains. In Europe our buyers have found bargains for you. We have gone to every market where "quality" goods

could be bought for cash at lower-than-market prices.

**"Ward Quality" is
a Guarantee of Satisfaction**

We never sell unsatisfactory goods that are merely "cheap." We offer no "price baits." We never sacrifice quality to make a low price.

You will find it a pleasure to deal with a house like Ward's—where your satisfaction is the first consideration—where every piece of merchandise is tested to make sure it will give you service.

**The first mail order guarantee
published in 1876**

Ward's originated the mail order business in 1872. In our Catalogue of 1876 we published the first mail order guarantee: "Your money back if you are not satisfied." And this spirit of the Golden Rule, of dealing as we would be dealt by, of selling

only the satisfactory kinds of goods that we ourselves would want to buy—this spirit of satisfaction and service to our customers has been the corner stone of Ward's for fifty-three years.

**Everything for the Home,
the Family and the Farm**

The Woman—young or old—will find this Catalogue a pleasure. From the latest New York Fashions for the college girl, to the most beautiful new dresses and hats and coats for the mother—all selected in New York by our own Fashion experts.

Every Man will find all his needs supplied at a big Saving. Everything a man or boy wears or uses around the home and the farm, at money saving prices.

The Home has been our especial study. We try to offer the new things, household inventions, new designs in rugs or curtains, the best in furniture—everything that goes to make the delightful home. And our low prices often make possible the purchase of many more things than otherwise could be bought.

**Your Orders are shipped
within 24 hours**

Your order will be shipped within 24 hours. That saves time. But remember, too, that one of our six houses is near to you. It takes less time for your letter to reach us, less time for the goods to get to you. It is quicker to order from Ward's.

To fill in this coupon now is to secure for you and your family the largest possible savings, a new pleasure, and a new experience in satisfactory service.

What Readers Want To Know

Does Acid Phosphate Make the Soil Acid?

"DOES acid phosphate make all the soil acid?" This question is coming to us regularly. It is a very good one for discussion as it is quite natural to expect—judging by the name "acid phosphate"—that such a substance would produce an acid reaction in the soil.

The truth of the matter is that acid phosphate *does not* make the soil acid. But there are cases where it has been found to have had a slight tendency to correct acidity. For this reason it is unfortunate that such a name was ever given to this particular form of phosphate. In other English-speaking countries it is more properly called "superphosphate".

During the past few years, much evidence showing that acid phosphate does not increase the acidity of the soil has been obtained. In these experiments, acid phosphate was actually applied to the soil under field conditions for a number of years, after which the acidity or lime requirement of the soil was determined and compared with the same soil which had received no acid phosphate. None of these tests show any increase in acidity due to acid phosphate.

Some Specific Instances

In some experiments in New Jersey a total of 15,000 pounds of acid phosphate per acre was applied over a period of 23 years. At the end of this time, the soil receiving applications of acid phosphate had essentially the same lime requirement as the untreated soil.

A field test in Indiana, extending over 20 years, during which time a total of 2,633 pounds of acid phosphate per acre was applied, showed that the soil from the acid phosphate plots at the end of this time showed slightly less acidity than the soil from the untreated plots.

In Ohio, plots that had been treated with acid phosphate for a period of years showed less lime requirement than the untreated plots.

An annual application of 500 pounds of acid phosphate for 15 years failed to increase the necessity for lime in a Massachusetts experiment.

Will Not Replace Lime

Just because some of these experiments show that the acidity of soil was reduced and the lime requirement was less pronounced, it does not say that acid phosphate will correct soil acidity in all cases. It will not add to it, that is sure. Lime cannot be replaced by anything else, and if the legumes such as alfalfa, clover, peas and beans, are to be raised we must add lime to the crop's food ration. Nothing else will do. Of course, lime comes in several forms, and your circumstances will decide which is best—but nothing will replace the calcium in whatever form it may be, in the plants food requirements.

Lime in Oyster Shells

Would you please inform me how much lime there is in pulverized oyster shells? Are the pulverized oyster shells as beneficial to the soil as hydrated lime? What proportion of pulverized oyster shells should be used to the acre.—C. L. S., Pennsylvania.

GROUND oyster shells offer a good source of carbonate of lime. The percentage of carbonate of lime in lime falls below that in ground limestone. However, it has in addition to the lime, a small amount of nitrogen and phosphoric acid. Ground oyster shells will analyze anywhere from 85 to 95% calcium carbonate.

Pulverized oyster shells cannot be compared to hydrated lime except on the amount of each that is applied. About 2200 pounds of ground oyster shells will be equivalent to 950 or 1,000

pounds of hydrate. Therefore pulverized oyster shells with flour of good quality should be applied at about the same rate or a little bit heavier than ground limestone, which is usually applied at about a ton to the acre.

The disadvantage of buying ground oyster shells as the source of lime, lies in the fact that you are apt to get considerable foreign matter that has no liming value or fertilizing value.

Burned oyster shells have somewhat the same position as burned lime. However, this burned form of shell goes back to the hydrate form more rapidly than burned stone lime. There is little or no burned shell on the market.

Nitrate of Soda on Strawberries

Is it good to put nitrate of soda on strawberries that are to be picked this year? How much should I use to an acre and when should I sow it?—George Hukt, Monroe Co., N. Y.

THE use of nitrogen has been found profitable in the growing of certain varieties such as Marshall, Glen Mary, William Belt and Chesapeake. It should be used, however, only when the plants normally do not make a rapid vegetative growth in the spring. The use of about 100 pounds of nitrate of soda applied about a week after the plants have started to grow in the spring may prove beneficial. I would suggest leaving several plots without an application of this fertilizer in order to determine for yourself whether or not you are getting any profitable results under your conditions. Care should be taken not to have the fertilizer touch the green surface. It should be applied between the plants rather than on the leaves. If you have used a strawy barnyard manure as a mulch I would hesitate to use the nitrate in addition.—P. W.

Setting Out Asparagus

I am thinking of setting out an asparagus bed. How many roots do I need to set an acre and a half? What age plants are best to set and when is the best time to set them? How far apart are they planted?—W. H. P.

ASPARAGUS roots are planted in rows from four feet to six feet apart. Green varieties are usually the Mommouth Whites are planted two feet wider apart. Green varieties are planted from 18 inches to two feet apart in the row, while white varieties are seldom planted less than two feet apart in the row. Following is a table of the number of plants per acre with the various combinations of planting distances.

15 in. x 4 ft.	8,712 plants
18 in. x 4 ft.	7,260 plants
2 ft. x 4 ft.	5,445 plants
2 ft. x 5 ft.	4,356 plants
2 ft. x 6 ft.	3,630 plants

In most sections of the country asparagus is usually planted in the spring. In northern sections spring planting is preferable because the fall planted roots may be injured by freezing before they become well established.

After the soil has been thoroughly prepared deep furrows are opened by running a plow a couple of times each way where the row is to be set. The roots or mows are set in the bottom of the furrow and covered to a depth of two or three inches. The trench is gradually filled as the plants develop. Growers usually like to have about eight inches of soil over the roots. To cut this it is usually best not to apply too deeply but to raise a mound a few inches.

Year-old plants are preferred by growers while others prefer older stock. Some growers prefer three-year old roots. The culture of asparagus is well described by Hexamer in his book, "Asparagus" which can be procured from AMERICAN AGRICULTURIST.

in 1930

There will be two groups of fruit growers. Those who bought fruit trees certified or guaranteed True to Name and those who did not. The first group will be happy, contented and prosperous. They will reap the reward of their good judgment and their time, fertilizer and labor.

The other group will realize, when they pull up their trees, that the cost of the nursery stock is the smallest part of the cost of a bearing orchard.

KELLYS' Certified True to Name Fruit Trees

RELIABLE FOR 45 YEARS

It's easy for you to find out what results other fruit growers have had with Kelly Trees because they are growing all about you. Ask us the names of fruit growers near you who have bought Kelly Trees. Write or visit them. See the trees growing. Talk with the grower.

Pruning the Old Orchard

PAUL GILLETTE.

ACCORDING to Professor Oskamp, the extension fruit specialist of the Department of Pomology of the New York State College of Agriculture, most old apple trees are carrying too much wood. In a talk delivered before a group of farmers he said that what we need to watch in pruning is an even distribution of operations over the tree. Too often we see just the opposite. There is no question but what the tree that has been intelligently pruned produces better and is easier to work upon than one that has been pruned carelessly, or has not been pruned at all. In general if pruning were restricted to the cutting of limbs around the thickness of a man's thumb, the results would be a great deal more satisfactory. However, we always come upon some badly neglected orchards where the only course open is to remove several large limbs in their entirety. In general the trouble with most old orchards is that they were not pruned when pruning would have been most beneficial. The failure to prune trees between the ages of 25 and 35 is serious, and such negligence complicates matters later on.

Upper Portions of Tree to Often Neglected.

Another point that Professor Oskamp brought out was the fact that ordinarily the pruner does not pay any attention to the upper proportions of the tree with the result that it evidently grows to such proportions that the upper limbs overshadow the lower, shading out all light. As a result the lower limbs die off, and a greater amount of growth is thrown into the upper regions of the tree. He recommends distributing the cutting over the top and gradually down over the crown of the tree so as to spread an equal apportionment of light throughout. He does not advise opening immense triangular spaces through the tree, but he does believe in opening it up with several slot like openings at intervals across the top, in small portions so to speak.

* * *

Geneva Station Has Fine Bulletin On Pruning and Heading

Recently the Geneva Experiment Station came out with an excellent bulletin on the subject of pruning apple trees that fruit growers cannot be without. This time of the year is particularly important to the fruit grower for in a very short time he will be out working in his apple trees. The fruit men at the Geneva Station have been conducting some pruning experiments for a number of years on comparative amounts of pruning and heading.

The pruning tests were made with Baldwin, Boiken, Esopus, Hubbardston, McIntosh, Spy, Greening, Rome, and King, 11 goods standard varieties. The comparison of little and much pruning was made with trees all headed about 2 feet above the ground when set out in the orchard. After the tree is started properly little pruning will later produce a tree with a larger head, having a greater bearing area, with less effort on the part of the orchardist than will much pruning, say the Station specialists. This condition developed in about ten years in the Station experiments, and the trees maintained equally as good shape and symmetry.

With regard to high and low heading of apples the Station workers found that the root systems of the low-headed trees were more firmly established in the soil and thus offered greater resistance to the wind than did high-headed trees. This should be an important advantage, especially in exposed location. The low-headed trees were also much larger and stockier in the trunks and branches and had larger heads with a greater bearing area than did the high-headed trees.

CALLAHAN HAY GUIDE

"I consider the 'Guide' as much help to one man unloading as the 'loader' is to one man loading," writes E. C. Jillson, New York. It puts the hay into any part of the mow without hand forking.

"Saves Hand Forking in the Mow." Saves labor; saves money.

Ask your dealer for the Callahan. If he cannot supply you, we will.

The Callahan can be used in almost any type of barn and with any style of hay fork. It pays for itself the first week—solves the labor question in the hay mow. Free booklet shows exactly how it works. Write today.

Sugared Schumacher Feed

For Health—For Large Production For Economy — For Profits

Sugared Schumacher Feed meets the needs of the dairy cow and the dairy farmer.

Sugared Schumacher Feed is ideal as a ration for the entire dairy herd. Start your young calves on it. Grow and develop the yearlings on it. Build up the dry cows and springers with it. Make your milking herd most profitable by its liberal use.

Sugared Schumacher Feed is essentially a scientific blend of choice products of corn, oats, wheat and barley with the right amounts of molasses and mineral compounds.

It is very palatable—Cows relish it. It is highly digestible—Cows thrive on it. It is varied—Cows continue to like it. It is rich in carbohydrates—Cows need it. It is economical—Dairymen make money with it.

Blackburn College Farm, Carlinville, Illinois

The Quaker Oats Company,
Chicago, Illinois.

Dear Sirs: "Here at Blackburn College we have a milking herd of seventeen pure bred Holsteins which we feed for maximum production.

"I have always ground and mixed my own feed until I discovered Sugared Schumacher Feed because I believed it cheaper and better. Sugared Schumacher Feed has nothing in it but feed and I consider it the purest, finest feed there is on the market. I have fed it to our herd here at the college for almost a year and from the first have had very remarkable results as is proved by the accompanying illustration. The cow in the picture is a three year old. She is being fed 8 pounds of Sugared Schumacher per day with some supplementary feeds. Her milk record for March was 2,473 lbs. of milk which is phenomenal. This production I attribute principally to good care and to Sugared Schumacher Feed, which is the basis of her ration.

"As long as The Quaker Oats Company put into Sugared Schumacher Feed the quality they are now putting into it and I have cows to feed I shall never be without it."

M. H. ALEXANDER, Farm Superintendent.

Suggested Rations

With alfalfa or good clover hay, feed Sugared Schumacher Feed straight. With mixed clover and grass hay, feed Sugared Schumacher Feed combined with an equal amount of Boss Dairy Ration. With timothy or grass hay, feed one part of Sugared Schumacher Feed combined with two parts of Boss Dairy Ration.

What Shall We Do About The League?

(Continued from Page 117)

The only possible solution was to get city markets for Class 1 milk. To get these markets, the League could do just one of two things. They could go into the distribution of fluid milk on a large scale in New York City or they could do as they have done, form an alliance with one of the big distributing companies.

League Cannot Distribute Milk

Those who would have the League go into business in the city on a large scale simply do not know what they are talking about. In the first place, the cost to League farmers would be absolutely prohibitive. There is complaint now about the large deductions, but these deductions would be many times larger were the League operating a big distribution business. Furthermore, the handling of milk in the city is a great technical business—a business handled by men like Loton Horton, President of Sheffield's and Harry Cronk, of Borden's, who have spent a lifetime in learning its many complexities.

It will be impossible for the League to develop within a short space of time men of a similar type. The League has lost money steadily on many of its country plants and much of its country business. It is not a part of common sense to refrain from plunging into any more business, particularly on a large scale, until it has been demonstrated that farmers can manage efficiently what they already have started? There are many other reasons why it would be foolhardy for the League to attempt city distribution at the present time.

But I repeat that it must have city outlet for Class 1 milk, and if it cannot operate that outlet itself, there is but one alternative left, and that is to cooperate with a big distributing company who will do the operating and take the responsibility for it.

Borden Alliance May Be Dangerous

Now there may be danger in such close cooperation. I am not saying that there is not. I think the League officers will admit, if you were to ask them, that there is some danger. But let us be fair and above all, let us be practical and ask ourselves what else was left for them to do? Personally, I do not get alarmed about the danger either. The Borden's are constantly extending their outlet in the city for Class 1 milk. On the other hand, they have less country plants than they had five years ago. They increased their city markets by purchasing the city plants of the big milk companies which the League recently bought, and their markets have also been extended very rapidly by the increase in consumption of fluid milk caused by a constantly growing population and by people using more milk.

Borden's Must Have Milk

WHAT DOES THIS MEAN? It means that the Borden's is just as dependent upon the Dairymen's League farmers for their milk as those farmers are upon Borden's for an outlet. It works both ways. There might be a time in the surplus season when the Borden's could get along for a brief period without League milk; but for the most part of the year, it would ruin them to try to bring fluid milk for any length of time from outside; and at these periods of shortage when milk is scarce, the Borden's would be unable to get it from Sheffield or any other distributing company because those companies would have to have their own supply for their own markets.

I believe that dairymen should watch most carefully and should have full access to the facts of all relations between their organization and the Borden's Farm Products Company. If they do this, there is little to lose and much to gain by reasonable cooperation between the big distributor and the producers.

Why The Pool Prices Differ

Another great criticism of the League is the apparent discrepancy in the average

weighted pooled price which the dairymen receive each month and the larger weighted pooled price which they would have received had all of the milk been sold at the announced classification prices. For instance, if you take the number of pounds in each class and multiply it by the price for each class, and average your answer, you will get a considerably larger pooled price per hundred than the League actually pays. This fact has been made the basis for intimating that the management is dishonest. We stated above that the League management foolishly laid itself open to criticism by not coming out months ago and clearly explaining what makes this difference in prices.

As a matter of fact, the difference is easily accounted for. A small part of the difference the poolers will get back in their thirteenth check; adjustments of freight rates account for some of it. But the biggest item between what the pooled price should be and what it actually is, is caused by the fact that the League has not been able to sell the milk and the products of its own plants at classified prices.

For instance, the classified price for milk on the terminal platforms of New York City may be, for example \$2.50. But the League, in order to meet outside competition, may have actually sold a lot of its milk from its own plants at say something like \$2.00.

Members Need Facts

Space will not allow me to go into further details on this subject, but I will simply say that before poolers accept the statements implying dishonesty, they should ask the League management for full statements of the facts as to why this discrepancy on the pooled prices exists.

Now I have been talking about mistakes but no fair review of the League situation can be written without speaking of results.

Outstanding Results

One of the outstanding results of organization is that the League has furnished its members with an insured market. Literally millions of dollars have been lost in this territory because of the failure of milk dealers. There is scarcely a community that has not suffered from this kind of loss at one time or another. It must be said of the League that it is careful about doing business with dealers who are not financially sound, and in the rare case when there are failures, the loss is spread over the entire membership so that any particular member is insured against what might be nearly his personal ruin if his particular dealer should go into bankruptcy.

Under the subject of guaranteed market, it ought to be mentioned also that a tremendous effort has been made by the directors of the League, even at the expense of hauling milk long distances, to insure every member a regular market, even when the local plant was suddenly closed by the dealer.

Farming Is Recognized

Another result of organization that will be of great benefit in years to come is the recognition of agriculture, of farming, and of the farmer, by the dealer, by the general public, and by the state and national governments.

You remember the story of a committee of farmers who were told by the dealers to "GO HOME AND SLOP THE HOGS." I have known something personally of this milk business for some years, and I know that that spirit on the part of the dealers and even of the public toward farmers did exist. "You take what we want to give you for your product and mind your own business as to what we do with it." That was the spirit in the old days. It was the idea in the state capitols and at Washington, too.

But that day is forever gone. There never was a time when there was more recognition of the farmer and his prob-

How I Bought My Bull

HENRY MORGENTHAU, JR.

IN the January 17th, issue, of AMERICAN AGRICULTURIST I told something about my experience with prepotent herd sires during the last eight years.

After the death of our last herd sire, HENGERSVELD HOMESTEAD DE KOL 4th, I immediately began advertising that I was desirous of purchasing another prepotent herd sire. I got very few answers to my advertisements. A recent bulletin giving a comparison of Holstein Friesian sires based on the average mature equivalent fat production of their daughters, written by C. W. Turner and A. C. Ragsdale of the University of Missouri, gave me a splendid list of about 100 of the leading Holstein herd sires. After finding out through Secretary Houghton which of these herd sires were dead, I immediately got in touch with the owners of the living sires on the chance that they might be willing to sell.

To my great surprise very few were willing even to consider the sale of any of these really great bulls. While this was very discouraging to me personally, I was glad to learn that the owners of these bulls realized the value of a prepotent herd sire. Finally, in desperation, I decided to go to Waukesha County, Wisconsin, so well advertised as "cow" county.

Waukesha a Great Cow County

On arriving at Waukesha, I immediately got in touch with Mr. Garvins of the Waukesha County Holstein Friesian Association, and he and I started out on a two days' hunting trip for a bull. You certainly have to take off your hat to Waukesha County and the Holstein organization that they have built up there. While I believe that there are many localities in the State of New York that have just as good Holsteins as they have in Waukesha County, the trouble is that they are not organized to bring the interested buyer and seller together readily. The Waukesha County Holstein Association is certainly unique in that the membership fee is nominal, and they rely entirely on their commissions derived from sales to support the organization.

They must sell a lot of cattle because they are able to keep two high class men going as well as three or four girls in the office. One of the interesting things that was brought to my attention at Waukesha County is that such a thing as a scrub bull is unknown. Every bull in use in Waukesha County is pure bred. Travelling the length and breadth of the county, you cannot help but be impressed with the quality of not only the pure bred herds, but also the grade herds.

Something For Easterners To Study

I came away with the impression that it seems ridiculous that in the great State of New York, which today has over 10,000 accredited herds, more than any other state in the union, there is no organization functioning to promote the sales of pure bred stock similar to the one in Waukesha County. The only effort that I am aware of made by the various pure bred associations to help their members dispose of surplus stock is an occasionally state auction sale. It seems to me that there is a big opportunity for the Holstein, Guernsey, Jersey and Ayrshire Breed Associations to study the Waukesha County Association and try to do something of similar nature on a state-wide basis here in New York.

Mr. Garvins and I covered 400 miles in two days over Wisconsin's wonderful system of perfect concrete roads and visited many of the prominent breeding establishments in Wisconsin. My pilot knew just where to go and what was for sale. He finally took me to the farm of H. E. Dickinson of Oconomowoc to show me some daughters of a bull at a nearby farm. While going through Mr. Dickinson's herd, I was

(Continued on Page 128)

You wouldn't stand for this One Minute

If some one scraped the butter left over from your table into the garbage can after each meal you certainly would put a stop to it immediately.

Left-over butter must be saved for another meal, but how about the "left-over" butter-fat which your present separator leaves in the skim-milk? It isn't at all unusual for a new De Laval to increase the yield of butter-fat from the milk of just a few cows by a quarter to a pound or more a day. Think what this would mean to you in the course of a year.

Trade Allowance

Old centrifugal cream separators of any age or make accepted as partial payment on new De Laval. Sold on easy terms from

The new De Laval is the best cream separator ever made—skims cleaner, runs easier and lasts longer. Among other new features and refinements it has a self-centering bowl which eliminates vibration, causing it to run smoother and easier. It gives you a rich, smooth, high-testing cream, and skims cleaner under all conditions of use.

What Shall We Do About The League?

(Continued from Page 122)

lems on the part of everybody than right now. And the chief reason for it is that the farmer has asserted himself collectively and demanded his place in the social, economic and political life of this nation.

Some Cooperative Spirit

Out of organization also we have developed in spite of our unfortunate quarrelling and bitterness a LARGE AMOUNT OF REAL COOPERATIVE, BROTHERLY SPIRIT. It was true not so many years ago that the farmers could not stick together, but the way thousands of dairymen have stayed by the League through thick and thin—mostly thin—is one of the most heartening and encouraging things in my experience. Out of that great loyalty there is bound to come some time at least some results.

I have already pointed out in this paper that there has been for the most part good management of the League's finances. It is truly remarkable that the certificates of indebtedness have been maintained so near to par.

But the great result, that of actually more dollars and cents, is the one thing many men are now questioning. DOES THE LEAGUE PAY, IS THE FINAL ANSWER. It is absolutely impossible to actually prove your answer to this question one way or another. But in my opinion—which is backed by many thinking men familiar with the League situation and not in the League—this organization does stabilize the market and brings to every dairyman in this territory, whether he is in the organization or not, more money over a long period of time than he would receive were there no organization.

The trouble is with most of us that we are so apt to forget the teachings of history. Back in the old days, there was hardly ever a cooperative creamery established that competing dealers in the same territory did not immediately begin to offer higher prices to entice the cooperating dairymen away from their own creamery. Sad to relate, that policy almost always succeeded, so that nearly every community in the dairy country has had some sad experience in the failure of a cooperative creamery. But you will remember that as soon as the farmer's plant was gone, the dealer's prices went down to the same old level as before.

Why Dealers Fight Co-operation

We may rest assured that the comparatively good prices which some non-pooling dealers have paid have not been the result of any philanthropy on the dealers' part. They are rather the result of a policy similarly pursued by dealers in the old days of defeating a cooperative enterprise which might intine, if not defeated, become a menace to their business.

When we are thinking of the discouragingly low prices which all dairymen are getting at the present time, we want to remember what the wheat and other class of farmers have gone through, and to bring to mind the fact that the last three or four years have been the worst agricultural depression since the early nineties.

Now I come to the last of my statement, to answer the question: What shall we, both as poolers and non-poolers, do about this milk situation and about the Dairymen's League Cooperative Association?

Again I repeat that it is for you and not for me to decide. I am only trying to give some suggestions which come from long and painful study and considerable experience on this complicated problem. Here is my program:

What Shall We Do About It?

FIRST: STAND BY YOUR ORGANIZATION. That statement refers not only to the League, but to such other milk organizations throughout the East which are struggling, painfully, slowly perhaps, but none-the-less making an effort to give you a little relief in better milk marketing conditions. It is easy enough to be a friend

and to stand by when all goes well. It takes a man of fortitude and courage to see anything through in times of depression.

Do Not Throw Away Property

Speaking specifically of the Cooperative Association, you dairymen have twelve and a half million dollars invested, for which you hold certificates of indebtedness. Bear in mind that when you are criticizing the League, you are talking about your own business. Criticize if you wish. The foolish idea that seems to be prevalent that one cannot speak in a constructive, critical way of cooperation without being classed as an enemy is absolute nonsense. But nevertheless, I believe that you should talk to some purpose and that you should not allow yourself or anyone else to tear down a structure without having something to put in its place. The farms you own are not paying now, yet no sensible man is moving away and abandoning the property. Neither do we go away and leave a sick horse, or a sick cow to die without making all the effort possible to save the animal.

To be sure, the League is not very satisfactory at the present time, but some of that responsibility may be yours. Perhaps, considering the money you have invested in it, and its possibilities for good or evil, you have not been attending its meetings and giving the personal attention to it that you would to any other property in which you had as large an investment.

Look Before You Leap.

Also, here is something to think about. The League, through its arrangements with Borden's, has been increasing its outlets for Class 1 milk. These outlets have for the most part been supplied by non-pool milk. Therefore, every dairyman who cancels his contracts had relieved the surplus to some extent within the League and transferred it to the non-pool dealers on the outside. This may mean that League prices are going to be higher in the future, and non-pool prices lower. To be sure, when the League purchased the Clover Farms and other companies many of the local dairymen deserted the plants and transferred to non-pool dealers. This will increase no doubt the League's overhead in operating its country plants, but do not forget either that the League, through its alliance with Borden's, still holds the city outlets, and the loss in the operation of the country plants may be more than many times offset by the gains from the increased outlets for Class 1 milk.

So it seems to me that there are many reasons for staying with the organization, unsatisfactory as it no doubt is in many respects. A general desertion at this time would cause a great loss of property and even a greater loss in faith and belief in one another resulting confusion and chaos for both poolers and non-poolers, from which the industry would not recover in many years.

We Do Not All Have to Be in One Organization.

SECOND: If you are not in the League, why not have a good word for it? And if you are in it, have a good word for the fellow dairyman who is trying to solve his problems in some other way. No one in this world has a monopoly of all of the right. There is more than one way of doing a thing. If we can stop this foolish quarrelling and bitterness and jealousy among ourselves and our organization, which incidentally pleases the dealer so much, perhaps each of our organizations can in time contribute from their

Why Chicks die in the Shell

This vital problem in hatching has baffled poultry raisers for years, but now their causes and their correction have been discovered. L. N. Porter, inventor of

PORTER SOFT (MOIST) HEAT INCUBATOR

spent 30 years in studying and experimenting along these lines. He now offers to all interested: **FREE OF CHARGE**, a treatise on this subject. To those interested in better hatches and stronger chicks this treatise will be most valuable. His literature contains interesting and accurate incubator comparisons. Shows how to increase poultry profits and treats many other poultry subjects, sent free—but write today.

Books on the Hens

Stopped a Lot of Leaks for Us.

W. E. FARVER
Baltic, Ohio.

SOME of our greatest mistakes in the care and handling of poultry were revealed to us through the careful keeping of poultry records. For some years we kept records of our poultry. These records were accurate as far as they went, but while they showed the income, they failed to show the leaks. Then about three-years ago we began to keep the poultry records offered by the Extension Department of the Ohio State University, and overseen by the local country agent. That year our record was complete and full, but we had combined the expenses of the entire laying flock with the expenses of the raising of the chicks, and when at the end of the year our County Agent wanted to know something about the cost of the chick-raising, we were at sea. We couldn't tell. So the following year we kept a separate record of our chick-raising venture, and that year I learned more about raising chicks than I ever believed there was to the entire game.

When An Old Saying Did Not Work.

About that time we felt that we needed more space, but we could not see our way clear to erect a new poultry house to supplement what we already had. But we did sort of overcome the high cost of everything by building an addition to our house, which afforded us more room. We also provided more outside "run-way" space for the birds to roam in when the weather was favorable. We had also provided an extra number of pullets, which filled up our record sheet and ran up the feed bill without doing much to fill the egg basket or pocketbook.

At this stage of our poultry venture we also learned that the rule of "more hens, more profit," does not work to the same profitable end each time. We learned that it takes more investment to handle the larger number, that disease spreads faster, and the problem of the under-developed and less thrifty pullet is more acute.

We found that after we kept the records a while our expenses were much greater than our receipts, and this during the period when we should have been reaping a profit from the fifty-cent-a-dozen eggs. Many consider the months of October, November and December the leanest months of the poultry year. Our record keeping project taught us that unless the pullets be brought into active work during these months, and especially from October fifteenth on, there is going to be a sorry and lean-appearing summary when the year's work is tallied.

The First Lesson Our Records Taught Us.

So our following year's leading factor resolved itself into the hatching of the pullets early and crowding them through the summer so that they would begin laying in October and continue during the period of high prices. The general rule, and one seldom broken is that egg prices are high during the period from September to January. Record-keeping taught us that unless we get into the game with the pullet eggs during that period we might as well cease being poultry enthusiasts, for there is little to be enthusiastic over unless there is a profit balance on the ledger at the end of the year.

There is certainly nothing that will so make one sit up and take notice as a record staring at you in black and white and showing where the profits are coming from or where the leaks are that sap away your profit. The old saying, "What you don't know, you don't worry about", is true, in some cases, but not in the keeping of poultry.

Our first pullets were inventoried too high, because they were not worth it,

and also because they were not handled in a way that would bring any returns on the too high valuation. We heard a preacher say that a mistake is excuse once, but hardly when made twice, so we aimed to keep our second inventory down to real values.

Our Aneonas sure did show us a few things, when we came to handling them right. We hatched a bunch of chicks and also had another lot hatched at a local hatchery, and of over a thousand eggs, we had over 700 chicks. When fall came we had over three hundred pullets and a bunch of cockerels to inventory. The pullets were culled pretty hard, bringing down the number to less than three hundred.

Then the pullets were inventoried at less money, the figure representing what we could have sold them for as laying stock. We learned through our previous mistake that profits may be made to look larger on paper, and that this will do to serve as a winter evening pastime, but it will not buy a flivver or pay a note on the farm.

A Check on High Price Periods.

The total expenses of this lot of chicks, including everything that rightfully should be included, amounted to nearly \$200.00. We might go on and give a lot more figures for the same year, the year before, and the year following. We might tell about our year-old hens, but space forbids. Our aim was to tell a few things records have taught us. We wish to include a bit of experience as to the selling of cockerels.

As we have our receipts record before us, we see that we sold broilers in June at 35 cents a pound. In July it had dropped to 25 cents. In August they sold for 19 cents, in September for 17 cents, and in October for 13 cents. It took considerably more than twice as much of the October meat to bring what a pound of the June meat brought us. Each October bird had eaten at least twice as much feed, and should be worth about four times as much. We would have as well sold the little fellows in June, at almost any price. This experience showed us that early hatching is the foundation stone of all success and profit in the poultry industry.

Records Influence Feeding Methods.

Of course we learned that early hatching is not all. For a while we hand-fed them, but this was too much a task, and a large feeder was constructed, as well as a number of smaller ones. We fed both scratch grain and dry mash in self feeders, thus eliminating the labor part. We never had chicks to do so well as since we used this method.

Personally, we would not think of raising chicks without sour milk, milk in any form. Gallons upon gallons of it were fed our chicks. This was given a cash value of about fifty cents a hundred pounds. This may be high for some sections, but we figure that sour milk is worth what it costs in chick-raising.

Cutting this short, let me say that from the experience of several years we have gleaned enough information and have learned so much from our mistakes, that we would advise all to adopt some system of accurate record keeping and KNOW what your birds are really doing.

Did Your Hens Go To Roost?

PREVIOUS to January 24 I read of a number of instances where hens were said to have gone to roost during the eclipse of the sun. Frankly, I was a little sceptical about this,—from Missouri, so to speak. At the very most, the period of totality is said to be only about two minutes. After a hen starts toward the roost

(Continued on Page 130)

How to get a 25 per cent Greater Hatch

One of the country's greatest poultry experts announces surprising results of recent tests

Harry R. Lewis, former Professor of Poultry Husbandry, New Jersey State University, and one of the best known authorities in the country, is also a successful commercial poultryman. He uses his own flock for studying important problems of breeding, feeding, and flock management.

When Fleischmann's Pure Dry Yeast was finally put on the market, in response to a demand for a Yeast for animals, Prof. Lewis determined to see for himself just what it would do in increasing fertility and hatchability during both normal and unnatural breeding seasons.

TWO tests have been completed at Lewis Farms, Davisville, R. I., with startling results.

The first test was made during March and April, 1924. Two pens, each of 320 Single Comb White Leghorns, all the same age and quality, were used. Both pens were fed the New Jersey laying mash and scratch feed.

The only difference was that one pen was fed Yeast, according to directions, in both wet and dry mashes. Yeast feeding was started two weeks before eggs were saved for hatching.

Results Are Conclusive

Out of 9,800 eggs saved from the non-yeast fed pen, only 59.5 per cent hatched. But out of 10,300 eggs from the Yeast-fed birds, 74 per cent hatched!—conclusive proof of the value of Yeast.

But like most other poultrymen, Prof. Lewis has had difficulty in getting eggs for hatching during the fall and early winter, when production is generally low and conditions are most adverse. What would Fleischmann's Dry Yeast do under these conditions? Two pens of 300 pullets each were selected from birds hatched February 9, 1924. Both pens were put under lights October 1 and forced for egg production. The

same feeding methods were followed as before, with one pen receiving Yeast from the start.

Nearly Doubles November Hatch

Out of 600 eggs saved for hatching from the birds not receiving Yeast, only 29.3 per cent hatched. But out of 750 eggs saved from the Yeast-fed pen, 54.5 per cent hatched! This was a 25.2 per cent greater hatch from the Yeast-fed pen—almost double the hatch of the pen not fed Yeast! This showing was made even after 5 weeks of forcing, and despite the fact that it was late in November, an unnatural breeding season.

A complete report of these tests for increasing the fertility and hatchability of eggs, as carried out by Professor Lewis at his farm, has been prepared. Send for a copy of this booklet—it's free. Then try this proved new method yourself.

Fleischmann's Pure Dry Yeast comes in 1 lb. and 2½ lb. packages, 25 lb. kegs, and 100 lb. barrels. Your dealer should be able to supply you. If not, order direct from us, enclosing check, cash, or money order with the coupon below. The Fleischmann Company, 701 Washington Street, New York, N. Y.

Name.....
Address.....
Occupation..... 2A234
Reference.....

WINTER—an unusually long and steady one—is still very much with us. To the continued cold and ice has been added since the last notes were written, nearly a foot of snow. These conditions, while they do not prevent all outdoor work, keep it down to the minimum. So the cutting wood and pruning are mostly waiting.

It is a time to get the inside desk work, some of which is so necessary to intelligent farming nowadays, done. There is the census blank to fill out, and the income tax statement to make,—the latter simply to satisfy the inquisitive tax collector, for few farmers have to pay any income taxes these days.

But one of the most important things to be done now is to determine the crops and rotations and the seed and fertilizer supplies needed for the coming season. Of course on a well managed farm there are usually well established rotation plans; but it is surprising how often these have to be modified to meet seasonal vagaries, crop failures, changing prices and other factors. And with these modifications and with a varying manure supply, come necessary modifications of seeding and fertilizer application.

Just as I was thinking that I must get in my order for seed and fertilizer, came a notice of a farm bureau community meeting at which the chief speaker was to be Professor John Barron. I had almost said Farmer John Barron because he has kept in such close touch with his own farm at Nunda, and he knows farming so intimately, that he is really more of a farmer-teacher than a professor.

He was to talk on a fertility program and an alfalfa campaign. Just the thing, I said to myself! I'll go and maybe get some help with my own problems! The meeting apparently hadn't been very well advertised, for the attendance was small, but most of the men were there for definite help—and got it. I never attended a more helpful and practical discussion.

Of course acid phosphate is the basis of our fertility program, following as we do the recommendations of the college of agriculture which has made an unbiased study of the problem in the light of present conditions. He showed how acid phosphate used as a supplement to manure not only meets present requirements, but by promoting legume growth adds to the supply of nitrogen in this cheaper form and eventually increases yields permanently. We use manure on corn and bean ground and apply 200 to 300 pounds of acid per acre as a supplement. We also use 200 pounds of acid phosphate per acre on oats.

Questions and discussion brought out the necessary modifications of this policy for special crops, such as cabbage and tomatoes, and special conditions, such as lack of manure and previous treatment. These always emphasized the fact that high analysis goods, such as a 4-12-4 and 5-10-5, for example, are the best buy, because they furnish the additional elements needed at the market price with a minimum filler and in addition the ever needed acid phosphate at a relatively low price. So from Barron's recommendations and my neighbor's experiences and practice as developed in the discussion, I went home with my fertilizer program definitely formulated for the year, and with the assurance that it is up-to-date and sound. Our local agent has my order for March delivery. This meeting alone had a cash value of more than the price of my farm bureau membership, to say nothing of its educational value and the satisfaction of qualified approval.

Much the same might be said of the seeding program. I went to the meeting with my general plans and ideas in mind. I came away with some of them verified and others modified, but with all in more definite form, and with additional information which will cause me to take precautions to insure success. So that seed order has gone in, too, and this much of the season's planning is done.—M. C. Burritt.

Child Labor Amendment Killed By Vote Of Thirteen States

ACCORDING to the Associated Press, the Child Labor Amendment to the Constitution has been defeated, barring possible reconsideration, due to the fact that the proposal has been rejected in either one or both of the Houses of the Legislatures or by referendum, in thirteen states. According to the Constitution, an amendment must be ratified by three-quarters of the forty-eight states. An adverse vote in thirteen states makes this impossible. Fifteen State Legislatures have acted upon the amendment. California and Arkansas were the only states favoring the proposal. In Massachusetts the proposed Amendment was rejected by referendum last November. The Amendment was rejected by one or both Houses of the Legislatures in the following states: North Carolina, South Carolina, Georgia, Louisiana, Texas, Oklahoma, North Dakota, South Dakota, Kansas, Ohio, Washington and Delaware.

President Coolidge Puts Farm Aid Up To Congress

PRESIDENT Coolidge, in a message to Congress, has urged that body to take immediate action upon a report of the Commission on Agricultural Legislation. The main feature of this report is the recommendation that there be created a federal cooperative marketing board for the supervision of voluntary Government standardized cooperative marketing organizations. In addition to this, it is also recommended that there be a modification of the Agricultural Credits Act, a revision of the tariff for the benefit of the farmer, and the leasing of public domain for grazing and other remedial measures to benefit the farmer. The President's message expresses his desire that Congress give this report immediate action, urging that the proposed legislation be enacted before Congress adjourns March 4th.

The federal cooperative marketing board will consist of five members; the Secretary of Agriculture, the Secretary of Commerce, and three others to be appointed by the President from commodity organizations. "This board," the report says, "would be able to use all the facilities of all Government departments and interlock all problems of agriculture, both those of production and those of distribution."

League Sells and Leases Plants

AT THE last meeting of the directors of the Dairymens League Cooperative Association, the Board voted to sell or leave five of the large manufacturing plants owned by the Association. The Burke and Whitesville plants were sold to the Borden Company to take effect February 1st; the Milton, Troy, and Cooperstown plants were leased to the Borden Company to take effect February 15th.

The League announces that with the plants that were leased, provisions were made whereby the Borden Company will receive at all times all pooled milk available in the territory tributary to these locations, the League retaining the right to direct its milk wherever and

to whomever it deems advisable. Provisions were made in each lease whereby it can be cancelled on short notice. According to the terms of the leases, the League will receive a return of 6 per cent on its investment, plus 5 per cent depreciation on buildings, and 10 per cent depreciation on equipment.

Agreement Made on Dairylea Brand

According to agreement with the Borden Company also, that company agrees to market Dairylea milk for the Association and to pay therefor a license fee. The company agrees to maintain Dairylea markets within a specified territory, during the terms of the lease and at the end of the lease must turn back to the Association the brand name Dairylea and the markets agreed upon. This trade name still remains the property of the League.

This arrangement, the League announces, will mean the elimination of the entire selling and advertising departments of the organization, which should result in a big saving in expenses. The manufacturing plants have also been a steady loss under League management, and the ceasing of these operations should help to reduce expenses.

The organization states that getting rid of these manufacturing plants, together with securing control of larger outlets for fluid milk through the purchase of Clover Farms and Evans Dairy means the actual beginning of the solving of the League's surplus problem and an increase in the sale of League milk for Class 1 price.

Reviewing the Latest Eastern Markets

MILK PRICES

THE Dairymen's League Cooperative Association announces the following prices that dealers will pay the League during the month of February for milk testing 3% in the basic zone of 201 to 210 miles from New York City. It is to be understood, of course, that the prices mentioned below are not received by the farmer, but go into the pool. They represent the prices dealers pay to the League.

Class 1 Fluid milk	\$3.07
Class 2A Fluid Cream	2.20
Class 2B Ice cream	2.25
Class 2C Soft cheese	2.15
Class 3A Evaporated whole milk	
Cond. whole milk	1.90
Class 3B Whole milk powder	1.85
Class 3C Hard cheese other than American	1.65

Class 4 prices will be based on butter and American cheese quotations on the New York market.

Sheffield Producers

The Sheffield Farms Producers announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$3.07
Class 2	2.20
Class 3	1.75

Class 4 prices determined by butter and cheese quotations on the New York market.

Non Pool Cooperative

The Non-Pooling Dairymen's Cooperative announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$2.80
Class 2	2.20
Class 3A	1.80
Class 3B	1.75

Interstate Producers

The New York State Milk Producers Association (Philadelphia Price Plan), announce the receiving station prices or the price to the farmer in the 201 to 210-mile zone from Philadelphia for 3% milk is \$2.19. In the 101 to 110 mile-zone, the price is \$2.29.

NO CHANGE IN BUTTER

There is little or no change in the butter market from what it was last week. At the close of the week ending January 24 there was a hopeful feeling that something better was ahead, in view of the fact that fresh receipts were considerably below expectations. This would

Color Your Butter

"Dandelion Butter Color" Gives That Golden June Shade which Brings Top Prices

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade. "Dandelion Butter Color" is purely vegetable, harmless, and meets all State and

National food laws. Used for 50 years by all large creameries. Doesn't color butter-milk. Tasteless. Large bottles cost only 35 cents at drug or grocery stores. Write for free sample bottle.

have made it possible to clear some of the accumulations. Things were looking upward. On Tuesday, the 27th, posting of receipts showed slightly over 17,000 tubs, which as the Price Current put it, "took a little starch out of the market." It had the effect of checking any speculative buying and caused a more conservative feeling among other classes.

There has been considerable buying on the part of chain stores and receivers have lost no opportunity to sell. They have not made any concession in price, but, nevertheless, it is a buyer's market.

Creameries scoring higher than extras are worth from 38½c to 39c, while 92 score goods are bringing from 37¾c to 38c. Creamery firsts (90 to 91 score) are quoted from 37c to 37½c, while 88 to 89 score are worth 36c to 36½c. The balance of the market on lower grades runs from 33c to 35½c.

CHEESE TRADING FAIR

The cheese market is holding its own. It is still maintaining its firm tone, denoting confidence in the situation. Not a whole lot of excitement is noticeable, but trade is fair. In short, things are quiet, but moving right along steadily. Prices are the same as they were the last week. Fancy held whole milk state flats are still bringing from 25½c to 26c, while average run goods are worth from 24c to 25c. Held under-grades are bringing from 19c to 22c. These prices are the same on both white and colored goods. Prices in the west are still above a parity with New York City on held goods.

EGG PRICES SUFFER SLUMP

The sensitive condition that we called attention to during the last few weeks made itself quite evident during the week closing January 24, when prices took a decided slump. As a matter of fact the market began to break on the 22nd, but it did not reach its full force until the following week. It was due to a combination that always ends the same. Receipts have been increasing from southern and western points, and inasmuch as retail prices have been held at a fairly high level, consumption has not been as it should be. A decline in price is bound to follow these conditions. Another thing that has been working against nearby eggs is the market on Pacific Coast whites. Bidding at the auctions has not been up to standard, and when buyers can get Pacific Coast whites at 60c, we cannot expect a much higher price for nearby whites.

Inasmuch as the market is getting all of the eggs it wants it is very doubtful if we will see and sustained advance in the egg market any more this season. We are now coming into our spring production. There is no question but when hens are beginning to respond, as is evidenced by the heavier receipts.

As has been true of the past several weeks, fancy brown eggs are meeting good demand. In fact fancy brown eggs at this writing, January 29, are worth 63c, compared to 62c for the fanciest nearby hennerly whites. Those grades of whites below the fanciest, vary anywhere from 58c to 61c. Nearby gathered whites are worth from 57c to 58c, while pullets are worth from 55c to 56c. Fancy nearby hennerly browns are worth 62 to 63c, while gathered goods are bringing anywhere from 55c to 61c.

LIVE POULTRY WANTED

The strong tone in the live poultry market that was reported last week has continued. As a matter of fact, the situation has become more acute and there is a real shortage of live poultry. In face of the situation the trade has foregone the practice of charging premiums for extra fancy marks, which practice has been ruled out for the duration of the embargo. Fancy yellow skinned, smooth legged fowls are worth 36c to 38c. If stock is at all fancy it will bring 38c readily. Leghorn fowls are worth from 33c to 35c. This is about 10c better than Leghorns were able to bring a few weeks ago. Fancy smooth legged colored chickens are worth from 35c to 38c, while average run chickens are bringing 32c.

The Long Island duck growers have been shooting in spring ducks rather free-

ly and prices have been reduced to 35c to widen every possible outlet. It will be seen that when consumers can buy Long Island spring ducks for 35c, they are going to think twice before they are going to pay 38c for a fowl. However, when we take into consideration that the Long Island men are only shipping in about 600 ducks a day, it doesn't mean a great deal in a city of 4 or 5 millions.

Rabbits have also taken a firmer tone in view of conditions in the poultry trade and have advanced to 30c to 35c a pound. It is hard to make any prediction in rabbits, the market is up and down like a jumping jack. One day it is high, and in a day or so it will be just the opposite. Shipments are so irregular that it is impossible to say what may or may not happen.

Special Notice to Express Shippers

State quarantine regulations prohibit the return to country points of any live poultry crates that have been shipped to New York City. This is being enforced rigidly. Every day sees large numbers of coops destroyed, while some receivers are piling hundreds of crates high along the street or in the lofts of West Washington market. In order to avoid any further losses, shippers are urged to use one way coops exclusively, as there is little likelihood of any change in present regulations in the near future. In other words, do not ship stock in fancy crates, but use make-shift equipment that does not cost you too much.

NO PEP TO POTATOES

Contrary to expectations, the potato market in New York City still shows no pep. New York City has had a considerable spell of weather during the past few weeks, and in view of the fact that the city has only been receiving about two-thirds as many potatoes as normally, it was expected that there would be something stirring, but such is not the case. One thing is quite true and that is there is no peddler trade to speak of. Lots of time when crops are heavy, as is the case with potatoes this year, peddler trade is used to float lots of the stuff out. But with so much snow and bad going, peddlers have been few and far between. The only exception in the market is in the case of Maines. They have boosted their asking price to \$1.40 a hundred bulk delivered in New York City, and \$2.35 to \$2.40 for potatoes in 150 pound sacks delivered in Harlem. The city prices are below these figures. States are anywhere from \$1.15 to \$1.25 delivered. Farmers down on the East End of Long Island are getting anywhere from \$2.25 to \$2.30 F. O. B. loading points. It is funny just how the potato market is going. Arrivals are certainly not too heavy. It looks as though the housewives in the city are not using as many potatoes as is their custom. Something is certainly radically wrong.

BEAN MARKET QUIET

After the sudden snap upward in the bean market, things have again quieted down on most varieties. The undertone and general sentiment in the market seems to be firm, although values have not changed at all. In fact, pea beans have weakened a little on the fancier marks. Last week pea beans were worth from \$7 to \$7.25. They are pretty weak at \$7.25, and common goods can be bought at \$6.75. Red kidneys are still holding their strong position, bringing from \$10 for common goods, up to \$11.50 for fancy marks. White kidneys are dull, although the feeling in the market may be said to be steady. As a matter of fact in some quarters a little better price is being paid for white kidneys. Last week's quotations were marked by a range of \$9 to \$9.50, while this week values run from \$9.25 to \$9.75. For some reason or other the white kidney market is not very popular, and trading has not been at all exciting. Marrows are just the same, bringing from \$9 for common stuff to \$10.25 for choice bags.

CABBAGE NO HIGHER

The cabbage market stays just the same that it has been for the past week or so. Country prices are still around \$17 or \$18 F. O. B. At least those are asking prices. A lot of fellows in the city are offering \$15, but there are not many confirmations at that figure. There is little likelihood of prices going beyond this point in the near future, because there seems to be plenty of cabbage to be had at the prices quoted.

Make Your Roofs Last a Lifetime!

Positively that! The wonderful Seal-Tite method renews, preserves, and makes your old, wornout roofs watertight. One application lasts 10 years. Write today for this great money-saving roofing offer.

NO Money Asked

We send you everything you need to stop all roof leaks without asking you to send a single penny. No C.O.D. No notes. Pay four months later if our material proves to be exactly as represented.

What Shall We Do About The League?

(Continued from Page 124)

experience some part of a new program under which everybody can work for solving our marketing difficulties.

If Directors Do Not Please You, Why Not Change Them?

THIRD: Study your laws and by-laws, and all of the facts available regarding your organization, be sure you attend your meetings and if you are not satisfied with what your directors are doing for you, do not be stampeded into voting for them. Perhaps some new blood in your leadership is one thing that is needed. But let us be fair about it. You certainly have no right to stay home and grumble about things, or about the officers, if you have made no real effort to acquaint yourself with the facts, and particularly if you have not attended the meetings.

The League has been criticized for being a centralized organization. Some centralization of authority is necessary to the success of any organization and anyway, members have not begun to use a tenth part of the local power they have in their organization to bring about changes in officers and policies. Until this local power, which you already have, is used, the responsibility for lack of success rest squarely on the membership and there is little sense in hollering for more local control.

Stop the Dual Capacity Policy.

FOURTH: Demand that your directors stop serving in a double capacity, that of officer and employee. I have attended many meetings of the Board of Directors. I know that they have their ears close to the ground listening to public sentiment in their own districts. I know that if at your next local and county meetings you introduce a resolution demanding that when a director becomes an employee he resign as a director, such demand will be quickly heeded. I repeat to you very seriously that I know of no one action that will benefit your organization more than this. AND AGAIN I SAY IT IS YOUR RESPONSIBILITY.

Demand Information.

FIFTH: Pass resolutions in your local and county meetings demanding the written facts with details regarding policies and work of your organization, and let this information include a detailed yet simple accounting of money spent or invested in salaries, milk plants or other property and of moneys received in the sale or rental of the same. I think that such moneys have been well handled by the directors. My only point is, it is your right to know how they were handled. Do not be put off by the excuse that publication of these facts puts information into the hands of the enemies of the organization. The enemies get most of the information anyway, and you do not. Again it is your responsibility. You will not get this information until you demand it.

Demand Needed Modification.

SIXTH: Let your directors understand that you are in favor of modification of policies and details which do not affect fundamental principles when time and experience show that some of the policies and details inaugurated when the Cooperative Association was organized have proved themselves impractical. Some modifications of the contract, for instance, would not have greatly impaired the efficiency of organization and would have made it possible to bring in a larger number of dairymen. When a pioneer is blazing a trail and finds one path impenetrable, he must back up a little and turn a little sideways to get around the impossible barrier.

Better Times Ahead.

SEVENTH: Let us have a little more patience and charity. Cooperation never will be any panacea. No organization can bring about a millenium nor save a man from his own bad farming. Progress through all history has been discouragingly slow. We have a great problem to solve in

this battle for better markets and the most that we can hope for its a step at a time. Let us not expect the impossible.

Let me say in conclusion that the future of dairying for the real dairyman in this Eastern territory was never brighter than it is right now. We have the greatest market in the world for fluid milk within practical shipping distance. Population and resulting consumption are increasing by leaps and bounds. On the other hand, four thousand cows a month are being condemned and killed in New York State because of bovine tuberculosis. Conditions are such that the marginal dairymen, those men who pay no attention to putting their business on a practical basis, are being rapidly weeded out.

With the coming of better dairying times, and with the added experience which we are gaining all of the time, our different marketing organizations are going to improve, and the Eastern dairymen can therefore look forward to slowly but surely improving returns from their business, resulting in a higher standard of life and more happiness for themselves and their families.

How I Bought My Bull

(Continued from Page 123)

tremendously impressed by a group of heifers in one end of his barn. Upon inquiring I learned that they were the daughters of TOYON GALAXY MODEL SEGIS. I asked to see the sire of these heifers and inquired if he was for sale. The herdsman informed me that he was due to the fact that they had a month before bought another bull to keep from inbreeding on the daughters of TOYON GALAXY MODEL SEGIS. I was so taken with the daughters of this bull that I made them bid for him.

Daughters a Uniform Lot

Next day I returned and learned that Fred Pabst Stock Farms owned several daughters of TOYON GALAXY MODEL SEGIS. I visited this remarkable establishment and looked over these heifers. Here again I was surprised to find a very uniform type lot of heifers. Every one of them had a well shaped udder, good top line, and gave promise of becoming a big producer at maturity. Here also I learned that TOYON GALAXY MODEL SEGIS had only eight tested daughters which were as follows:

	Milk	Butter
Lady Milky Aaggie Pontiac		
2nd, 2y	431.9	22.25
Royal Princess Donnybrook, 2y	431.0	22.24
Ormsby Donnybrook Segis 2d, 2y	410.7	22.21
Caary Oak De Kol Pontiac		
2d, 2y	396.2	22.16
Lady Greenback Hengerveld		
2d, 2½	370.2	20.08
Nooksack Lunde Model, 2y	413.0	19.88
Lady Boerinhurst Pontiac		
2d, 2y	445.5	19.50
Lilith Pontiac Longfield		
2d, 2y	393.0	18.79

At seven days these eight daughters average 411 lbs. of milk and 20.90 lbs. of butter.

TOYON GALAXY MODEL SEGIS will only be five years old this coming March, and therefore none of his daughters are old enough to have completed yearly records. I therefore had to be satisfied in judging their production by their seven-day work. However, after actually seeing his daughters and learning that among the eight there wasn't a single poor producer and that everyone had proven to be considerably above the average, I decided to purchase him.

Considering all these facts, I decided that I had found the bull I had been looking for and I went back, called at Mr. Dickinson's and arranged for the purchase of TOYON GALAXY MODEL SEGIS and two of his daughters. I thought it would be wise to take these two heifers with me in order that I could show to visitors just the kind of "get" that "Toyon" produces.

How to Use Honey in the Radiator

A SUBSCRIBER writes us regarding the use of a mixture of honey and water as an anti-freeze solution for cars and trucks. He states that he left a can of a mixture of half honey and half water out overnight and that it froze at a temperature only a little below zero, and states that in his opinion such a mixture would be decidedly dangerous. Most of our subscribers who have tried honey as an anti-freeze have used a 50-50 solution satisfactorily, although I have noted that one agricultural experiment station recommends a solution of 71 per cent. honey and 29 per cent. water as being safe. Recently I mixed up several cans of different strength to see just what they would do. At about 8 or 10 degrees below zero, the 50-50 solution froze into a mushy ice and at 20 below zero, one could still poke his finger into the ice, so that I do not believe there would be much danger in using the 50-50 solution. The 71-29 solution showed only traces of freezing at 20 below.

Honey Does Not Evaporate

Prof. Shane of Iowa State College ran some tests on the honey mixture last year and is now conducting further research along this line. He says that the honey mixture may be used with perfect safety, providing the solution is not weaker than half and half, honey and water, by volume. Professor Shane's present study is being made on the use of honey mixture in cars operated under ordinary conditions by their owners.

Altho the honey mixture will freeze at a few degrees below zero, no harm will be done to the cooling system, for when the honey mixture freezes it takes on the consistency of ice cream and is yielding in character. An advantage which honey has over alcohol is that when evaporation takes place with a honey mixture, the water passes off, leaving the honey; whereas alcohol evaporates before water.

In very cold weather, the engine must be allowed to heat before starting out, because the honey mixture will not circulate until it becomes warm. Also there appears to be a strong tendency for honey to leak, especially around the pump stuffing boxes. It has been observed in one instance that repeated overheating of the engine caused candy-like deposits in the radiator. However, these were removed by washing with a hose.

How It Is Prepared

The honey anti-freeze mixture is prepared by boiling honey and water, in equal amounts by volume, for a few minutes and then skimming off the resulting scum. The specific gravity of such a mixture should be about 1.220. While Professor Shane is not ready to say that this solution will prove altogether satisfactory, he is convinced that no damage will result to the car by freezing. The honey mixture should be drained off immediately after danger of freezing is past in the spring because it is possible that in warm weather the sugar in the honey may decompose to form acetic acid which attacks the metal of the cooling system.—I. W. Dickerson.

Cold And Lubrication

BEFORE starting out on a cold morning it is a wise precaution to first allow the engine of the farm car or truck to become thoroughly warm. Throw a blanket over the radiator or pull down the hood cover, allowing the engine to idle until the radiator is well warmed. This gives all the metal parts a chance to warm up and also puts the oil in condition to circulate. Otherwise, if you start out with a cold engine the oil is more or less stiff, in which condition it may not be able to properly lubricate bearings, and then damage and loss is an almost certain result.

sult. The little extra time warming up takes will be more than regained in increased efficiency and savings in wear and tear.—"Ed. Henry."

Wet Leather Burns More Readily Than Dry

WET leather is damaged much more readily by heat than dry leather, says the Bureau of Chemistry, United States Department of Agriculture. But it is hard to get the average user of leather to keep this in mind, and as a consequence much leather is damaged by being subjected to high temperatures when damp.

That using such damaged leather may endanger life at times was shown recently by a specimen sent to the Bureau of Chemistry. This specimen was a lineman's leather safety strap which, though nearly new, was broken almost in two as a result of burning. Such straps are used by telephone and telegraph line men as supports while working in mid-air. Originally this particular strap had been strong enough to hold a team of horses, but its strength had been reduced to less than that of a piece of ordinary string. It is probable that the strap was damaged when the wearer unwittingly leaned against a hot steam pipe.

How Shoes Are Often Ruined

This example shows rather emphatically how important it is to take good care of leather. Even in cases where no danger may result it pays to give leather good treatment. A great many pairs of shoes are ruined when the wearers put the wet soles against hot stoves or radiators or on the heater which feels so comfortable under the street car seat on rainy or slushy days. Frequently the burned spots will fall out and the shoe manufacturer get the blame.

Leather service may be increased by remembering the simple fact that wet leather is more easily damaged by heat than dry leather.

Riverside Tires

OVERSIZE CORD

You cannot buy a better tire than a Riverside Cord. So why pay more?

That is what thousands of customers tell us. For quality, length of service, for protection against skidding, for size and strong construction, Riverside Cords equal tires even at one-third higher cost. Then why pay an extra price?

Here are the facts

The quality—service giving quality—of Riverside Cords, and the big saving in price, have made Ward's the largest retailers of tires in the world! We sell from 5,000 to 6,000 tires a day to men just like yourself. Many of them to men who have used Riverside Cords for years.

Built-in Quality

"Quality First." Look at the tire. The big heavy blocks of live rubber in the center, the extra thick side studs and the husky ribs give long mileage. They grab the wet roads and help prevent skidding. Riversides have a national reputation for quality. To this we have added a reputation as the "Safety Tire."

"I have 4 Riverside Tires on my car. They have given me better service than any other tire I have ever used, and I have used 7 different kinds." Rev. Willis R. Booth, Henryville, Ind.

"Two Riverside tires and heavy duty tubes have worn out two sets of more expensive tires used on the other side of the same car. I recommend everyone to use Riversides." W. R. Hays, Nashville, Tenn.

"I have had Riverside Tires on my car for 4 months and never had any air put in or any tire trouble and they show no wear." Fred Basenberg, Cullman, Ala.

Put a Witte on Your Place for Only \$5.69

Now Easier Than Ever to Own a Witte Throttling Governor Engine.

The Famous Standard Witte Can Be Had Now for Only \$5.69 a Month —Low Price Sets Record.

With the need for cheap, dependable power more pressing than ever before, farmers everywhere will be glad to learn of the new low-price plan just announced by Ed H. Witte, world-famous engine manufacturer for 42 years.

Now only \$5.69 a month for a short time buys the standard Witte Throttling Governor Engine, fully equipped with the celebrated waterproof WICO Magneto. In spite of this low price, which sets a record, the engine has nearly 40 new improvements, including a new device that makes starting easy at even 40 degrees below zero.

Long regarded as the cheapest and most dependable farm engine built, the WITTE develops 50% extra power on either kerosene, gasoline, distillate or gas. Operation on full load figures under 2c an hour. Trouble-proof and so simple that the women folks can operate it. Easily moved from job to job. More than 150,000 WITTES are in daily use.

To introduce this remarkable engine to a million new users, Mr. Witte will send it anywhere, direct from factory, for a guaranteed 90-day test.

Every reader of this paper who is interested in doing all jobs by engine power should write today for a free copy of a remarkable new, illustrated book just issued by Mr. Witte, which explains the engine fully. You are under no obligations by writing. Just send your name, a postcard will do, to the Witte Engine Works, 1807 Witte Bldg., Kansas City, Mo., or 1807 Empire Bldg., Pittsburgh, Pa., and receive this interesting and valuable book that gives you valuable information about the application of engine power on your farm.

Fastest, Cheapest Way to Clear Land

At a contest held recently in England, Hercules all-steel triple power stump puller pulled stumps faster than any other method. Quick work—low cost and one man does the job. Hand power in four speeds, single, double, triple and quadruple power. Easy to pull—quick winding cable, and other features. **Horse Power Hercules** is most complete, up-to-the-minute stump pulling outfit made. Write for prices and catalog—get my 1925 introductory offer.

Did Your Hens Go to Roost?

(Continued from Page 125)

in the evening, it takes her a lot more than two minutes to make up her mind to make the final jump. She will hang around in front of the roosts, pick here, pick there, scratch a couple of times, take a drink of water, and then do a little preening. In other words, she takes her time about it.

So I made up my mind I was going to see for myself whether there really was anything to the story. I went over home to get information first hand, trying it on my Dad's hens. About 8:45 the moon had started to bite into the sun. At that time daylight was still perfect and the hens were busy in the litter.

Radio More Interesting

The progress of the moon across the front of the sun was slow, so we went in the house and "tuned in" on the radio and got WJZ. Here was a thrill. Major Gardner was on the air, telling the radio audience to stand by, that Major Hensley was up in one of the army airplanes over New York City, making preparations to broadcast his impressions of the eclipse from the air. We stood by. In about a minute we heard the all-fired racket in the radio you could imagine. We heard a voice. It sounded like a man trying to make himself heard above the roar of a threshing machine. That test was not so good. We could hear him count 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, but that was all. He went off the air and Gardner at WJZ came back. He didn't have to tell us that Hensley's first attempt was poor, but he told Hensley to adjust his modulator and try again.

"Some Age, This"

At the second attempt everything was fine. "Hello, WJZ! Hello, WJZ!" said Hensley. "I hope you can hear me now. I am up about six thousand feet over Central Park, flying north at the rate of 102 miles an hour." Think of it. There we were in a Long Island farmhouse, listening to a man a mile in the air, flying at the rate of 102 miles an hour, talking to us mortals on earth. Some age, this!

In a moment or so Hensley went off the air again to find out how successful he had been. Gardner told him how good it was and asked him to come back on again. "Hello, WJZ," Hensley replied. "I am still over 6,000 feet high, making the same speed. It is 12 below zero up here. We are now over Mt. Vernon." It began to get a little dusky outside and we gave up the idea of holding on to Hensley. We grabbed our smoked glasses and hustled outside to see the sight. There was a very little bit of the sun left. A peculiar light had replaced the bright sunshine. It was not the same as evening. There was something like a ghostly palor to it. Then all of a sudden, as though a curtain fell, the sun was gone and the beautiful corona and three stars were as clear as a bell. Totality was upon us, a truly remarkable experience. It seemed as if the moon had jumped into place.

To Come Back to the Hens

But I started to talk about hens. We had almost forgotten them, but luckily it was called to our mind just as totality was upon us. Dad and I made for the hen-house. There were the hens under the roost, not on it. They evidently knew something was up. They had given up scratching in the litter and had retreated to the rear of the house. In fact, one had jumped up on the dropping boards. I don't think much of that hen. She wants to retire to quickly to suit me. The folks will do well to fricasee her soon.

Dad doesn't keep any roosters, but we could hear the neighbors' roosters crowing as twilight came on. It reminded me of day break. But the period of total eclipse was only a matter of something like a minute in our section of Long Island. Almost before we knew it, the shadow had sped on its way. They say it travels at the rate of something like 50 miles a minute, which is considerable speed, even in these days when men fly in airplanes over

a mile up in the air faster than a hundred miles an hour and at the same time talk to mortals on earth as plainly as you converse at the dinner table.

The Eclipse Was Too Brief

But to come back to the hens again. They had just retreated under the front of the dropping boards, when out came the sun. In a moment it was again as bright as midday and they went back to work. No doubt they thought some one was trying to be funny.

Did anyone else watch the hens? Let us hear about it if you did. Did they really go to roost, or did they merely beat a temporary retreat? No doubt most folks did what we almost did. They can not be blamed, inasmuch as a total eclipse comes only once in a hundred years or so. Above all, let's stick to facts—no fiction—no "two eggs a day" story. Some marine may believe that. Personally, I doubt if many hens got up on the roost, except those that go to bed early out of habit. Those early roosters usually make the most profitable pot-pies.—FRED W. OHM.

Buy Baby Chicks From Tested Hens

LAST spring a friend of mine, bought 200 purebred baby chicks. Within a month, white diarrhea had killed off all but 32 of them. Other farmers in the locality who had gotten chicks from the same source suffered the same experience and in one or two cases the mortality was still greater. All this meant a considerable loss, not alone in the cost of the chicks that died, but also in the labor spent in caring for them. Moreover, the next batch of chicks, ordered from another source, were a month longer in getting into laying than those that were left of the first batch.

It may be said here that the farmer who sold the diseased chicks did not know he was doing so. He did not know his hens were infected with white diarrhea and, even though he had known, he probably did not know that there was such a thing as a blood test by which infected fowls can be detected. The man from whom the second batch of chicks was ordered did know and his hens had been properly tested, consequently the second batch came out with flying colors.

Transmitted From Hen Through Egg

White diarrhea, which exacts an enormous toll of the baby chicks population each year, is the only poultry disease that can be transmitted from the hen to the offspring. Now that a blood test will detect infected hens, it is very likely that some time in the future, and it may be soon, all those who sell baby chicks shall be required to show that their flocks are free from the dreaded disease.

Hereafter, those who wish to purchase baby chicks should make it a point to learn first whether a breeder's flock has been tested. There is now no more excuse for buying chicks blindly. And those farmers who wish to add a little to their income by selling chicks should have the foresight to have their hens tested and to sell chicks only from those that fail to react to the test. It is nothing more than sound business sense to do so, and it will lay a solid foundation for an increasing business in this line.

Any state agricultural college will make the test, and the expense attached to it will be slight.

Poultry Embargo Amended: Baby Chicks Free To Move

CLARK'S HATCHERY, Dept. M, East Hartford, Ct.

and Market. The amendment to the original embargo is as follows:

The movement of live chickens, roosters, capons, hens, ducks, geese, turkeys, pigeons and guinea fowl from the States of Missouri, Kansas, Illinois, Indiana, Iowa, Nebraska, North Dakota, South Dakota, Ohio, Pennsylvania, New Jersey, Connecticut and Wisconsin, into or through the State of New York is hereby prohibited except as hereinafter provided.

Baby chicks in NEW CONTAINERS may be moved into or through the State of New York.

Chickens, roosters, capons, hens, ducks, geese, turkeys, pigeons and guinea fowl when consigned in new coops or crates may be moved into or through the State of New York for exhibition, breeding or raising purposes if accompanied by a certificate from an approved veterinarian showing said fowls and the flock from which they originated to be free from contagious or infectious disease or exposure to such diseases.

Chickens, roosters, capons, hens, ducks, geese, turkeys, pigeons and guinea fowl may be moved from the City of New York intrastate if accompanied by a permit issued by a duly authorized representative of the Department of Farms and Markets.

No person, firm, corporation or common carrier shall accept or transport used poultry coops, crates, or other containers for intrastate shipment in New York unless said crates, coops or other containers have been thoroughly cleaned and disinfected. When such coops, crates or other containers are shipped from the City of New York same must be cleaned and disinfected under the supervision of a representative of the United States Bureau of Animal Industry and bear tag certifying such cleaning and disinfecting.

No person, firm, corporation or common carrier shall accept or transport into the State of New York, any consignment of poultry which has been unloaded, re-loaded or partially loaded at any point within the quarantined States above mentioned.

Much concern has been expressed by both hatcheries and buyers of baby chicks relative to the embargo. From the foregoing it will be seen that baby chicks may be shipped into and through New York State. The International Baby Chick Association took up the question with the post office department and Third Assistant Postmaster Glover wired C. A. Norman of Knoxville, Tenn., as follows:

Veterinarian Bahnsen was advised January ten there is no provision law under which baby chicks can be refused acceptance for mailing or intercepted while in the mails or withheld from delivery to the addressees under any State quarantine order.

Sidelights on the Madison Square Poultry Show

THE old Madison Square Garden housed for the last time in its eventful history the great Annual Poultry Show. We can hardly say that this show came and went in a blaze of glory. In our humble minds the 1924 show was a great deal better than this year's. It was a bigger show. Those departments other than poultry were much stronger, such as pet stock departments, including rabbits, guinea pigs and pigeons. The latter were much in the minority.

If you can imagine an orchestra of about 2,000 pieces, including violins, clarinets, flutes, piccolos, base violins, etc., all tuning up at the same time, then you can imagine just about what the Madison Square Garden Show sounded like. At one time it was so noisy we had difficulty in thinking, but then there are those who say we don't think much under ideal conditions. It is remarkable how much noise a bunch of birds can produce from the high-pitched, shrill, defiant crow of the game cock to the deep, hoarse crow of the giant Brahmas.

The exhibits of incubators were not quite as extensive as in former years.

STRICKLER'S TANGRED-BARRON

S. C. White Leghorn Baby Chicks

Jamesway and Drew Line were there in full force exhibiting their poultry equipment. Outside of these houses and a few poultry supply houses who handle all kinds of poultry appliances, there was little of the large appliances on exhibit.

When writing advertisers Be sure to say that you saw it in AMERICAN AGRICULTURIST

The Trouble Maker—By E. R. Eastman

THE judge hesitated, looked at the eight stern faces of the farmers who had somehow closed in around him, thought of that silent mass outside, and he knew that Winslow had spoken the truth. As long as he could deal with men individually, he knew that he could handle them to his own purposes. But when their common need had driven them so far that hundreds of them, representing the voting power of the county, stood as a unit in a mass before his house, he realized that his power was broken. At any rate, he was enough of a politician to know that this was no time for further opposition.

Without a word, he dropped into a chair by his desk, pulled some legal forms to him, wrote briefly, signed his name, and handed the paper to Winslow. The lawyer read it, smiled, nodded to the men and led the way from the room.

Outside, Winslow and his group moved down the edge of the crowd toward the end of the street.

"Come on, boys," he shouted. "Everything is all right. Let's go get Taylor."

For the second time that night a mob—but this time a fairly orderly one—marched toward the county jail, down Whig Street, across Water, and up Main they went, until again they packed the street in front of the jail.

Dave Messenger, spending an uneasy evening watching the front of his jail from a window, saw them come.

"There they are again! By cripes, just as I expected. If it had been in Arizona now, they'd have gone home and to bed when I called their bluff. But in this nice, quiet, cow country—"

He was interrupted by loud pounding on the jail door.

Going to the door, he undid the fastenings quietly and swung it back so quickly that Winslow, just leaning forward to pound the door again, lost his balance and nearly fell on the little sheriff. When he recovered, Messenger was smiling at him back of a very businesslike looking "forty-five."

"Be a good boy, Dave, and put it up," smiled Winslow. "Never can tell about those things; might go off and hurt somebody."

"Might at that," agreed the sheriff grimly. "What do you want? Ain't you fellows ever goin' to get settled down?"

"We want Taylor, that's what we want," shouted a man near enough to the door to hear the question.

"Yes, Dave," said Winslow, "we want Taylor, but in the regular way. Here's an order from Judge Rising for his release."

The sheriff took the paper and went over to a lamp where he could see better, and read it carefully.

"Thank God!" he said fervently. "Now mebbe I can get a little rest. Wait here a minute."

In a few minutes he came back with Jim.

"Here he is," he said to Winslow. "Take him and welcome. Don't know when I've been more pleased to get rid of anything."

Then to Taylor: "I like you, Jim, but I'll be gosh-blinded if I like you as a guest. Get more rest with the measles! Don't ever invite yourself here again, least not while I'm sheriff. You've got too many nice, quiet, peaceable friends."

The appearance of Taylor in the doorway of the jail was all the younger element in the crowd needed. With a whoop they gathered him unto themselves, while another bunch grabbed the lawyer. With the men hoisted high on their shoulders, they began a shouting, triumphant march up and down the streets of the quiet old country town. As they marched, they sang, and the refrain of their song went some-

"We'll hang Judge Rising to a sour apple tree,
We'll hang John Ball to a sour apple tree,
We'll hang all scabs to a sour apple tree,
As we go marching on."

Judge Rising heard the hullabaloo and scowled; lawyer Winslow, carefully hanging onto his silk hat as he was carried along, heard it and smiled.

Dave Messenger, the little sheriff, undressing for bed, heard it and growled:

"Nice people; nice, quiet people!"

CHAPTER XIX

ON the following morning, Bill Mead drove the cows in from the night pasture on the Ball farm, and fastened them in the stanchions. Then he and John Ball got their pails and stools and began the morning milking. It was plain that something was on Bill's mind. He milked with first one hand and then the other,

What Has Happened in the Story So Far

Will Judge Rising sign Jim's release? The young farmer, leader of the striking dairymen, has been arrested for violence in which he had no part, and the corrupt judge refuses bail. Led by Jim's lawyer, a Yankee named Winslow, an angry but orderly crowd of sympathizers marched to the Judge's home and demanded justice for their leader. At first Rising refuses, but a glimpse of the mass of determined men causes him to waver. Winslow demands that he sign the paper then and there.

never both at the same time, and when a cow swished him in the eye or stepped on his foot, he cursed her only in a half-hearted absent-minded manner. Ball did not seem to be conversationally inclined, and Bill saw no chance for an opening. When he went up by Ball to strain his milk, the old man paid no attention to him, but kept head and beard buried in the flank of his cow.

"Always was a darned old crank before breakfast," muttered Bill. "Wurs'n ever lately."

"What's that you're sayin' William?"

"I—I—I was just remarkin' that I have to fix the crank on that old grindstone. Gettin' wurs'n ever lately."

"Narrer escape! Gettin' so a man can't think out loud without gettin' jumped on. Goin' to quit this durned hired man's job anyway. Going to town and get a real job!"

After the milking was done, they went into breakfast. But there was little said until the meal was pretty well started.

Finally, Mrs. Ball broke the silence.

"Heard the news, John?"

Bill Mead suddenly stopped, a half of a pancake dripping with maple syrup held in mid-air, to hear John Ball's answer.

"Just what I've been tryin' to ask Johnny all the mornin'," he thought, "and now the old lady had to beat me to it."

"No answered John Ball. "I ain't. Gettin' tired of news. No news is good news. What's up now?"

"Caroline Hicks phoned a little while ago that there was a terrible time in Speedtown last night. Said there were thousands of men there and that they marched up and down the streets, finally went to the jail, and got Jim Taylor out. Said they were all pretty mad 'cause you got Jim in jail."

Ball's breakfast was spoiled.

"I'll sell every one of my cows before I give in," he stormed.

"Oh, John, do be reasonable," said his wife. "We don't want to get all of the folks down on us. Let's keep the milk at home and not have any more trouble."

"Tain't me that's makin' the trouble. I'm no trouble maker. This thing's a matter of principle."

The old man brought his fist down on the table so that all of the dishes jumped.

"My milk is goin' to the factory if the

whole dum country stands in the road!" He got up, forgetting even to fill his pipe—something that had not happened before since Mrs. Ball could remember—and went directly to the telephone.

* * * *

IN his little bedroom in the residence part of the jail, Dave Messenger lay peacefully sleeping.

Ring-a-ding-ding! went the old-fashioned telephone on the wall. The sheriff grunted and turned over.

Ring-a-ding-ding!

He grunted again, and buried his head in the pillows.

Ring-a-ding-ding! Ring-a-ding-ding!

With a sound of something between a grunt, a sigh, and a curse, the sheriff swung skinny bare legs to the floor and sat on the edge of the bed rubbing his eyes.

"No use tryin' to rest. Late nights and early mornings; early morning and late nights. Drive a feller out so early he meets hisself goin' to bed! When do these

as though even if you cannot stop this nonsense for my sake, you could do it for hers."

John Ball said nothing, but went right on pulling the full cans of milk out of the ice water in the tank.

"You claim you want Mother and me to be happy," went on the girl, "yet you're fixing it so that neither Mother nor I can ever hold up our heads in this neighborhood again."

The old man turned around and sat down suddenly on a can of milk.

"I suppose you'd be proud of me if I was a coward and gave up fightin' for my rights."

"You're always talking about your rights, father. But other folks have some rights, too. Mother and I have some; these neighbors think they have some when they try to get more money for their milk."

This was too much for John Ball's over-worked temper. He straightened up to shake a finger in Dorothy's face.

"By 'neighbors' you mean that Taylor hoodlum up the road. Should think you'd stick up for him after all he's done to us!"

"Never thought of him at all," flared the girl.

"Yes, you did. You think of him all the time. And you think more of him than you do of your own father! Tell you one thing though, young woman, I ain't done with this Taylor business yet. Mebbe he did get out of jail last night, but he's got a trial comin', and I'll send him where he won't make no more trouble for a spell, if its the last thing I ever do!"

CHAPTER XX

DOROTHY stood looking at her father for a moment, while the great round tears welled up in her eyes and rolled slowly down her chalk-white cheeks. The corners of her usually tip-tilted lips were turned downward, and she held one hand on her chin in a pathetic little effort to control its trembling.

"Oh, I wish I were dead!" she said, and turned and ran out of the milk house, across the barnyard, and down the cow-path until she came to the little brook at the foot of the night pasture.

The brook, supplemented by a wire fence, was the line between the Ball and the Taylor farms. She crawled under the fence, stepped across the brook on the stones, and came to an old gnarled apple tree on the Taylor side. The tree and the brook were old friends of Dorothy's.

The bank rose above the brook in a sort of natural amphitheater, shaded and protected by the outspread friendly limbs of the tree. Under the bank, back of a big bare root, was a little cupboard-like hollow which had in years gone by served her as a storc-house for childhood's toys. This little place by the gurgling brook had been a playhouse in pleasant times, and a refuge in times of trouble.

She threw herself face downward on the thick carpet of grass and leaves. For a long time the regular rise and fall of her outstretched body as she breathed made it appear as though she were asleep; but she was not. Like most of those who live in the country, Dorothy had learned that there is a certain comfort and serenity to be had by those who sorrow from a close physical contact with the soil.

After a time, she rolled over and sat up. "Wonder what I have done," she thought, "to have everything go so very wrong. Dad is making himself the talk of the whole country. Mother is sick with worry and nervousness. And Jim Taylor, who used to be my best friend, is now fighting Dad and getting himself in jail, and—"

"I wonder if he was in that bunch yesterday. That leader didn't look exactly like Jim—his voice, too, was harsher than Jim's—still—I don't know—Jim's just wild lately—don't know what he'd do."

(Continued on Page 135)

Take Stock of Yourself

Aunt Janet Gives Some Sensible Advice

JANUARY is stock-taking time. In offices and stores, clerks are going over shelves, listing what is on hand, what is short, what goods have sold well and what have not. Profits are being figured and losses deducted. It is something like and old fashioned spring-cleaning—and yet there is a difference.

For stock-taking implies a comparison between the new and the old and at least a hope that the lesson of past mistakes will be applied to the year ahead. It is a time when the good merchant analyzes himself as well as the articles on his shelves and starts a new balance sheet to record the history of the coming year.

Perhaps we should take stock of ourselves more often than once a year, and should always keep a watchful eye upon our own development. But it is not human nature to do things this way—and that may be logical, too, for the plant that is dug up every few days to see how it is growing doesn't make much progress to please its eager owner.

This, therefore, seems the appointed time for the home-maker to apply stock-taking methods to her own life and to base her good resolutions upon an intelligent understanding of her problems and capacities.

The House Needs a Going-Over

To settle externals first, suppose we give the house a thorough going-over. Christmas and the holidays, with the flood of preparations, the extra cooking, the children home from school, are past and the housewife breathes a sigh of relief—no matter how much she has enjoyed the excitement of the season. But now for her inventory and a chance to start the new year right!

Table linen and silver should be carefully inspected and the linen put in good repair. Stains not eradicated at the time of their appearance should be bleached out with whatever preparation dissolves them best. Lace should be mended, tears darned, old and torn napkins retired to the box where soft, clean old cloths await their final disposition as emergency band-aids.

All silver not in daily use should be cleaned, wrapped in tissue paper and put in a cotton flannel bag with a piece of camphor gum.

Then inspect your cooking utensils and put your kitchen closets in order. Your range probably needs a thorough cleaning. If grease has been spilled in the oven, if candy or fruit juices or soup has boiled over and been imperfectly cleaned off, scrape and scrub and dry and polish.

Scrub the drawer of the kitchen dresser and line with fresh paper. Sort out dish towels, throwing away worn ones and being sure none have grease spots left after laundering to attract mice. Go over the lamps or electric light fixtures, cleaning off bulbs and shades and putting new bulbs where any have worn dim or burnt out. Don't forget ornamental candlesticks, for ragged burnt-down candles are anything but ornamental.

Now for the Linen Supply

The linen closet should be attacked when you will not be interrupted, for you need to concentrate on this inspection. No place in the house demands such perfect order as the linen closet, no matter how small and unpretentious it may be. A good housekeeper is supposed to be able to put her hand on any article in her linen closet in the dark.

Distinctly important is the medicine chest. Standard first aid supplies should be replenished and set in regular order. Nothing gets so quickly cluttered up with useless articles as the average medicine chest. Remember that medicine, partly used up, usually loses its efficacy by long standing. Throw out old bottles relentlessly and have your clean shelves filled

only with staples of daily use.

What housekeeper needs to be reminded that the bureau drawers have a perfect genius for getting themselves into disorder? That is often the starting point of a household clean-up campaign. The writing desk needs its share of attention, too. There are bills to pay, receipts to file, letters to answer and much that can be thrown away. Fresh paper and envelopes, new pens and pencils, washed and filled ink wells and clean blotters tempt any one to the business of clearing up back correspondence.

Not Forgetting the Closets

Clothes closets are useful but often conceal their owner's misdemeanors. Old shoes which should go either to the waste pile or to the cobbler have a way of hiding in dark corners, along with torn or mis-mated rubbers. Hunt them out and either discard them or have them put in order! On back hooks are dresses we mean to mend or clean or make over "some day." Stock-taking time makes one realize how long that day has been deferred—and that it can no longer be avoided. Unpleasant as these jobs are, when done they leave a warm glow of self-satisfaction which is itself a reward of virtue, although in addition one has either much-needed space or a rehabilitated garment to wear.

Now—How About Yourself?

And now that the physical stock-taking is accomplished, you will be in the mood for the inward look which is often surprisingly revealing. How about yourself? Does the year of grace 1925 find you further along the road of intelligent living or are you making time at just about the same spot you had reached a year ago?

What books have you read? What books have you meant to read—and didn't? What new friends have you made—and how about your old friends? Friendships don't grow like Topsy, you know, but need cultivation as much as any garden plot. Think over your different friends—how often you have seen them, whether you planned to give them time or let things slip because you were busy or tired or worried by other concerns. Someone has said that after you have gone halfway, you should forget the first half and measuring the remainder, go halfway again, in order to be a real friend. Don't blame others for indifference, neglect or forgetfulness till you have gone halfway yourself and then at least half of the rest of the way.

Something Outside of the Home

Your children's school—have you visited it as often as you meant? Your church—have you taken your part in its work? Your community—can you be counted on to do your share in the everyday give-and-take of neighborly life, as well as under the inspiration of emergency? Most important, your home—have you found the difference between the orderly routine that makes daily duties easier and the rut that is only a "shallow grave?"

The stock-taking time of the honest woman raises more questions than could be listed, and no one could answer them. If you meet them squarely and set in order the shelves of your mind as well as those of your kitchen, it will indeed promise well for a Happy New Year—which is what I most heartily wish you all for 1925!

Aunt Janet

Try pinning handkerchiefs, collars and other small pieces to a tape and pin this to the line on wash day. It will save cold fingers in fall weather and much time searching these small articles out of the general melee.

When sweeping shut the room off from the rest of the house, keep the children away, and open all the windows.

Have you sentenced your wife to drudgery?

THINK IT OVER. Think of the life your wife leads with the lighting and cooking arrangements you have given her—and think how much of her drudgery is unnecessary!

Instead of endlessly cleaning lamps and trimming wicks, she can have clean, simple Colt burners that need no attention.

Instead of slaving for hours over a coal fire, she can have a Colt stove that is always ready to work.

Instead of the back-breaking effort of lifting irons on and off the range, she can have a quick, efficient Colt iron always at hand.

And besides:

Colt Light is the nearest man-made approach to sunlight. Colt Light does away with danger of fires started by overturned lamps. Colt Light makes life on the farm worth living. Yet it costs less to install for the average farm, than the cheapest automobile!

Union Carbide for the Colt light plant is sold direct to the consumer at factory prices. One of the 175 Union Carbide Sales Company warehouses is located near you. Union Carbide is always uniform. World's best quality. Highest gas yield. Always packed in blue-and-gray drums.

Kicking Over The Pail

A Sunday Afternoon Visit With The A. A. Philosophy Man

SHE was a beautiful little roan cow, nervous-eyed and well veined. She was a good milker, and was a general favorite in the barn-lot.

Yet she had one bad fault of which we could not break her; she would kick and run just as we finished milking. Many a time I have had my clothing dripping wet when I failed to rescue the bucket. We kept her till she was old, but she never reformed.

How many of us mortals are like that cow. We do some good things, and then kick them over.

* * *

I knew an evangelist who was a fine speaker and a clear thinker. He was a violent hater of tobacco. Always, when he came to his tobacco sermon, he would lose his temper, and say a lot of unnecessary things, and kick over much of the good he otherwise might have done.

I once had an official member of my church. I will not name him. He had a streak of personal pride that had to be stroked and petted, or he would oppose every good thing the other men wanted.

Where is the lodge, or village committee, or Grange, or church, that does not have this individual with them, who, at the critical moment, kicks over the milk?

There is the pesteriferous person who can not hold his tongue. He (or she) just itches to talk something that were better "untalked." So, at the critical

REV. J. W. HOLLAND

time, when something good has been planned, he kicks and spoils it all.

* * *

A city lost a Carnegie library because a man with a bumptious inflation of pride, getting peeved, wrote a letter to Mr. Carnegie.

A Presidential election was changed once because a woman got flighty and kicked over the pail by injecting the question of religious belief.

I hope that, in the great future that is opening up to the farmers through co-operation in production and marketing, some man with an ax to grind may not kick over the pail and spoil everything.

Internationally, in 1918, we all thought that we had fought a war to end war; but at the peace table, the war-makers, who are the profit-makers out of war, kicked over the bucket and doused the world with hostile misunderstandings again.

* * *

If our old cow had only been a human being, she could have been preached to, prayed for, and reasoned with, to give up that devilish habit; but, being a brute, she persisted in her fault.

To us, however, who have fiery tempers, treacherous tongues and suspicious dispositions, there is a chance given to us every day to acquire personal mastery over this kicking business through the grace of God.

The cow did not know better. She could not act like a man. Man knows better, and does not need to act like the cow.

Let's wait—go slow—keep cool—and not spill the milk!

The Trouble Maker

(Continued from page 133)

Forgetting her troubles for a moment, Dorothy reached her hand back around the big root of the tree into her old play-house cupboard.

"Haven't put my hand in there in years. I wonder if there's anything left."

She felt around for a moment and then pulled out a little dilapidated, weebegone looking doll. With a tender wistful little smile, the girl sat turning the doll over and over in her hands.

"Quite a spell since I put you in there and forgot you.... Must be all of fifteen years.... But now I remember as if it were yesterday."

SHE smiled as she recalled that day in childhood's land of make-believe when she and Jim had played at being man and wife. The little amphitheater under the big tree had been their make-believe home and they had been "Pa" and "Ma" to the little doll. She could close her eyes and almost hear that little boy as he sat down beside her in the leaves and insisted that they could not really be pa and ma unless she would let him kiss her. She had not been entirely unwilling either.

While she had hesitated, her mother had called. So they hastily deposited the doll baby in the cupboard, with a promise that "Pa and Ma would soon come back."

But the baby had waited patiently for fifteen long years for the little boy father and the little girl mother to come again and play at being married.

"If life were only as simple as that," thought Dorothy. "But you are not life," she told the doll, "and life changes. You're just the same today, but Jim's different, and I'm—"

Startled, she looked up to see Jim Taylor smiling at her. With a sideways motion of her hand, she threw the little doll out of sight in the leaves. Had he seen it? Did he remember? If so, he gave no sign.

How to Make Vinegar

As a Matter of Fact, It Really Makes Itself

THE price of a gallon of vinegar is not specially noticeable in the household accounts until pickling time. Then the house wife wakes up, and realizes that it requires some money to buy vinegar during the year.

I have made many experiments in making vinegar, and I know no reason why any one cannot manufacture a good article at home with no expense.

The best way, according to my idea, is to start in with a keg, or barrel, although it is not necessary. I had a beer keg given me, and as a starter I poured into it a quantity of "mother" that I had on hand. As often as I could I kept adding any sweet liquid to the contents of the keg.

Various Sources of Liquid

The liquid added was obtained from several sources. A panful of apple parings well covered with water, and cooked until tender, then turned into a jelly bag to drain will furnish excellent sweet liquid may be added and you will

be constantly finding new material to add to your supply.

If a can of fruit has "worked" the juice will make good vinegar—in fact that is just what it has started to become.

Liquid Collects Slowly

My keg is in the cellar, so in order to save steps, I keep a glass fruit jar in the pantry, to store the small contributions that may accumulate. Very often before the jar is filled, the liquid will begin to sour and form mother.

Without mother to start with it is necessary to keep the keg in a warm place until some forms in the keg. After it has started then store the keg in a cooler place, or it will make too fast and fill up the keg.

Try to add a little at a time to your barrel, as fast as some is drawn out, for if too much is added at once, when the vinegar is ready to use, it will make it too weak for a while.

If you do not have a keg or barrel to

Patterns for Morning, Noon and Night

For the hours when a neighbor may drop in or you may want to fluster into town, select No. 2299, a stylish one piece dress. No. 2299 has a cape which may be left off and offers two styles of sleeves to choose from. It cuts in sizes 16 years, 36, 38, 40 and 42 inches bust measure. To make size 36, 3 yards of 42 in. material is required, with 1/4 yard contrasting. Pattern, 12c.

For the work hours of morning, a good sensible apron. No. 2312 cuts in sizes 36, 40, 44 and 48 inches bust measure and takes 2 3/4 yards of 36 inch material to make size 36. Pattern, 12c.

Send your order to Pattern Department, American Agriculturist, 461 4th Ave., New York City. Be sure name, address, numbers and sizes are clearly filled in.

And for the evening party, No. 2305, with plain or embroidered skirt, simple neck line or becoming shawl collar. No. 2305 cuts in sizes 16 year, 36, 38, 40 and 42 inches bust measure. For size 36 you will need 3 yards of 40 inch material. Pattern, 12c.

Embroidery pattern No. 702 (hot iron transfer, in blue and yellow) 15c extra.

material for vinegar. Rinse fruit jars, or any dishes that have held sugar and pour the rinsings into the keg. Last year, I canned a large quantity of pears. The parings were packed into a large stone jar and covered with water and set in a warm place. In a few days I poured off a thick, syrupy liquid that was another welcome contribution. Blue-berries were so abundant in a pasture near by last year that I filled more cans than I cared for, sold some, exchanged some for canned goods and still there were plenty to be had for pickling. One time, I had several quarts picked ahead, and no way to dispose of them when I noticed that they were beginning to spoil. I mashed them thoroughly with a wooden masher, covered with water and allowed them to ferment. The rinsings of the various dishes I had used in canning blueberries was also poured into the jar. From this strained liquid, I made a wine colored vinegar that was so clear and sharp that I have never seen its equal.

Bear in mind that any wholesome

start with use a stone jug, or a large bottle. After you have commenced to have results you will find a way to procure a larger storage. Always strain all of the liquid added so as to keep the vinegar clear.

Grandpa Made a Special Sort

When I was a child, I remember very distinctly how good the vinegar on our baked beans used to taste when we went to grandpa's, and grandmother's pickles were so deliciously sour that we always wanted to eat many more than we were allowed to.

Every spring of the year in sugaring time grandfather made sap vinegar. The last run of sap is usually of a poorer quality and not considered up to the standard for making syrup. Grandfather used to boil this down somewhat, until he had an article similar to well sweetened water. When it had cooled, the empty vinegar barrels were filled. The outcome was a rich, dark-colored vinegar, to my mind far superior to cider vinegar. —Fannie E. Stafford.

Films We Recommend

Hints On Flowers For The House

HAVE you found our lists of recommended moving pictures worth cutting out and keeping? Several New York State communities are working on this problem of "the movies"—how to eliminate undesirable ones and how to bring good ones to the nearest moving-picture theatre.

In the previous issue we suggested that interested readers talk it over with the local exhibitor and prove to him that if he books the better films they will give their support. The lists printed in the AMERICAN AGRICULTURIST are made out by the National Committee for Better Films, an organization which approves of actively encouraging good films rather than criticizing all because some are poor. This is the latest list they have issued.

The following symbols are used to indicate suitability:

j—for the family audience including boys and girls of grammar school age up (juvenile). . .

hs—for the family audience including boys and girls of high school age.

no.mark—for the general audience, composed principally of adults; not objectionable for boys and girls though possibly rather advanced or not especially interesting to them.

hs THE AIR HAWK. Some very fine stunt flying distinguishes this picture, which is concerned with the efforts of a secret service airman to capture platinum smugglers. (F. B. O.)

ARGENTINE LOVE—Bebe Daniels portrays an Argentine girl who falls in love with an American engineer. Through the jealousy of another lover of hers and the suspicion of the natives, the girl becomes implicated in a murder. Beautiful scenes in an old Argentine garden. (Paramount)

hs BARRIERS BURNED AWAY—The chief merit of this film is its reproduction of Chicago of 1870 and the origin and sweep of the Great Fire which devastated that city. The story concerns a stolen masterpiece involved in a love affair. (Associated Exhibitors.)

hs BATTLING BUNYON—Wesley Barry as a garage mechanic aims at a partnership in the garage and the love of a pretty bookkeeper. On the way to achieving his ambition he becomes a comedian prize-fighter but surprises everybody by really knocking out his opponent. (Associated Exhibitors)

THE BEAUTY PRIZE—A manicurist, mistaken for a society girl, wins an Atlantic City beauty contest and finds herself involved in complications as a result. From a story by Nina Wilcox Putnam. (Metro-Goldwyn)

hs THE BELOVED BRUTE—In a setting of the West two brothers, of great physical prowess, after years of separation meet, and the brother who has spiritual as well as physical strength wins. How this works

out for the good of the defeated man makes a strong ending for the picture. (Vita-graph)

Why Indoor Plants Wilt

NEXT to temperature, in its importance in the wintering of good house plants, is water. Some persons who have grown plants for a number of years and have learned that temperature extremes are fatal, have failed to observe that atmospheric conditions indoors are not the same as those out of doors. The air in a room heated by water is usually dry, says *Nature Magazine*, while in a house heated by hot air the humidity is still higher. In any case, however, a room heated by artificial heat is drier than it normally is out of doors. Under such conditions water added to the soil evaporates very quickly, so that only a part of that added is available for plant use. The plant also uses water in dry, hot weather in keeping its "body" temperature down. Thus an insufficient supply of water causes plants to wilt down, slowly but surely.

Flowers for Next Summer

HAVE you commenced to think about next summer's garden? It is not a bit too early. The catalogues will soon be coming to our homes, and if it will be profitable for us to spend an evening studying them, for they contain much useful information, and the earlier we plan the better our chance for a good garden.

It is well to order seeds this month. The seedsmen appreciate the early order, for when the rush begins it is sometimes impossible to do justice to all, and the seeds may not reach you until the proper time for sowing is past. Tomatoes and peppers should be started in the average farm kitchen in February. Our seasons seem to be changing, and we are not sure of escaping frosts after September first.

We used to plan our gardens for summer use and storage, but since we can our vegetables, we need larger quantities. So in choosing varieties we should consider the kinds that can be canned or dried, that make good pickles and that admit of winter storage, as well as a bountiful supply for use in season.—MRS. GEORGE GRAY, New York.

Making Bed Comforts

I WILL tell Mrs. P. how I make warm bed comforts from worn clothing. After washing men's worn coats and trousers, I then rip and press. I first cut out 73 ten-inch squares, which make a large comfort. These I baste on a worn sheet or blanket, then stitch on the machine, using a long stitch. I work the seams in brier stitch, usually in red. I am partial to red for bed covers, as it is a warm color. I then line with outing flannel, and have a very good looking, warm and economical comfort.

I do most of the work on a large table, as I find I can thus make a comfort in a surprisingly short time. Smaller patches can then be cut from the pieces left after the large ones are cut, thus using all good parts. If I cut squares I run them diagonally, if oblongs I set them straight. I prefer these covers to the cheap ones I have seen, filled with dusty cotton or waste.—A. S.

Cocoa Cornstarch

4 tablespoons cornstarch
2½ cups of coffee
½ cup of sugar
One-fourth teaspoonful salt
3 rounded tablespoons of cocoa dissolved in some hot coffee.
One-fourth teaspoon ground cinnamon

Cook thoroughly and when done beat well with egg beater and flavor with vanilla. Turn into moulds. Serve with boiled custard, milk and sugar, or marshmallow sauce.—E. D.

Farm Taxes in New Jersey

(Continued from Page 118)

As near as I can gather the road users in this state are only paying about 40 per cent of the improved road bill. If they paid it all, the roads would be worth more to the users than they would cost.

I note that New Jersey has fallen into the habit of levying a special General Property Tax for emergencies. Your \$40,000,000 bond issue for roads, your 1 mill road tax, tunnel tax, building tax, are all examples.

This is a bad tendency, as it still further aggravates the evil of concentrating the tax burden on one class of property. It is "Licking the willing horse," and to mix the metaphor you are likely to keep on doing it until you break the camel's back.

It is not beyond the wit of man to devise a tax system that will distribute the tax burden over all the wealth of the state more equitably than you are doing. It should be done. One of the by-products will be that other chief aim, ECONOMY.

As matters stand, under the General Property Tax, there are only two classes of the community that are vitally interested in economy: they are the farmer in the country and the rent payer in the city.

It is one of the well established principles of taxation that a tax on land cannot be shifted, and it is equally well established that the tax on houses in the city is added to the rent bill and paid in the main, by the tenant.

When rising expenditures are reflected in the taxes on "Big Business" and on large incomes, then, and not 'till then, the business men will join with the farmers and rent payers in insisting upon REAL economy and you will get it.

SEEDS—NURSERY STOCK

HANDSOME GLADIOLUS, over 100 kinds, list free, 10, 20, 30 or 50 bulbs, \$1. BURTON PEONY GARDENS, Madison, N. Y.

Service Department

Jerseymen Have Commission House Troubles

NEW JERSEY growers favor some kind of Federal or State regulation of commission houses. It is claimed that unfair advantage has been taken by unscrupulous merchants, though it is difficult to lay your finger upon any instance where dishonesty can be proved.

Last year in May, about twenty Gloucester County farmers talked over their marketing problems and resolved to run their own clearing house. They formed a corporation, rented a store in Deck Street, Philadelphia, and began successfully to sell their own produce. This cooperative move was primarily brought about by the return basket situation. Dealers had announced that after a certain date they would not "return the wood." With no increase in produce prices, growers faced a big loss, as the cost of containers was high, and increasingly so. The former practice of returning baskets was followed by the cooperative farmers until they were forced to sell containers with produce, by the fact that all the commission houses were doing it.

Price Level Is Higher.

In spite of the united opposition which the new venture aroused in Gloucester County, growers have been getting top prices. In fact, one of the representative members claims that the keen competition has maintained a higher market than would have been possible when the merchants had the field to themselves. "At least," said he, "we have the satisfaction of knowing that we receive the actual price that our stuff sold for."

No doubt there are many produce dealers in Philadelphia who give Jersey farmers a square deal, but there is also a low type of grafter who preys upon the credulity, and betrays the confidence of those who ship to him. Such men should either be forced out of business, or their methods placed under supervision. The Gloucester County growers believe they have taken a step in the right direction.

Do You Know Where This Man Is?

"I AM a reader of your paper and would appreciate it very much if your Service Bureau would try and find out through your paper if anyone knows where Joseph McDounals lives and could give me his address. We worked together fifteen years ago on the Barge Canal at Baldwinsville, N. Y., and one year after he moved to Fulton, N. Y. He was an aged man and had one daughter, Tressie, at home."—W. H. F., Oswego County, N. Y.

Before You Invest, Investigate

WE GET a great many letters thanking us for services which it has been our pleasure to render, but unfortunately we are not always able to help out. It is certainly disheartening to have to write one of our people that their money is lost, and that we are unable to help them farther. This is so often the case where farm people have invested without careful investigation in the stock of wildcat companies. Not a day goes by that we do not learn of one or more subscribers whose money has been lost through listening to the glowing words of a salesman or reading a highly colored circular. How many times we have wished that there might be in every home in plain sight, the motto "BEFORE YOU INVEST, INVESTIGATE".

There is always your banker or your lawyer to call upon, and there is always the Service Bureau of the AMERICAN AGRICULTURIST. To be sure we may disappoint you by telling you that the statements about great profits on your investment are false, but how much better it is

to be disappointed before you invest than afterwards. The following letter is very, very typical of thousands that we receive throughout the year on this subject:

"I am writing you concerning stock I bought of the Francis Oil and Refining Company at Francis, Oklahoma. I purchased 300 shares of capital stock at \$1 a share. One year ago I was asked to send my stock to the National Bank of Ada, where it would be exchanged for new stock at the ratio of 6 to 1, as the old company was in the receivers' hands and a new company was to be formed. I sent my stock and this fall I received it back, saying that the new company was never organized. Have you any knowledge of this company? Is it still in existence, and is there any chance of my getting any of my money back?—Mrs. T. V. D., St. Lawrence County, N. Y.

We took this matter up with the First National Bank in Ada, Oklahoma, and received the following reply:

"Answering your favor with reference to your client's investment in the capital stock of the Francis Oil and Refining Company, you are advised that in our opinion this investment represents a total loss to the purchaser, as the reorganization planned at the time referred to in your letter failed to materialize."

Enough said!

No Law For the Widow

I have been informed that there is a law providing widows and their dependents. If so could you inform me in any way about such a thing? Or where I could look to get informed?—Mr. A. O'H. St. Lawrence County.

In reply to your recent letter, we know of no such law in the State of New York as the one referred to by you. There had been such a law over in Pennsylvania, but very recently the Supreme Court of that State declared it unconstitutional.

It might be possible for you to get some assistance from the State Charities Aid Association, 105 East 22nd Street, New York City. Why not write them?

How To Get A Patent

Will you kindly inform me by the enclosed envelope as to the proper way to start taking out a patent and also if there is any way to get protection while I am making and trying out the appliance. I have been told that by going before a notary public and making a sworn statement describing the appliance, and recording it with the town clerk, I would have temporary protection while getting ready for a patent.

If you will write to the Bureau of Patents, Washington, D. C., stating to said Bureau the nature of your appliance and that you wish to secure a patent thereon, that Bureau upon your request will send you the proper blanks and data concerning its requirements.

Thereafter, if the appliance is something that might be stolen, it will be well for you to ask a reputable attorney to secure the patent for you.

Could Not Get Results Alone

"In yesterday's mail I received check from the railroad in payment for claim of damaged shipment on July 9th. I could not get any results from them myself through regular channels. So with but small hope of ever getting anything I called on your Service Bureau. To say the least, I was greatly surprised to hear from both yourselves and the company that a settlement would be made. In just ten days it was, for which I thank you ever so much. I will say to any other subscriber that if they have any trouble of this kind or any other to notify the American Agriculturist immediately, as they will produce the goods if there is a possible chance at all."—H. A. S., St. Lawrence County, N. Y.

"Better Farming; Better Business; Better Living"
—Roosevelt.

BUILDING A MORE PROSPEROUS AGRICULTURE

MORE THAN 300,000 farmers are improving their farms and paying off their mortgages through the aid of Federal Land Bank Loans. They enjoy easier terms and lower interest rates. These helpful loans are made by the twelve Federal Land Banks, with combined assets of nearly \$1,000,000,000. More than \$45,000,000 of their capital stock has been supplied by active farmers through their farm loan associations.

Thus the twelve Federal Land Banks, with their more than 4,600 local national farm loan associations, make up the farmers' own borrowing and investment system, operating under Government supervision.

To provide funds for loaning, the Banks issue Federal Land Bank Bonds, secured by first mortgages on approved farms valued by Government appraisers at not less than double the amount of the mortgages. Every Bond is guaranteed jointly by all the twelve Federal Land Banks with combined capital and reserve exceeding \$50,000,000. These Bonds are everywhere recognized as a standard investment security.

Every farm family can share in the benefits of this mutual system by owning Federal Land Bank Bonds. A beginning can be made with a single Bond. Denominations are \$40, \$100, \$500, \$1,000, \$5,000 and \$10,000. Coupon or registered form. Interest will be promptly paid twice yearly, and the principal when due. Both interest and principal are tax-free, inheritance taxes only excepted. If desired, the Bonds can be quickly sold for cash or used as security for a loan.

Federal Land Banks are located at

Springfield, Mass.
New Orleans, La.
Wichita, Kansas

St. Louis, Mo.
Berkeley, Cal.
Omaha, Nebr.

Louisville, Ky.
St. Paul, Minn.
Baltimore, Md.

Columbia, S. C.
Houston, Texas
Spokane, Wash.

Write for Federal Farm Loan Board Circular No. 16 descriptive of these Bonds, addressing nearest Federal Land Bank or the Fiscal Agent.

Outstanding Points of Excellence

(1) Thoroughly kiln-dried and air-seasoned Solid Oak throughout; (2) Strong, Dependable Construction; (3) Finely Upholstered Full Length Backs and Seats covered with a fine grade of Rich-Looking Brown Spanish Artificial Leather, and very well padded with rest-giving, sanitary upholstering materials; (4) Wide, roll arms on Arm Chair and Rocker and Sturdy Posts on all pieces; (5) Every piece of large, full size. The Library Table is 24 x 36 inches, with Writing Desk Drawer and big, roomy lower shelf. This table is of striking beauty. Rocker and Arm Chair are both 37 ins. high and 25 ins. wide, with seats measuring 19 x 19 inches. The Sewing Rocker is 34 inches high and 17 inches wide; Side Chair is the same size. The Taborette top measures 11 x 11 inches. The Waste Basket is 14 inches high. **Writing Desk Drawer, an Exclusive Spear Feature.** The Library Table is equipped with this splendid and unusual feature: a desk drawer which when pulled out can be used as a writing desk. It has a pen and pencil groove, ink well receptacle and ink well. The lid is removable; writing supplies can be kept in the drawer. This special feature makes the table serve a double purpose: library table and desk. Desk drawer measures 18 inches x 15 3/4 inches. You have your choice of two finishes: Nut Brown Fumed Oak or highly Glossed Golden Oak. In ordering be very careful to state your choice of finish. **Complete 8 Piece Suite. Order No. SA625. Price \$39.95. Terms: \$1 with order, \$3 monthly.**

Blue and Gold Velour Tapestry Scarf FREE!

If you will BE PROMPT; if you will send your order for the library suite QUICKLY; I will send you absolutely Free a luxuriously Handsome Table Scarf. This cover is very appropriate for the Library Table. It is made of a good velvety quality Velour. The Color is a deep, rich blue, enhanced by an edge of gold braid and with decorated floral tapestry ends and silky tassels. The scarf is 12 inches wide and 55 inches long. This attractive Rich-Looking Scarf is Absolutely Free if you send promptly Your Free Trial Order for the Library Suite.

WANTED: 100,000 New Friends

I want to make a hundred thousand new friends this year. I want you to be among this number. I want you to be my customer, for then you will be my friend. When you deal with Spear, dissatisfaction is impossible, loss is impossible. If anyone is going to lose I am the one that suffers; not you—ever. Thirty years and more of a "Square Deal to the Nation" guarantee that the House of Spear is entitled to your complete confidence.

Home Furnishing Guide FREE

My new 1925 Catalog is a huge treasure-house of Happy Home Furnishing Ideas. It contains such a great variety of furniture and furnishings, that no matter what your taste or need, you are certain to find exactly what you want and at the right price. Before you buy anything anywhere it will pay you to get my Big Free Book. Then you will know why thousands of families buy everything they need from me. My prices are the Lowest, I Give the Longest Time to Pay. Everything I sell is sent on 30 Days' Free Trial with a Money-Back Bond that protects you to the limit. Send for my Free Book today, it shows Thousands of Bargains in Furniture, Carpets, Rugs, Stoves, and everything for the Home.

12 Fruit Dishes, 5 1/4 in.	1 Nappie, 8 1/4 in.	1 Butter Dish, 6 1/4 in.
12 Cups	1 Sauce Boat	

Only \$1 Brings 110-Pc. 18-Carat Coin Gold Decorated Dinner Set

It's easy to get this superb 110-piece 18-carat coin gold-decorated Dinner Set with your own initial in beautiful harmonizing colors on every piece. Read the sensational offer from Hartman, the Largest Home Furnishing Concern in the World. Then send for this marvelous set while the special bargain price holds good, and receive with it, absolutely FREE, the beautiful 26-piece Silverware Set, made exclusively for Hartman's by WM. A. ROGERS, Limited, initialed to match dinnerware. Don't bother with postal or express orders; don't even write a check. Just pin a dollar bill to the coupon below and that will be your first payment. Pay nothing more for 30 days—then only small monthly amounts if you keep the Dinner Set. Only by seeing the set itself can you appreciate its superior quality, its snowy white lustre and rich decoration which compares with the finest, most expensive imported ware. Each piece is stamped genuine "18-Carat Coin Gold."

Very Important

Hartman guarantees that every piece in this set is absolutely first quality—no "seconds." The 18-carat coin gold decoration is guaranteed not to wash or wear off—unlike the common gold decoration used by others on dinnerware. This is a standard or "open" pattern. Replacement pieces may be had of us for three years. Excellent packing to prevent breakage.

Newest and Finest in Dinnerware!

Otsego County and Some Ancient Villages

The Crossing at Wattles' Ferry and Other Fireside Reflections

I THINK we have all heard of preachers who have been honored by the request to preach from a certain text, or of singers who have been flattered by the demand that they render a certain song. Even so, I feel mildly complimented because an Otsego county man has suggested that I write something concerning his own baliwick and offer it to the A. A. for publication. Of course I am glad to comply with his request, although I am not without misgivings lest I shall fail to measure up to his expectations.

And I may properly write of Otsego because it basks in the radiance of Schoharie. Our Farm Bureau Manager, Mr. Pollard, being a loyal adopted son of Schoharie (even if not to the man-or-born) diplomatically assures Otsego people that theirs is *next* to the best county in the state. So I am fond of insisting that the greatest advantage enjoyed by Otsego is that it borders on Schoharie, and consequently some of the many good things in Schoharie just naturally slop over into it. In any case, I am, as the crow flies, within six miles of the Decatur hills and always when working on the back end of the farm, Otsego County makes a part of our pleasant western horizon.

Head Waters of the Susquehanna.

Otsego County as a whole lies high. Streams flow out of it in almost every direction, but very few streams flow into it. The county embraces the head waters of the Susquehanna river. It is a rather sluggish, insignificant stream where it emerges from Otsego lake, but it becomes, if I mistake not, the largest river of the Atlantic seaboard, and it is surely a rather majestic stream where it finally loses itself in Chesapeake Bay.

We New York farmers must always remember that we are a little unfortunate in living close to the northern edge of the country where corn will ripen. When, in central New York, we get, say twelve hundred or more feet above sea level, corn growing is usually a contest with cool midsummer nights and early frosts. When it comes to filling the silo, I just envy the man who lives not too far up in the air and then at least as far south as the northern line of Pennsylvania.

Otsego County spreads over considerable country, as New York counties go, and it surely offers very diverse types of soil and even some considerable variations of climate.

What Limestone Does.

Some one has declared that "every great agricultural civilization of the world is founded on limestone soil,"—an epigram that will perhaps hardly stand investigation, and yet I confess that I am always drawn toward the country where alfalfa and clover thrive, without the expensive necessity of hauling on limestone. So the best part of Otsego County is the northern tier of towns—Cherry Valley, Richfield, Springfield and Plainfield—names that bespeak the New England heritage of the men who founded them. Much of the land in

By JARED VAN WAGENEN, JR.

these townships is of the best type of alfalfa soils, with frequent limestone out crops, stone walls built of limestone fragments and with drumlin hills—great furrows from the glacial plow made up of a mixture of clay and limestone gravel. Fortunately for the county, its northern edge is crossed by that long and narrow belt of limestone that runs straight across the state from the Hudson river to Niagara Falls, and it is either on or directly south of

The Best Yet

NO FIRMER bit of writing has ever appeared in the old American Agriculturist than Jared Van Wagenen's story on this page, and that is saying quite a lot. Mr. Van Wagenen has written many great stories, but this tribute to the farm people who made America possible is, in my opinion, the best one yet.

Tonight, when the chores are done and supper is over, draw up with the family around the sitting room fire and read this article out loud. I hope you enjoy it as much as I did.—
E. R. Eastman.

this outcrop where the most of the really good alfalfa soils are found. I distinctly remember that on the farm of Frank Smith at Springfield Center I saw a field of alfalfa which seemed almost ideal—the standard of judgment being density of stand and almost absolute freedom from other plants.

Now while it is true that this favored section of the county has abundance of lime, it peters out rapidly as you go south, so that the southern part of the county needs lime about as badly as any portion of the state.

The Farmer Knows Best.

It is a favorite belief of mine that in the long run the working farmer may be trusted to find out what his farm is best adapted to and that he don't really need a soil survey or a professor to give him this information.

So I remember that the potato, while it needs a light and friable soil and a cool summer, is not at all insistent upon a supply of lime. The farmer of southern Otsego discovered this many years ago and so all over the high hills around Maryland, Schenevius and Worcester potatoes are an important side line, although not in the same intensive fashion as in Steuben County.

What Volstead Did to Hops.

Once upon a time Otsego County had a very highly developed hop industry which enjoyed some very palmy years and which flowered into big farm houses and made considerable money for some men but it practically disappeared even before the coming of the 18th Amendment. There are one or two localities where there has been developed a special-

ized industry in growing green peas for the city markets but on the whole it is a dairy-potato county and in the northern part and in the valleys such as the Wharton, Unadilla and Susquehanna there are some stately barns and prosperous farmsteads.

So I cannot really say that the county is agriculturally very different from most of the counties of the New York milk-shed. To me the most interesting thing in Otsego is not its agriculture but rather I would select four of its old villages—Richfield Springs, Cherry Valley, Cooperstown and Old Unadilla. I do not think of another county in the State which can boast of four villages which can offer as much for the pen of the historian and the romancer as do these.

The Old Coach and Four.

Come to think it over, I am not at all sure that Richfield really deserves to be included in this distinguished company. Its chief claim to remembrance rests on the fact that it was once a famous fashionable summer resort and a little of the glory and glamour still lingers. I remember that I first saw the place in the season of 1891 and I imagine that it was then in the heyday of its golden prime. There I saw a tally-ho coach with its four-in-hand team of faultlessly groomed coachers and as it swept down the street with its brilliant company, some high official (I am ignorant of his correct title—footman or guard perhaps) in glorious uniform with the tops of his bright yellow boots turned down around his calves, like a sort of cuff, put to his lips his yard of brass, and while the eyes of we on-lookers popped with wonder, he blew a strange fan-fare ta-ra-ta-ta-ta-ta-ta-ra-tara-ra-ta-ra * * *. That was a sight to stir one's pulses. Personally, I am not much of a horseman. I prefer gasoline wherever it is possible to use it, but, nevertheless, the most imposing limousine that ever rolled on rubber tires is a poor, cheap looking contrivance beside a tally-ho coach with a spanking team of four and a skilled man with a long lashed whip and four leather ribbons to "tool" it. It brings to my mind once more Thackeray's sonorous dirge over the final passing of the English stage coach, "Alas—for we shall never again hear the horn sing at midnight nor see the toll-gates fly open any more."

A Terrible Day.

But Cherry Valley has a secure place in history. Before the Revolution it was one of the most populous and prosperous of the frontier settlements. It lay in the midst of fertile fields in the lap of the wooded hills and pioneer life was in some ways losing its first hardships and becoming relatively rich and substantial. Then in 1778, on November 11—the date we have since learned to call Armistice Day—a mixed array of Indians and Tories (men still point out the path by which they came) poured down from one of the steep hills and in an hour

VOL. 115 February 14, 1925 No. 7

Nice Weather!

THE ground hog came out the other day, but he didn't see his shadow, and he didn't stay long. He took one look of disgust and hastily retired for another six weeks. Just how he got out and back through the ten foot drift over his hole is more than we have figured out. Old-fashioned winter is right! As for us, we prefer them a little more modern.

What Is Your Ideal?

IN our January 31st issue, we announced a contest for men, either married or unmarried, on the subject, "My Ideal Wife." Letters should be mailed not later than February 16th. For the best letters, we will pay three dollars for the first; two dollars for the second; and one dollar apiece for all the other letters we can publish. In case of a tie, we will give the full award to each contestant. Letters should not be more than two hundred words in length.

You still have a few days to present your views. All communications must be signed, but names will be considered confidential.

Start Housecleaning at the Bottom

"As per your suggestion on high taxes, I would say that at least here is one farmer who agrees with you when you say that taxes should be paid direct to the county treasurer and save the added cost for collection. There are altogether too many petty offices, each of which gets a small rake-off. Start your housecleaning at the bottom. I am enclosing a statement of how we pay taxes in Minnesota. Let this old state take a lesson from the Western states."—R. B. K., Onida Co., N. Y.

THE statement enclosed had on one side a tax bill and on the other a complete printed statement showing in great detail both in actual dollars and in mills the different purposes for which the tax levy for the year had been made. It showed the levy for the general state fund, for the state bond sinking fund, for the state bond interest, for payment of the state soldiers' bonus; and then under the county taxes it showed what had been raised for general county taxes, the county fair, county bridges, county roads (both construction and maintenance), and then it carried the same principle of full statement down into the towns and villages expenditures, showing the money raised in each school district for state and county taxes, for the cities, villages and townships, for local bridges, for school taxes, and several other items.

All of the taxes were paid direct to the

county treasurer. It was a concrete example of just what we have been advocating for some time, that the taxpayer has the right to know for just what purposes every cent of his money is spent, in the local, county and state governments.

While we are speaking of taxes, do not forget to read what M. C. Burritt has to say about local taxes on Page 156. It is time for all of us to give serious thought as to what can be done to reduce the taxes right in our own locality. They are the ones that are causing most of the trouble.

Will You Kill a Cow?

ALL through the country where the AMERICAN AGRICULTURIST circulates, there has been much talk this winter of killing a cow for beef. We have received a good many signed slips from our people signifying their intention of cooperating with us in our "Kill a Cow" campaign. Perhaps as never before men are coming to realize that if there is any money in the dairy business they must get rid of the cows that do not pay. We know that for every man who has sent in a slip there have been many hundreds who believe in first doing a thing and then talking about it afterwards and that therefore our campaign has been of great benefit to the whole dairy industry in setting men to thinking about the necessity of getting the dairy on a business basis.

But the good work has only just begun. Let us not stop here. COWS THAT ARE PRODUCING LESS THAN 5,000 POUNDS OF MILK A YEAR ON A LOW BUTTER-FAT TEST ARE LIABILITIES, AND THEY ALWAYS WILL BE. They not only injure your business, but they are holding back the whole industry. They increase the costs of production and they keep down the prices because of the surplus which they make.

The State Department of Farms and Markets is doing the dairy industry a great service in more ways than one by killing off thousands of cattle infected with tuberculosis. This is the time to add to the diseased cattle all of the others who are being kept at a loss. We do not want to be tiresome, and especially do we want to keep out of the class of those who are always offering too much advice; but nevertheless we would be failing in our duty to you and to the dairy industry as a whole if we did not emphasize as strongly as words will say it that THE DAIRYMAN WHO ATTEMPTS TO HOLD ON TO POOR PRODUCERS IS GOING TO BE STARVED OUT OF BUSINESS; while on the other hand, the future of dairying for the man who makes a study of it was never brighter.

The Mystery of Life

THE greatest mystery of this series of mysteries which we call life is life itself. Where we come from or how or why, no man knoweth. Yet we are beginning to understand a few elementary and fundamental principles. We know, for instance, in stock breeding that two and two do make four most of the time. We know that when a scrub bull is mated with a worthless dam, the result is pretty likely to be a scrub also. The occasional exceptions to this rule, the times when two and two make five, increase the fascination of the breeder's work.

We know too that when a sire of proven worth is mated with a dam with a long record back of her, the result is likely to be an individual of promise; and once in a lifetime, the result may be a Glista Ernestine, who produced 17,000 pounds of milk a year for eight straight years.

When we transfer our interest to human genealogy, ancestry and life trees, the subject becomes even more fascinating because of its possibilities for human progress. In a rural section of the East, there is a family which has been in this country for many generations.

American Agriculturist, February 14, 1925

It is said that in each of these generations there are more black sheep than white and that more than half of the individuals go to jail, the idiot and insane asylums, or the poor-houses. It is a family of scrubs.

On the other hand, all history is filled with hundreds of examples of families whose individuals generation after generation attain high places of achievement in every walk of life.

Of course, there are exceptions. The scrub family produces some good individuals, and there are black sheep in every family. Chancellor Day once made the humorous remark that he started with great enthusiasm to study his own family tree, but after he had gone one or two generations back, he sort of became discouraged and thought he had better stop!

For the same reason, none of us should be over-proud of ancestry. But nevertheless, with the human race, as with animals, two and two do make four most of the time, and sometime, maybe in a hundred years, maybe in five hundred, people are going to realize this and apply the rules to the human race that farmers have learned in their stock breeding. When they do this, then all of the progress that has been made in the past will be but a drop in the sea as compared with what the race will do in the future.

Land Banks Bonds a Good Investment

WHEN it comes to borrowing the capital for purchasing a farm or expanding the farm business, there is no better source of help than the Federal Land Banks. To be sure, one has to have some capital himself or have the farm at least partly paid for before he can get a loan from the Federal Land Banks, but this is as it should be. We are very doubtful about the proposition of going into the farm business or expanding the farm business without at least some money to start with. The Land Bank mortgages are granted for thirty-three years, thus giving the borrower a long period in which to meet his obligation.

Another good thing about the Land Banks is that they raise their money for their loans in the sale of bonds; and in our opinion there is no better nor safer way for farmers who wish to invest their savings outside of their farms than in these bonds.

Eastman's Chestnuts

IN AN argument once with a city man about the so-called "hay-seed" or "rube" farmer, as he used to be painted in every show, I made a wager that we could go out on Fifth Avenue and count more real rubes of the long whiskered type in one hour than could be counted in any rural county in the United States.

Therefore, when a subscriber sent in the following story, it amused me immensely because it is so true, and I am sure that every farmer will enjoy it.

Several years ago, when sight-seeing companies went in for more active solicitation of passengers from the people passing on the sidewalks, a certain guide was standing at Forty-third Street and Broadway, when he saw coming toward him a quaint old couple with all the marks of real "hayseeds". The man had chin whiskers, and his wife was wearing an antiquated brown silk dress, with puffs over the back of the skirt, that suggested the days of the bustle.

The guide invited them to take a trip. They walked past without paying any attention to him. Soon he saw them returning, still gazing all around them. So he solicited them again.

"YOUNG CHAP", said the old man, with a nasal twang, "I'VE LIVED IN NEW YORK SINCE THERE WAS WOODS ON FOURTEENTH STREET, AND I DON'T HAVE TO DO NO SIGHT-SEEIN'."

Don't save all your smiles for the parlor. Use a few in the kitchen.—Anonymous.

Out Of The Editor's Mail

A Few Of The Hundreds Of Interesting Letters From Our Readers

“I HAVE been trying to find time when I could keep awake, to write you about the tax reduction scheme or program. Also to cheer you on in the Kill a Kow campaign. I have killed two cows this season, one that I bought last spring, a good cow I know, but when she freshened her bag went bad and I have sold her for beef; another that I bought as a calf that was sired by a thoroughbred Guernsey bull that I owned and dressed in fair flesh 1152 pounds meat. The cow dressed 710 pounds meat. She was a good cow but had the habit of holding up her milk until she dried her milk flow down too much to suit me. Last year she gave 9543 pounds with an average test of 6%.

"I have two left, half Guernsey and half Jersey grades, own sisters. One produced 10487.8 pounds milk, average test of .058 the other produced 8673.4 pounds milk, average test .062. This pair look pretty good to me. I have one more, a registered Guernsey that I bought this fall, but she is a disgrace to my other two. I killed one last year in December that dressed 879 lbs. of the four quarters. She gave about 7000 lbs. milk per year and tested about .06. I have written about these cows to let you know that common farmers can raise good stock if they try.

"One more law I wish to mention that I think should be changed. I have a one-ton Ford truck, gross weight of truck 2690 lbs. I have to be licensed for three tons in order to be allowed to carry one ton besides weight of truck. I have to pay eight dollars per ton for combined weight of truck and load. This makes me pay twenty-four dollars for my license. Is it right that a poor farmer should have to pay twenty-four dollars for the right to run a truck to do his own work? I call this pure robbery. Three-fourths of the whole work of my truck was done on my own farm. I think there should be a difference in the price of a license to do your own business and one for trucking for others or as I might say, for hire. I would be glad to have you take this question up with the proper authorities."

—“H. C. I., Pottersville, N. Y.”

Raking with an Ox

“IN the panicky times of 1870, I went to work for the best farmer in our burg one month in haying for ten dollars. As my father did not own a power hay rake, this farmer persuaded me to accept a wooden revolving hay rake in exchange for my month’s work, as he had just bought the first steel toothed wheel rake I ever saw and did not care for the revolving rake any longer. I felt very proud of my purchase and my father pretended to be very much pleased with the rake so he fixed a harness for one of our oxen (as we did not own a horse so he could rake the hay with him. One of my younger brothers rode the ox and my father trudged along behind, holding and dumping the hay as fast as the rake or “push” would gather a sufficient bunch. Father would lift up on the cross handle and cause the ends of the long wooden fingers to come in contact with the ground and turn or revolve one half turn and dump the hay and lock again, in readiness to gather the next bunch of hay.

"This performance continued very satisfac-

torily to my father and brother until they came in contact with a large bumblebee's nest and the bees seemed to think the ox was to blame for the destruction of their home, so enough of these warriors proceeded to punish the big ox (he weighed 1600 lbs) for his supposed trespassing until the punishment caused the ox to gallop off so fast that my father could not continue the dumping of the hay. My brother got dumped instead; the ox got careless as to obstructions so he came in contact with an old log fence and made kindling wood of my first month's wages.

—“E. E. C., Steuben Co., N. Y.”

hours for themselves and less work and more conveniences for their wives, together with better educational facilities for their children. For the most part, the farms they are leaving have never been really profitable farms to work. They are needed more for the production of timber than for potatoes and milk. This movement will in itself help relieve over production caused by war inflation followed by practically complete stoppage of export of Farm Food Products.

"In the meantime we are inclined to favor the recommendation of the College of Agriculture and the Farm Bureaus, to cut production costs to the bone, to produce more economically—even if we produce less, to turn the poorer fields into pasture, keep fewer but better cows, buy less commercial feed and less fertilizer, and to be unusually careful about making heavy long time investments at high prices.

"Time alone will adjust the present unbalanced economic situation. Good farmers on good farms will win out in the end. Medium farmers on medium farms have a good chance if they stick long enough. Poor farms ought to be abandoned.

"The other day, I was talking with one of the older professors in the agricultural college at Cornell and asked him what, in his judgment, ought to be done for the New York State dairy farmers. His reply was, 'Leave them alone.'

—“C. A. T., New York.”

From a Farmer's Wife

“THE AMERICAN AGRICULTURIST
is one of the most welcome of
the many papers we receive. I
learned to love it when a child and
my father subscribed for it. At that
time it was a monthly publication.

"The letters relating to women working out of doors have interested me greatly. My observations from living both in city and country have led me to believe that nowhere is the opportunity for real home life equal to that on a farm. If this be true, it is worth while for the husband and wife engaged in making such a home, to plan and work together. This does not necessitate

either one's working beyond his or her strength. Whatever injures the health is sinful and in a mother may bring punishment also upon future generations. In the present financial and labor crisis, let us cooperate more closely than ever before.

"I would not suggest to the over-burdened farmer's wife, any addition to her duties but would, as it were, call attention to the great

MORE THAN WE CAN 'TEND TO ALREADY

Darling, in the New York Tribune

Leave Farmers Alone

“**A** FAVORITE topic of the day is “What is the matter with farming?” The public press is filled with recipe for curing the agricultural ills. Lecture platforms pour forth their healing balm and great legislative halls of the nation resound with the wailings of this or that Moses who would lead the children of the soil out of the bondage of economic slavery through the Red Sea of remedial legislation to the promised land of government price fixing.

"Great promise there is of relieving farm finance by buying vast quantities of farm products at the price much above the market, with funds from the Federal Treasury and then replacing those funds from taxation. We have had enough price fixing and government administration of business to last a generation. Oil boogies and war-surplus-sale-scandals and million dollar government hospitals are making us skittish of presidential-year-farmer-bonus bunk.

"One thing that does not frighten us is the news, which is true, of thousands of farmers who are deserting their rocky fastnesses among the hills to seek in town more pay and shorter

How To Rent Money

It Is Good Business To Have Working Capital

THAT good
story about tak-
ing a farm inven-

DAVID STONE KELSEY

world tried to run
on the short-sight-
ed methods of
the bow-wows in one season. Not
over one-sixth of the transactions in the
business world of today are done on
owned, cash capital. Five-sixths of them
are done on hired money. How else can
accumulated money be used? Does
hoarded money, unused, help the wheels
go around?

many farmers, we should all go to
thinking at our place. For one thing
the idea one better—by
making out, also, an annual budget. Di-
rectly after taking inventory and annual
balance we have proceeded to list our
probable gross income for each month

D. S. KELSEY
will begin to show
up. Then we shall make plans accord-
ingly ahead of time.

Farming is first of all a business, pre-
cisely as is manufacturing and merchan-
dising. That man is headed for a failure
who undertakes a year's field opera-
tions not recognizing his absolute need
of working capital. We, therefore, try
to face the facts squarely at the outstart
of the year. There are two steady out-
goes for cash; living expenses (the pro-
prietor's "pay" which he must draw a
part of, from week to week, to live) and
the farm's demands—for feed, wages,
fertilizers, repairs, and what not. That
his family can wear its old clothes, has
no rent to pay and can find its own
meats, vegetables and fruits, does not
change the rule. There are expenses—
even though the teams are paid for or
grew on the place and there is hay and
grain and stable manure enough. A run-
ning farm needs ready cash almost every
day. Besides, any good ship is worthy of
its crew. We must have hired hands to
make our establishment a paying suc-
cess.

Working Capital a Real Necessity.

Nevertheless there is no one factor so
often unprovided for, so overlooked or
madly managed on most farms, as that
of plenty of working capital. And there
is no more foolish "economy" than with-
holding it. It takes money to make
money—on a farm as well as elsewhere.
It merely takes less cash, usually, for a
given return. But both demand for and
return of capital are more irregular, and
thus a safe margin of ready money
more necessary and profitable.

It is a pity, the common dread among
most folks of "borrowing" money. It is
not borrowing—any more than you "bor-
row" a farm hand's services for which
you pay. If the rest of the business

It Is Bad to Owe Many Small Sums.

There is no such clog on prosperity,
as there is no greater stigma upon a
man, than for him to owe small sums to
Tom, Dick and Harry. He should hire
money when necessary, and pay prompt-
ly in cash—the year round.

Another word that is abhorrent to the
unsophisticated is "mortgage", and the
idea of borrowing, notes and other doc-
uments it involves, whereas it is not only
the salvation of thousands—yea, millions
of land owners—but a real boon as at
present written and arranged. The rela-
tively low rates of interest and the al-
ways present amortization provision—
by which the "debt" is in time wiped en-
tirely out—educate the wary to a con-
fidence they greatly need.

It is not true, however, that the Fed-
eral Land Banks can begin to meet the
real demand for farm mortgages that
should be put in force. They set the
pace, and savings banks, trust com-
panies and certain branches of our Na-
tional Banks are rapidly adapting their
managements to reach out for, and bet-
ter accommodate these rural customers
—trying as never before to "be good" to
the farmer.

Every year now, thousands of farm
owners are thus re-capitalizing their bus-
iness, rendering it more secure.

How It Actually Worked in Our Neighborhood.

The story of a farm that recently
changed hands in our neighborhood fur-
nishes a good example of both financial
foreplanning (such as an annual inven-
tory and budgeting are) and how seem-
ing financial improbabilities iron them-
selves out and disappear—when farming
is managed as a business. Even the vital
need of working capital was neither lost
sight of here nor the management crip-
pled by withholding it, as is so constant-
ly the case.

The childless old couple had a once-
good farm that was carrying a neglected
mortgage of \$800. Taxes and wages had
taken all income, until they were slip-
ping. Even the buildings were running
down. The actual land value, orchard
value, and timber values had held firm
or risen, but there was no cash for
working capital, repairs, back taxes, and
you pay. If the rest of the business

A three-year apple test on the Clermont County Farm—

Top-Dressing
Talk No. 4

HERE'S the story of a three-year experiment with nitrogenous fertilizers on apple trees. The test was performed on the Clermont County Farm Orchard, Clermont County, Ohio, during the years 1922, 1923 and 1924, on bearing trees, now 12 years old, under both the grass mulch and the tillage cover-crop methods of culture.

And here are the results as given out by Mr. F. H. Ballou of the Department of Horticulture, Ohio Experiment Station:

Three-year averages—Yield in Pounds per tree

	Fertilizer per Acre	Grass - Mulch	Tillage - Cover-Crop
No fertilizer		86.7	80.8
Nitrate of Soda	160 lbs.	221.4	219.4
Sulphate of Ammonia..	128 lbs.	250.6	295.1

Note: An additional 4/5 pound of Sulphate was applied to each Sulphate tree, scattered under the outer branches, and an additional 1 pound of Nitrate was applied to each Nitrate tree in the same way.

Acid phosphate at the rate of 200 lbs. per acre was applied to all plots. Varieties tested were Gano, Rome, Jonathon, Grimes, Stayman and York Imperial.

The test demonstrates two things:

1. That nitrogen is profitable on apple trees.
2. That Sulphate of Ammonia is as good or better than any other quick-acting form of nitrogen for apple trees.

Apply these methods to your own orchard. Our free bulletins will tell you how. Write for them!

What Readers Want to Know Short Items from the Everyday Business

Will you please tell me when it is best to begin fighting cabbage maggots?—J. N. D., New York.

THE adult fly of the cabbage maggot begins to make its appearance just about the time the European plum comes into full bloom. According to the New York State Experiment Station, this is a critical time for the successful treatment of cabbage seed beds with corrosive sublimate. One of the principle reasons why growers sometime fail to get results with this method is that they fail to make the application in time to check this early infestation.

The first application should not be made until the plants are well through the ground. To be effective it must not be delayed more than one week after the plants appear, and this coincides quite closely with the blooming of European plums.

The corrosive sublimate solution is prepared by dissolving one ounce of corrosive sublimate in 10 gallons of water. This should be applied in a solid stream immediately about the base of the plants. One gallon is said to serve about 30 feet of row. The use of this chemical is estimated to add 18c to the cost of growing 1,000 plants. One precaution that should be born in mind is that corrosive sublimate is a dead'y poison and therefore should be well guarded.

If the seed bed has been well guarded and there is little danger of maggot infestation, it may only be necessary to use this control after the plants have been set in the field. It has been found that three applications at weekly intervals will work wonders in sections where the fly is bad.

A convenient way to apply the chemical is to use a watering or sprinkling can. Into the end of the spout force a wooden plug or cork which has a small hole in it allowing on a small stream to play on the plant.

Raw Potatoes As Cow Feed

I would like some advice relative to the use of raw potatoes as a cow feed. We have a large quantity of small potatoes we would like to use up if they do not have a bad effect.

Potatoes are not considered a very desirable cow feed. A very heavy allowance of potatoes produces milk and butter of poor flavor. Furthermore the butter of potato fed cows is savy. This is particularly true where tubers are fed. It is claimed that between 30 to 35 pounds per head per day is the limit of cooked potatoes. Where raw potatoes are fed the quantity should be somewhat less.

It has ben found by investigators that the dry mater in corn silage is superior to that in raw potatoes. Cows will eat potatoes readily, but at 15c a bushel, they are more costly than corn silage. In feeding potatoes, the precaution should be taken to remove all sprouts if the tubers have sprouted. Sprouts of stored potatoes contain considerable solamin, a poisonous compound which makes it necessary to remove the sprouts. It is possible to use potatoes as a stock feed, for instance, for dry cattle. But it has its limitations with milking stock.

Tanning Horse Hide

Please tell me how much sulphuric acid to use in tanning a horse hide? How much is used per gallon of water? (Bert Silliman, Schuyler county, N. Y.)

For the avrage size cow or horse hide, it takes about 1½ pints of sulphuric acid to make the quick tanning process. For highly finished goods this process is not applicable, but for all general purposes it is quick, economical and useful under average farm conditions.

The 1½ pints of sulphuric acid is slowly poured into 1½ pints of soft water. Hard water is not so well fitted for the purpose. The hide with the flesh side up, is placed on a table or floor and thoroughly washed on the flesh side

with the mixture of acid and water. Be very careful not to get the mixture on clothing or hands. Tie a cloth or sponke securely around a stick and use this to apply the acid mixture.

Removing the Acid and Salting

When the flesh side has been thoroughly covered with the acid, fold the flesh sides together and allow it to remain for only 20 minutes. Then take a solution of soda and water which has been previously made ready by adding 1 pound of soda to 16 quarts of water. Allow the skin to soak in this mixture for two hours. After this the hide is washed in lean water and a small amount of dry salt applied; the hide is allowed to remain in the salt for 12 to 15 hours.

After remaining in the salt, the flesh is removed, then the hide is again allowed to soak for a few minutes in water. On the flesh side an oil is applied such as any of the oil mixtures used in oiling raw hide, and the skin is ready to hang up to dry. In order to prevent stiffness and to keep it soft and bright, the hide is worked well while drying and when thoroughly dry it is ready for use.

Tanning Hides with Hair On

Hides may be tanned with the hair on by placing them for one-half to two hours in a solution of 3 pounds carbonate of soda, 3 ounces nitrate of potash, 3 ounces common salt, 3 ounces prussiate of potash, 3 ounces sugar of lead and 3 ounces of copperas in 9 gallons of water. The hide is removed carefully, rinsed in cold water, and the flesh side softened by repeated treatment, 1 quart fish oil, 1 ounce borax, 4 ounces alcohol and 2 quarts hot water. ment with a mixture of 1 gallon soft Dog skins treated in this way make servicable robes, and it is difficult to find a more beautiful rug than the tanned hide (with hair) of a Galloway.

Building Up the Worn-out Pasture

We have received a number of inquiries of late relative to the use of ground limestone and acid phosphate for bringing up old pasture lots. What is the recommended practice on this? Our pasture is rapidly going into Devil's Paint brush.

A spring dressing of limestone and acid phosphate along with a light seeding will work wonders with the old pasture. Broadcast the limestone and acid phosphate at the rate of 2,000 pounds of the former and 200 to 300 pounds of the latter to the acre. Harrow, if the land will permit, and scatter nine pounds to the acre of this mixture; Alsike clover, 1 pound; white clover, 2 pounds; Kentucky blue grass, 2 pounds; orchard grass, 2 pounds; redtop, 2 pounds.

According to the College of Agriculture authorities every acre of New York soils devoted to the production of field crops should receive acid phosphate at a rate equivalent to 200 pounds an acre yearly. Land in vegetable crops should receive even more liberal application. It takes 400 pounds of a mixed fertilizer containing 8 per cent phosphoric acid to equal the phosphoric acid supplied by 200 pounds of acid phosphate. Ammonia and potash may be considered in addition to this acid phosphate application, but these constituents should not replace the phosphoric acid and thereby lessen the application below the equivalent of 200 pounds of acid phosphate to the acre. Up to this amount, acid phosphate will return greater profit on the investment than will ammonia and potash.

If you add a tablespoon of kerosene to each gallon of water when washing linoleum it will look like new.

What the Market Wants

Apple Varieties Most in Demand

By C. L. BROWN

THE season of the year when fruit growers get out their nursery catalogues and choose varieties for spring planting is here again. The same puzzling problem of what varieties to plant must be faced once more. The right or wrong answer will determine the profits of the fruit grower ten or twenty years from now.

Two of the commonest mistakes growers make is to grow too many varieties and to grow something which is easy to grow instead of what the market wants. The modern apple grower should keep closely in touch with market requirements if he expects to make a success of his business. In the last few years there has been a big shift in market requirements and the grower who makes a bad guess is likely to take a loss.

Western Growers Have Standardized Varieties

The foregoing discussion covers eastern varieties only because western varieties have already been standardized by the western fruit men. The writer noted approximately 100 varieties of apples on the Chicago market in 1920-21 of which not more than 20 were commercially important. The same condition prevails in New York City and every other large market. It is of interest to note in this connection that over three fourths of the varieties were from eastern growers and that they took big losses on the old varieties.

In order to be a success on the large markets of the country a variety must have certain qualities. First of all it must either be a good table or dessert fruit or else it will not be likely to last long in popular favor. Next in importance is a good, bright red color unless it is a green or yellow apple. And lastly, it should be of good size. For most purposes an apple which will readily grade 3 inches is much better than one grading 2½ or 2¼ inches. As to color, take for instance the so called red varieties which do not have bright red color. The Rambo, and Seek-No-Further are good apples but they are growing less important every year largely because of dull color. Of course the smaller markets are less particular about color if a variety has high quality and is well known but this does not hold true with the large markets.

Consumers Appreciate Good Fruit

For some reason growers hold to the opinion that the city consumer does not appreciate and recognize quality. This is not true. Consider the eastern apples which are in highest favor and practically every one of them is either a good cooking or dessert apple or else can be used acceptably for either. The Ben Davis is often pointed out as a variety of no value which is popular, but it should be noted that it has two of the attributes of a market variety, namely: good color and size. And in its proper season it has fair quality.

The tendency in modern merchandising as in everything else is toward standardization. The retailer does not want to be bothered with products which are not readily recognized by his trade. The apple grower has got to fall in line with this movement.

The average city housewife is by no means a pomologist and is not likely to become one. Neither is she inclined to experiment. If she sees a variety which looks good she may try it but the chances are she will stick to the proven varieties. In the last analysis her judgment decides what can be grown at a profit. Her word is final on apples, or for that matter, any other food product.

A Disadvantage to the Grower

From the grower's standpoint there is a great disadvantage in splitting up plantings among too many varieties. Spraying schedules are disarranged and cultural problems

are increased. But most important of all is the fact that it is

difficult to market odd lots. A good rule for the commercial grower to follow is never to plant less than enough to make a carlot when the variety comes into bearing. The selection should be confined to not more than three or four varieties. These varieties should be adapted to his locality and they should be acceptable to his markets.

Desirable Varieties

It is difficult to lay down any definite list which should be planted but for growers east of the Mississippi River the selection for commercial orchards should be made from the following list, bearing in mind which varieties grow well in the locality: Baldwins, Greenings, McIntosh, Cortland, Northern Spy, Ben Davis, Wealthy, Jonathan, Winesap, Stayman, York and Albemarle Pippins. To this list might be added Yellow Transparent for the early market and Delicious for the early winter market where it succeeds. Varieties like the Dutchess of Oldenburg, Alexander and Wolf River are too poor in quality to justify further plantings and varieties like Kings and Grimes Golden are too uncertain in growth to justify planting except in favored regions.

Now as to new varieties. It is always risky to plant them extensively until they have been thoroughly tried out in a small way. If they lack in bright red color one can be fairly certain they will not be commercial successes, regardless of their merits, unless of course, they are of a green or yellow variety which do not take on red color. It is well nigh impossible nowadays to develop a demand for a poorly colored apple in the face of competition from first class highly colored ones.

One thing is certain and that is this: Either the eastern apple grower is going to concentrate on fewer and better varieties or he is going to hand over his business to the western apple grower.

Prune Grape Vines Now

BEARING grape vines must be pruned every year if a profitable yield is to be secured.

This work is usually best done during February and March while the vines are still dormant, says J. H. Clark, of the New Jersey State College of Agriculture. "A heavy pruning is necessary to stimulate vigorous wood growth.

"The amount of old wood left at pruning time should be no more than is necessary to act as a support to the producing canes. In the Kniffin system of training, which is recommended for New Jersey, a single trunk extends to the top wire of the 2-wire trellis. Four vigorous, one-year old canes, a little above the average in length and starting as near the trunk as possible, are selected to produce the crop. These should be so located that one cane can be tied in each direction along the wire. Each of these canes is cut back to 8 or 10 buds, depending on the vigor of the vine, making a total of 32 to 40 buds on the entire plant.

Results in Better Production

"This number of buds distributed over 4 canes will produce more fruit than the same number of buds on spurs, each bearing only 2 to 4 buds. Since the canes which bear fruit one year are removed the next, some provision must be made for renewal. This is provided for by selecting 4 other canes as close as possible to where renewal canes will be wanted a year later, and cutting them back to spurs of 2 buds each. All remaining canes are then removed entirely.

"These recommendations can easily be applied to other systems of training. The removal of as much old wood as possible and keeping 30 to 40 buds on 4 or 5 one-year old canes to produce the crop are the essential points."

Green's Trees, Shrubs Vines

NEW CORTLAND APPLE

Have Some Cortland Apples!

Winner of the Wilder Silver Medal for new fruits! Dr. U. P. Hedrick of the N. Y. Experiment Station says: "The Cortland cannot be surpassed by apples grown anywhere in the world. It is an improved McIntosh." A wonderful new apple as a big profit maker in the orchard and a delicious, healthful fruit for your own table. In offering the Cortland, old reliable Green's Nursery again shows its leadership in supplying the finest varieties. These include over

It gives in detail valuable pointers on all Farm Seeds. A real help to beginners with Alfalfa, Soy Beans, All Clovers, and many other field crops.

John Shutt teaches his dad a lesson in spud growin'—

Mr. Shutt thought he knew a lot about growing potatoes, but his son John taught him a profitable lesson. This is how he did it:

On the Shutt farm in Garrett, Indiana, father and son each raised a crop of potatoes on adjoining plots of land. John used certified seed and plenty of high analysis complete fertilizer, while his dad used common seed and no fertilizer.

When the crops were dug, Mr. Shutt could hardly believe his eyes. His son dug up 227.6 bushels to the acre at a cost of 36 cents per bushel, while Mr. Shutt himself obtained only 75 bushels per acre at the high cost of \$1.13 per bushel. Thus, John proved to his dad that good seed plus complete fertilizer results in higher yields at lower cost per bushel.

New York State farmers will be interested in the experiment

made by J. H. Griffin of Columbia County, N. Y. This grower raised potatoes on a gravelly loam with clay subsoil fertilized with 1,000 pounds per acre of a 3-6-11 mixture. Crop results showed that when the 11% potash was left out of the fertilizer the yield was 55½ bushels less. In other words, the addition of 11% potash from sulfate increased the yield 55½ bushels per acre.

The results of many experiments show that 80 to 100 pounds per acre of actual potash applied with nitrogen and phosphoric acid give profitable returns. Use the right amount and the right kind of potash in your potato fertilizer this season. Potash Pays!

FREE: Our new booklet, "Better Potatoes," contains a lot of helpful information on potato growing. It is being sent to potato growers free of charge. Write for your copy now.

Otsego County and Some Ancient Villages

(Continued from page 143)

or two all was over. The thriving village with its houses and barns was in flames, very many of its inhabitants lay dead amid the ruins and the exultant foe was swiftly on his way down the valley carrying many captives, most of whom were subsequently released.

History has not failed to preserve many details of that fateful day. The wife of the village pastor was killed as she stood in the door of her home with an infant in her arms and her large family entirely wiped out save one little girl who by happy chance was away at school in Schenectady. Tradition adds the particularly gruesome detail of how her arm severed from her body was tossed into an apple tree where it caught and hung. Today a monument with appropriate inscription marks the site of the home of this gently reared woman of Colonial days.

Two or three days after the attack, the survivors crept back to the place where the settlement had been and gathered "above forty" bodies which were buried in a common grave within the log stockade. A century later, I as a little lad, was one of the great outpouring of people who gathered at the unveiling of the marble monument which marks the sacred spot.

School boys of many generations yet unborn will read in the history books of the "Cherry Valley Massacre" and it is along with the burning of Schenectady the most lurid incident of our early New York history although the number who perished was not nearly so great as in the Wyoming Massacre in Pennsylvania. Now and again through the years I find myself in Chery Valley and almost never, summer or winter, do I fail to go down the street past the little Presbyterian church and turn in through the cemetery gate and do homage for a little to those men and women who died so pitifully and so tragically that gray November day.

Cooperstown The Beautiful

And then there is Cooperstown lying at the foot of Otsego Lake not so many miles away. Possibly one might class this as one of the Finger Lakes but I do not think of it in that way for it lies too far east—too remote from the Finger Lake sisterhood. Moreover there is the distinction that all the Finger Lakes flow north and their waters finally find their way into the St. Lawrence but Otsego is the source of the Susquehanna.

One might write a long story concerning Cooperstown for it has been a famous place since Revolutionary days. In 1875 Judge Cooper, father of the novelist came to Cooperstown and it is said that when he arrived at Mount Vision he climbed a tree in order that he might overlook his possessions. He was the proprietor of a great barony of 40,000 acres of land which he proceeded to survey and cut into farms and sell to the settlers that just at this period were literally flocking into this region. The venture proved a very profitable one. In course of time the judge built him a big country mansion or manor-house where he lived like an old time feudal lord.

How To Lose Money

With the years the beauty of the village and the lake has brought to Cooperstown a number of families of great wealth and in the vicinity are some very wonderful estates—an "estate" to my mind being a so-called farm which is conducted wholly without reference to any relation between income and outgo. Two or three of these estates are marvelous of how much money and architectural beauty may be lavished upon a shelter for cows. To me this type of farming is an interesting example of one of the methods by which very rich men manage to get painlessly parted from superfluous dollars.

But I suppose that Cooperstown's real claim to remembrance rests most of all upon the fact that hither as a baby of thirteen months came the man who was destined to become the first great American novelist. James Fenimore Cooper grew up here. In his leisurely youth he cruised all over the lake and came to know every little bay and every sandy point and he became the familiar friend of the disappearing Indians who still came to fish in its waters. In some of his books he has written of the lake under the name of Glimmerglass and somewhere he fondly calls it "The Smile of God". Coopers works have been translated into many European languages and so the fame of this New York lake has literally gone around the world.

Sir William Johnson and The Indians

Yet after all when I come to think of the noteworthy towns of the county of Otsego, I somehow feel that it is Old Unadilla which above the extreme has achieved the romance of history for this village was once the extreme western output of civilization on the New York frontier. Bad as may be the record of the white man's dealings with the Indians yet it is pleasant to remember that sometimes there were examples of justice and fair play. In our New York history the outstanding example is the course of that wise diplomat and great Faith-Keeper Sir William Johnson. In 1768 he met with the Indians at Rome in Oneida county and after much giving of gifts and speech-making and feasting and exchanging of compliments he negotiated the Treaty of Fort Stanwix in accordance with which and in consideration of the payment of about \$50,600, the Indians relinquished for ever all interest in the land lying east of a line commencing at Rome in Oneida county and hence south following the course of the Unadilla river to its conference with the Susquehanna and then on over the hills to Deposit on the Delaware. In return, the white man promised not to interfere with Indian sovereignty west of this line. Thus it was that until after the Revolution no man legally colonized beyond, but of course this treaty like another much more recent and famous "scrap of paper" was forgotten in the smoke of the Revolutionary conflict.

Even so, it is interesting to note that today the western boundary of Otsego county is formed by this old treaty line.

I imagine that when this treaty was negotiated both sides felt they had driven a good bargain. Sir William doubtless felt that he had secured all the land the English would ever need while the Indians on their part consid-

WHIR!

"Oh, aye, sir; but I misdoot they flew awa' wi' the bir-rd!"—PASSING SHOW (London),

Otsego County and Some Ancient Villages

ered they were receiving perfectly good money for the surrender of an insignificant portion of a boundless inheritance.

So it was that at the close of the war, Unadilla by virtue of its position became the jumping off place for further western colonization and the story of the village for many years has in it all the thrill of a great adventure.

The Romantic Catskill Turnpike

It seems that at a very early date some adventurous pathfinder had blazed a trail almost due west from Catskill on the Hudson running through the mountains by well selected grades and finally coming down the valley of the Outlet and striking the Susquehanna at the point where Unadilla now lies. As early as 1785 this trail was cleared and widened to permit the passage of ox-carts and wagons and was christened the Catskill Turnpike. Then to its terminus at the river came one Wattles who must have been a seer of the future and a Napoleon of commerce for he built him a ferry scow whereby the traveler and his goods might be set across the stream, a tavern where he might refresh himself and lie the night a mill where he might grind his corn and a store where he might be outfitted for his journey. Thus he founded the city and Wattles' Ferry became a station famous for a hundred miles. It was the terminus of two turnpikes Eastwardly the pike stretched away to the Hudson valley where civilization was already relatively old and rich and substantial. Westwardly the road ran to Ithaca and on into the Southern Tier and along this road for a third of a century streamed a great procession going on into George Duff's country and beyond.

Walking In Bye Gone Days

So sometimes when I come to Unadilla the ghosts of bye gone days walk for me and where as my friend sees only a long pleasant street of old fashioned houses under old trees and close at hand the placid river sliding by—I see more. For I see Old Unadilla when it was still Wattles' Ferry in its lusty youth on a morning of early summer in the first years of the century behind and the lovely river running bright and full and clear goes slipping past on its way to the sea and down the long trail from Catskill on the Hudson comes a procession—a procession that never wholly ceased for the third of a century. It is the second coming of the Pilgrims. It is the Puritan on the march. It is the sons and daughters of New England swarming forth to, people the wilderness of southern and western New York. It is the exodus of a dauntless race seeking hazard of new fortunes in unknown lands. These are the people who a generation later will colonize the Western Reserve of Ohio—whose grandchildren two generations later will drive the prairie schooner into the corn belt and beyond. Never since time began has there been such an all-conquering race as the New England Puritan and they are marching almost in solid phalanx to cross the Susquehanna and Wattles' Ferry.

The Migration Of A People

So I watch the slow train file past. For every family there is a wagon and an ox team and most of the men are still in their first prime and their wives have babies at their breasts, and each wagon is bursting with household stuff—with chests filled with cloth of flax and wool woven on the old home farm—with the meager furnishings for a pioneer home, and there is a plow and a hoe and a scythe and a cradle for the harvest and another sort of cradle for the babies that will be. And because they are New England men, in the chest are a few worn books and always a Bible being carried into the wilderness like the Ark of the Covenant Yea: and

in their breasts there are other possessions which will not in the least degree laden down the ferry boat for they carry the charters of unbuilt cities and free schools and Congregational churches and town meetings and free institutions and all the ideals of a people who cannot be discouraged or made afraid. And behind and beside the wagons are driven their flocks and herds and they come down to the waters edge and await their turn to be set over to the other side.

And I hear the shouts and calls of the ferry men as they pull the scow back and forth across the stream and one by one the wagons go down and are set across and as they touch the other shore the drivers shout to their team and the whips crack and the wagons creak as the patient, straining beasts drag them up the steep farther bank and they take up the march for the pioneer village of Ithaca at the head of the lake.

Those were the halcyon days of Unadilla. She boasted more than 800 inhabitants in the early years of the past century and there are hardly more today. To me it will always be one of the most noteworthy and charming villages of our state. The years have brought to it not growth in numbers or commercial importance but rather I think serene and mellow maturity and dreaming memories of a golden youth.

Out of the Editor's Mail

(Continued from Page 145)

benefits to be derived from out of door work suited to her strength. Many a woman is ill in body and mind when just outside her door are to be found the change of work, the life-giving oxygen and the marvelous beauty, the proper use of which will restore health to the nervous and anaemic in a very large percentage of cases. May we not with impunity, sacrifice some of our so-called duties and in their stead take some physical culture in the wonderful out of doors? No painted picture equals the beauty of those views on your farm; no higher education equals the love of nature which you may inculcate in your developing boy and girl; no housekeeping is so important as that concerning the care of the temple of your soul.—A farmer's wife and daughter, Mrs. J. E. Van Auken, New Jersey.

Massachusetts Fruit Growers' Annual

DAVID STONE KELSEY

In connection with the seventh annual union meeting of the Massachusetts agricultural interests, embracing nineteen organizations, the State fruit growers carried out a very ambitious two-day program. It was "ambitious" of the apple man at least! one wag moved that the name be changed to "Massachusetts Apple Growers' Association," for the word "apple" appears in a quotation on the first page of the program, in four of the five titles of the first session, and altogether formed the principle topic of nine out of a possible fifteen numbers on the program.

Perhaps the most prominent figure in the convention was Dr. J. K. Shaw of the Massachusetts State Experiment Station, whose discovery of, and success with practical methods of identification of nursery stock by their leaves is revolutionizing both the nursery business and one of the principal risks in commercial orchard planting.

Another intensely interesting feature was the paper of Dr. U. P. Hedrick of the Geneva Experiment Station, New York, that included reports upon a series of apples of the McIntosh type (headed by the new Cortland) that are being developed to supply the market in succession from October to March with this delicious fruit.

The complete staff of old officers was re-elected, which amounts to a hearty endorsement of their services.

Zinc Insulated

NATIONAL FENCE

The superior quality of Zinc Insulated National Fence and Banner (formerly Arrow) Steel Posts has long been proved by the only real test of fencing—time and service.

Zinc Insulated National Fence, each wire with its heavy coating of zinc, uniformly applied, to resist rust, has successfully withstood all kinds of weather conditions. Banner Steel Posts, with their railroad rail design, and large slit wing patented anchor plates, root firmly into the ground, hold the fence securely in line and give many years of service.

Both are sold at NO EXTRA CHARGE. Together they offer the most economical and most dependable fence you could own, giving many more years of service at lower cost per year. Ask your dealer.

2226-2228-2230-2232-2234-2236-2238-2240-2242-2244-2246-2248-2250-2252-2254-2256-2258-2260-2262-2264-2266-2268-2270-2272-2274-2276-2278-2280-2282-2284-2286-2288-2290-2292-2294-2296-2298-2300-2302-2304-2306-2308-2310-2312-2314-2316-2318-2320-2322-2324-2326-2328-2330-2332-2334-2336-2338-2340-2342-2344-2346-2348-2350-2352-2354-2356-2358-2360-2362-2364-2366-2368-2370-2372-2374-2376-2378-2380-2382-2384-2386-2388-2390-2392-2394-2396-2398-2400-2402-2404-2406-2408-2410-2412-2414-2416-2418-2420-2422-2424-2426-2428-2430-2432-2434-2436-2438-2440-2442-2444-2446-2448-2450-2452-2454-2456-2458-2460-2462-2464-2466-2468-2470-2472-2474-2476-2478-2480-2482-2484-2486-2488-2490-2492-2494-2496-2498-2500-2502-2504-2506-2508-2510-2512-2514-2516-2518-2520-2522-2524-2526-2528-2530-2532-2534-2536-2538-2540-2542-2544-2546-2548-2550-2552-2554-2556-2558-2560-2562-2564-2566-2568-2570-2572-2574-2576-2578-2580-2582-2584-2586-2588-2590-2592-2594-2596-2598-2600-2602-2604-2606-2608-2610-2612-2614-2616-2618-2620-2622-2624-2626-2628-2630-2632-2634-2636-2638-2640-2642-2644-2646-2648-2650-2652-2654-2656-2658-2660-2662-2664-2666-2668-2670-2672-2674-2676-2678-2680-2682-2684-2686-2688-2690-2692-2694-2696-2698-2700-2702-2704-2706-2708-2710-2712-2714-2716-2718-2720-2722-2724-2726-2728-2730-2732-2734-2736-2738-2740-2742-2744-2746-2748-2750-2752-2754-2756-2758-2760-2762-2764-2766-2768-2770-2772-2774-2776-2778-2780-2782-2784-2786-2788-2790-2792-2794-2796-2798-2800-2802-2804-2806-2808-2810-2812-2814-2816-2818-2820-2822-2824-2826-2828-2830-2832-2834-2836-2838-2840-2842-2844-2846-2848-2850-2852-2854-2856-2858-2860-2862-2864-2866-2868-2870-2872-2874-2876-2878-2880-2882-2884-2886-2888-2890-2892-2894-2896-2898-2900-2902-2904-2906-2908-2910-2912-2914-2916-2918-2920-2922-2924-2926-2928-2930-2932-2934-2936-2938-2940-2942-2944-2946-2948-2950-2952-2954-2956-2958-2960-2962-2964-2966-2968-2970-2972-2974-2976-2978-2980-2982-2984-2986-2988-2990-2992-2994-2996-2998-3000-3002-3004-3006-3008-3010-3012-3014-3016-3018-3020-3022-3024-3026-3028-3030-3032-3034-3036-3038-3040-3042-3044-3046-3048-3050-3052-3054-3056-3058-3060-3062-3064-3066-3068-3070-3072-3074-3076-3078-3080-3082-3084-3086-3088-3090-3092-3094-3096-3098-3100-3102-3104-3106-3108-3110-3112-3114-3116-3118-3120-3122-3124-3126-3128-3130-3132-3134-3136-3138-3140-3142-3144-3146-3148-3150-3152-3154-3156-3158-3160-3162-3164-3166-3168-3170-3172-3174-3176-3178-3180-3182-3184-3186-3188-3190-3192-3194-3196-3198-3200-3202-3204-3206-3208-3210-3212-3214-3216-3218-3220-3222-3224-3226-3228-3230-3232-3234-3236-3238-3240-3242-3244-3246-3248-3250-3252-3254-3256-3258-3260-3262-3264-3266-3268-3270-3272-3274-3276-3278-3280-3282-3284-3286-3288-3290-3292-3294-3296-3298-3300-3302-3304-3306-3308-3310-3312-3314-3316-3318-3320-3322-3324-3326-3328-3330-3332-3334-3336-3338-3340-3342-3344-3346-3348-3350-3352-3354-3356-3358-3360-3362-3364-3366-3368-3370-3372-3374-3376-3378-3380-3382-3384-3386-3388-3390-3392-3394-3396-3398-3400-3402-3404-3406-3408-3410-3412-3414-3416-3418-3420-3422-3424-3426-3428-3430-3432-3434-3436-3438-3440-3442-3444-3446-3448-3450-3452-3454-3456-3458-3460-3462-3464-3466-3468-3470-3472-3474-3476-3478-3480-3482-3484-3486-3488-3490-3492-3494-3496-3498-3500-3502-3504-3506-3508-3510-3512-3514-3516-3518-3520-3522-3524-3526-3528-3530-3532-3534-3536-3538-3540-3542-3544-3546-3548-3550-3552-3554-3556-3558-3560-3562-3564-3566-3568-3570-3572-3574-3576-3578-3580-3582-3584-3586-3588-3590-3592-3594-3596-3598-3600-3602-3604-3606-3608-3610-3612-3614-3616-3618-3620-3622-3624-3626-3628-3630-3632-3634-3636-3638-3640-3642-3644-3646-3648-3650-3652-3654-3656-3658-3660-3662-3664-3666-3668-3670-3672-3674-3676-3678-3680-3682-3684-3686-3688-3690-3692-3694-3696-3698-3700-3702-3704-3706-3708-3710-

HELP her through the dangerous strain at Calving—

Calving—the strain of reproduction—is a severe test for the vital organs of even the most vigorous dairy cow. In the shock and stress of this critical period lurk many hazards to health and milk-giving.

The genital and digestive organs, carrying this great added burden, need help—invigorating medicinal assistance. Otherwise there is a breakdown. Diseases and disorders creep in and the productive capacity of the cow is threatened.

To carry a cow safely through calving, nothing could be more satisfying in its results than the invigorating help of *Kow-Kare*. A tablespoonful in the feed twice a day for two weeks before, and two or three weeks after, works wonders.

Kow-Kare contains the medicinal properties to build up the genital and digestive organs to top notch vigor. A slight investment to assist nature

will repay you with a healthy, productive milker and a vigorous calf.

More Milk Assured

A tablespoonful of *Kow-Kare* twice a day, one week in each month will bring many added dollars in your monthly milk check. The strain of winter feeding needs this invigorating medicinal offset right now. Try this plan on all of your cows and note results.

Banish Disease

Such cow ailments as Barrenness, Abortion, Retained Afterbirth, Scours, Garget, Milk Fever, Lost Appetite, etc., result from run down digestive and genital organs. *Kow-Kare* successfully treats these disorders because it builds up the key organs and makes them function as nature intended. At the first sign of cow ailments, let *Kow-Kare* be your "home cow doctor."

BAG BALM

insures a healthy udder

Keep on hand a can of Bag Balm. A great healing ointment for Caked Bag, cuts, scratches, chaps and hardened tissues.

Big 10 oz. pkg. 60c

Send for this Free Book

We publish a free book on the home treatment of cow ailments. Write us today for your copy of "The Home Cow Doctor." Its timely aid may save you hundreds of dollars.

Feed dealers, general stores and druggists sell *Kow-Kare* in \$1.25 and 65c sizes. Send direct to us if you fail to find it locally.

DAIRY ASSOCIATION CO., Inc.
Makers of Bag Balm, Garget Remedy, Horse Comfort
LYNDONVILLE, VT.

ECONOMY SILOS

Made absolutely permanent by our patented Storm-proof Anchor System. Built of the very best materials. Will last a lifetime. Write for catalog and prices.

"I'm 'appy With the Sheep"

The Shepherd Really Makes His Breed

A B R O O M E

County reader of

AMERICAN AGRICUL-

TURIST who classified himself as a

"sprightly boy of 65" and who has about

180 Shropshire sheep let out on farms

in his locality takes me somewhat to

task for keeping the type of sheep that

I raise—for as he says in his letter—

"But, say, Brother, I've a sneaking no-

tion that a gentleman about your size,

once hinted pretty nicely that with

Shropshires, I was doing about as well

could be done. But that recollection

rather causes me to wonder at your

letterhead and think "How Come?"

The wide spread popularity of the

Shropshire breed of sheep is sufficient

proof of their merit. Wherever condi-

tions are such that sheep can be kept

in small flocks and given sufficient at-

tention, the Down breeds cannot be

surpassed. The Down breeds were de-

veloped in a country where sheep are

not neglected, where land is valuable,

and where there has been plenty of

contented help to care for the needs of

the sheep. This statement causes me to

recall to memory my old friends, Jim

Taylor, the English shepherd who had

charge of the lambing barn at Walnut

Hall stock farm in Kentucky—this faith-

ful caretaker of sheep had no desire to

visit the city of Lexington for as he

would say—"I'm 'appy with the

sheep" and he it was who started many

a droopy lamb on its way to a robust

future.

Downs Are Very Popular

The Down breeds are very popular in the middle west and it is getting to be more and more the practice to lamb the ewes early in order that the lambs can be marketed at four months of age before the hottest summer months are not expected to gain during that period. Many middle-west farmers buy western ewes containing Merino blood and cross with Down rams—returning the ewes to the market after a few lamb crops and getting a fresh bunch of western ewes.

Regardless of breed or breed history when a type of sheep has been bred and raised in a locality for several generations they become the product of their own environment and develop characteristics and qualities of their own. I have before me a picture of a ewe of apparently Oxford Down ancestry standing beside her four half-grown lambs, 2 males and 2 females in perfect condition. The ewe was bred and raised by L. L. McGlasson, Constance, Kentucky.

Who is there that has a liking for sheep who can but admire such an animal? Regardless of breed this ewe has the qualities of a real productive breeding ewe. She shows in her face that she has intelligence, and the alertness that reveals the nervous organization necessary to take care of her lambs well. She has constitution and the capacity to convert feed and pasture into milk. She is an active sheep—her bone is of good quality and strong. She probably is not a heavy shearing ewe but with all these other qualities, we can overlook this important item.

Where a Grazing Sheep Does Best

Many of us interested in sheep husbandry in New York and adjacent states have considerable rough pasture land growing native-grasses and many sheepmen with large flocks do not want lambs to come before May first. Therefore a grazing sheep is wanted, one that will do well if conditions are not the best and one whose lambs will keep growing through trying periods.

A good many years ago a breed of sheep was developed in Spain and they became so important that it was a crime punishable by death to take a Merino sheep out of Spain. They were known

MARK J. SMITH

as the sheep, that travelled—summers were graze in the mountains in Northern Spain—each fall they were driven back to Southern Spain to their winter quarters. The weak individuals had to drop out—the strong and long-lived survived. They were crowded in large bands that had to live on what herbage they could find as they travelled.

The Modern Merino

It is no wonder that the Merino breed of sheep developed into a hardy, long-lived grazing sheep with the flocking or gregarious instinct very pronounced. In the old days wool was the main consideration. But the modern-day Merino of the mutton type has a blocky conformation, still retaining a heavy fleece of high quality wool. Because of these commercial qualities of constitution, flocking instinct and long life, over fifty per cent of the blood of the world's sheep is Merino. The right type of Merino ewes are good milkers for the Merino blood in the popular so-called cross bred-lambs is on the mother's side. Cross-bred mutton from New Zealand has long been famous.

Talkativeness is fraught with dangers. Recently in conversation with a friend an excellent sheepman caretaker, I made the statement that Merino sheep could get along with less care than some other breeds and that I thought some men were more adapted to Merino sheep than others. I wound up by saying that I thought he was noticeably a Merino man. He looked at me a moment and then said—"You mean by that that I do not take good care of my sheep?"

New York Wool Pool A Money Maker

WOOL producers in New York State who have sold their clip cooperatively through the New York State Sheep Growers Cooperative Association, Inc., have enjoyed steadily rising prices since 1920. In the season 1920-1921 the average gross price received for all wool was 36.3 cents; in 1922, 45.3 cents; in 1923, 49.5 cents, and in 1924, 53.5 cents per pound.

The report of F. E. Robertson, general manager, at the recent annual meeting of the association in Syracuse, showed that during the past year 477,883 pounds of wool was pooled, compared with 473,990 pounds in 1923. During the year past wool was consigned by 1509 producers in every agricultural county of New York State, besides a few consignments from Pennsylvania and Vermont. The Association represents 37 organized county associations.

An Increase Greater Than Interest Costs.

"Some men sell their wool early on the plea that they need the money," says the manager's report. "Generally the advance in wool values as between spring and early summer prices, and those at which our wools have sold later in the season represents an increase of from 30 to 40 per cent. This year spring and early summer prices ranged around 35c per pound. The value of these wools five months later was 50c to 55c per pound. This represents an increase in value of from 40 to 50 per cent. If these early sellers could be shown that it might be to their advantage to borrow money at 6 per cent. and to take the rise in the value of their wool of from 30 to 40 per cent, it might change their ideas of the advantages of cooperating with the other sheep growers."

Mr. Robertson expressed the opinion that wool producers face at least three more years of fairly profitable results, due to world conditions.

The 1924 officers were all reelected for 1925. They are as follows: E. L. Moody, Rushville, president; Wm. R. Putnam, Wayville, vice-president; and Fenton Wagar, Middlesex, treasurer.

When Cows Fail to Breed

A Legal Tangle---When to Dehorn Cows

Enclosed find some correspondence on subject of purchase of purebred cows. In the last ten or twelve years we have bought eight purebred Holstein females as well as three bulls and this is our first experience with a non-breeder among them or their purebred progeny. This cow was bred by us May 4 and 24, June 14, July 6, and Nov. 21. We opened her twice and Nov. 21 got an experienced man to do it. She has had a purulent discharge. She had a number of cysts or tumors when we first opened her. My father attended the sale and bought her. My contention is that every registered animal must be a breeder or no sale. This obligation cannot be voided by any conditions of sale announced orally or in writing at sale. Am I right? If so, please rule accordingly as you see the enclosed letters side-step the main issue. All I want is the difference between \$100 paid for cow and her beef value now or I will ship her back if he prefers or get a statement from a veterinarian.—C. C. B., New York.

YOU have given us a very difficult question to answer. A difference of opinion exists among the courts as to whether or not upon the sale of an animal for breeding purposes any warranty is implied as to its fitness to generate progeny.

Decisions in Three States.

In Indiana, it has been decided that a person engaged in the business of stock-raising and of selling animals for breeding purposes, and who knows the qualities and capabilities of the beasts he has raised, implied by warrants when he makes a sale that the animal is reasonably fit and capable for such purposes.

In Wisconsin, however, it has been held that stock-raisers who sell a bull, although they know the buyer desires it for breeding purposes, if they commit no fraud and make no untrue representations do not impliedly warrant the animal as fit and competent to breed from, even if its price were fixed upon the assumption that it was.

In Maine, too, it has been held that in a contract for a stallion's service no warranty is implied that the animal is free from and will not transmit disease to the colt.

Buyer Should Assure Himself.

The buyer of an animal for breeding purposes should therefore assure himself by exacting an *express warranty*. It has been held that a stallion sold and guaranteed satisfactory for breeding purposes upon an agreement that he may be returned if unsatisfactory, provided he is in as sound and healthy a condition as he was when delivered, may be thrown back upon the seller, although in the interval it has become more unsound by the development and progress of a disease which existed at the time of the sale.

Your correspondence indicates that no guarantee of the cow was made by the seller. The above review indicates that where there is no stated guarantee there is no liability. For a stranger reason, therefore, where the seller states at the

sale that he makes no guarantee he is free from liability. We regret the necessity of reaching this conclusion, and can suggest merely that in the future an express warranty be exacted as a condition of purchase.

Can Non-Breeders Be Brought Back?

I have a blood Ayrshire that came fresh last August and does not show any desire to breed yet. I also have a purebred Jersey heifer that had her first calf in June and she shows no inclination for breeding. She had a very hard time as the calf had to be taken from her. Now both animals are in good flesh and health. Could you tell me what to feed them to bring them into heat? The butcher says to kill them as they will never breed again but they are of such good blood I want to save them if I can. Our veterinarian is a man who does not care to attend to cows and of course he advises beefing them. I would appreciate it if you could give me an opinion.—N. L., New York.

THERE is much discussion at the present time whether any medicines can be administered to bring animals in heat. Many times we find that lack of activity is due to the manner in which the live stock is kept. We referred this inquiry to a prominent live stock man, an expert in his line. He brings out this opinion in his reply.

"Sterility is very common among cattle closely confined and highly fed. If the reproductive organs are diseased the veterinarian should be able to note the fact. To work this out, I would suggest: First, be sure the cows are at fault as many bulls are often temporary sterile. To prove this use a different bull even at the expense of a cross-bred calf. Second, let the cows rough it for a time, giving plenty of exercise so as to reduce in flesh, yet keep them thrifty. Third, having reduced the flesh begin to feed again making conditions as spring-like as possible, giving succulent food as silage, cabbage, or roots and possibly a tonic, say nutritone. During both the reduction and recuperation periods try the bull every few days. Should the cows fail during all this and if they were valuable, I would probably think again."

What is the Best Time to Dehorn a Cow?

I would like to know what is the best time to dehorn a cow? What shall I use to stop the flow of blood? The cow I plan to dehorn is about four weeks from calving. Will it hurt her milking?—E. A. C., Rhode Island.

As far as the season is concerned animals may be dehorned any time with the exception of fly time or when the mercury is liable to drop to the neighborhood of zero. In view of that fact alone, we do not think that this time of the year is particularly good to try the operation.

Furthermore, in as much as your cow is about to give birth to a calf, we think it is just as well that the operation be postponed until a later date. A cow that is heavy in calf should not be unduly excited. In fact, she should have a little extra care. There is no question but what the ordeal accompanying the de-horning would have a detrimental effect on her. It might result in losing the calf, even to the point of endangering her own health.

Some farmers do not use anything to stop the flow of blood with the exception of cold water. That is the only dressing that is really needed. Some use cobwebs to stop the flow, while others use chemicals with astringent properties. It is usually a good idea to deprive the animal of food for twelve hours before operating.

Salt Batter for Caked Udder

In reply to the question asked about caked udder, will say that we have just had the same experience with a heifer and found that salt butter is the best thing ever used when all others failed. The butterfat softens the udder and the salt is excellent for inflammation.—Homer, New York.

Read what these

New York Dairymen say about their De Laval Milkers

"My De Laval Milker is doing fine work. It has given me no udder trouble whatever. I am making Grade A milk for Borden's. Premium on Grade A amounting to \$512.00 in 11 months. No more hand milking for me." E. C. HARRINGTON, Tunnel.

"We have used the De Laval Milker every day for 3½ years, and consider it the most help of any machine. Have had less udder trouble than formerly with hand milking and believe our increased production has been due largely to the milker."—J. M. HAM & SONS, Hillbrook.

"We have been using the De Laval Milker for six years and find it satisfactory in every way. It pleases the cows and has never given us any trouble in any way."—CHAS. LOWE, Hyndsville.

"I have a herd of 15 cows—Holstein and Jersey, also farm about 60 acres of land—myself and hired man. I do all the milking alone and care for my cows. If I had to part with any machinery, the De Laval Milker would be the last to go. Take it as it is, the milker is the best investment I ever made."—F. E. ABRAMS, Brookhaven.

"This is the fourth season that I have been using the De Laval Milker, and it hasn't given me a moment's trouble. It milks perfectly and I could not be without it."—W. H. BUSSETTE, Saranac.

"I have used my De Laval Milker nearly 5 years and would not know what to do without it; should probably sell the cows. I milk from 15 to 18 cows."—F. B. RANDALL, Mt. Sinai.

"I am very much pleased with the work of my De Laval Milker. My dairy consists of 15 purebred Holsteins and each cow's

milk is weighed each milking. The entire dairy last year averaged 11,687 lbs. each per cow, and six of them as two-year-old heifers, so you can see that I am in a good position to see exactly what my machine is doing for me."—WM. M. WALKER, Cobleskill.

"I have used the De Laval Milker for 4 years, and have absolutely no fault to find with the machine."—C. M. LIBBY, South Dayton.

"Your De Laval Milker which I purchased about four years ago has given me excellent service and good results, in regard to milk flow and uniformity in the amount of milk produced from day to day."—H. ELDRIDGE, Porterville.

"I could not get along without my De Laval Milker. If it wasn't for the milker I couldn't keep a cow, and it has always given satisfactory results."—Geo. H. THOMPSON, Gilboa.

Thousands of other De Laval Milker users are just as enthusiastic in their praise. If you are milking ten or more cows by hand you can soon pay for a De Laval in time saved, and extra milk of better quality produced. Sold on easy terms.

We Have Faith in Dairy Farmers

For nearly thirty years, dairy farmers have shown their faith in Harder Silos. Now, we are determined to show our faith in Eastern dairymen. In order that we may help them clear a profit under present conditions, we are making unusually liberal terms to any responsible dairyman.

There is no longer any need of doing without a silo or scraping along with only one when you really need two. A small down-payment will secure one, and the rest so arranged that only a little need be set aside from each milk check. The extra milk from feed now wasted will pay for your Silo.

HARDER SILOS

are equipped with the new patented Harder-Victor Front—the biggest silo improvement of recent years. You can put them up without skilled labor. Write for our free book, "Saving with Silos" and particulars of our easy-payment plan. Study the strong points of Harder construction. Learn how you can make bigger profits with a better silo.

HARDER MFG. CORP., Box -F Cobleskill, N. Y.

Farmer—An' how be Lawyer Barnes doin', Doctor?
Doctor—Poor fellow! He's lying at death's door.
Farmer—There's grit for ye—at death's door an' still lying!—JUDGE.

SILOS

Best for 23 Years—Best Now. Highest Grade of Material and Workmanship. Made from the Centuries old Genuine Yellow Douglas Fir.

The only silo on which you can get those famous

INTERNATIONAL AUTOMATIC-TAKE-UP-HOOPS
Write now for Special Winter Discounts
INTERNATIONAL SILO CO., Dept. 16, Meadville, Pa.

think— what your Silo must face!

Fall—filled to capacity, staves soaked with juice and expanding.

Winter—frost and more expansion.

Spring—staves contract.

Summer—hot sun beats down; dries the empty silo out, causing more contraction—staves drawing away from each other. Then a husky wind storm and the staves start to slip, slide and lean. The same thing over next year and the next until before long a strong gust of wind blows the weakened structure down, or it tips and collapses.

Not so with the Craine! Here's the one silo that has the *giant strength* and *great durability* to stand up year after year, against the stresses and strains put on it. Often enough big barns have been flattened by storms that *never budged* the Craine Silos next to them.

Such strength is worth money to you!

Picking Out Brood Sows

You Can't Tell When They're Too Young

THE search for "really good" By R. B. RUSHING size as indicated by the size of the bones

brood sows is not as easy as might be supposed. It is a matter that must receive our very best attention and judgment. The sows are to be the mothers of the pigs from which we expect profits and impart to them many of the desirable characteristics which we wish them to possess. If the sows do not possess these good characteristics they certainly cannot transmit them to their progeny.

The time for selecting the sows for breeders is a matter of much importance. I have heard farmers say in an offhand manner that the proper time to select the sows is when they are weaned as young gilts. With some and under some conditions it may do to choose them then but under conditions usually found at that time it is doubtful to perform so important a task.

Fat Pigs Not Always Best

At weaning time some of the pigs are very fat and look nice but it is well to bear in mind that excessive fat at that time is not beneficial. Fat is apt to cover up a multitude of faults. The fat pig that has had the advantage and secured much more milk than some of the other pigs is not the one likely to succeed best when compelled to live on ordinary feed, and yet it is the fat pig that has the preference in most cases when the selection is made at that time. Excessive fat reduces the vital energies and if the pig is weakened at weaning time it will not recover from the effects for some time, if ever.

During my experience of a number of years in breeding and selling pedigreed pigs I have found that weaning time is the most deceptive period to pick out the best brood sows. If the pigs are allowed to grow until they are six or eight months old they will have rid themselves of some of the influences of their early life and their true form and leading characteristics will then have been developed, showing them nearly as they will be in the best form which they can acquire if properly cared for and will maintain until the end of their period of usefulness.

Don't Lose Mature Sows

When one has mature sows of excellent form and desirable characteristics he should not dispose of them in order to secure young sows to take their places. It is disposing of a certainly good animal and taking many chances of not getting anything equally as good. The young sows will not farrow as many pigs at a litter as the older sows nor will they be able to give much milk to start the pigs along while young. If an exceptionally good young sow appears it may be a good plan to keep her and to test her and if she proves a valuable animal she can then be kept to replace some of the older ones that are faulty in some other way.

This part of the subject brings to consideration some very important points not to be overlooked. The first thing to look for is constitutional vigor. If the sow has a weak constitution she is not desirable and cannot be depended upon to bring strong and vigorous pigs, no matter what good qualities the boar to which she is bred may possess. The external indications are a wide face, short neck and good width between and just back of the fore legs. Those things indicate large heart and lungs which, if accompanied by a good body and broad loin, mark an animal that will be a good eater and a good assimilator of the nutrients in the food consumed. A sow possessing them and well mated will transmit them to the pigs.

A Strong Back and Legs

The sow should have bone of good

in the legs and should have rather short legs. If her legs are short and straight, the sow can stand up well, but if long and crooked they are apt to become weak and break down. Weakness of this kind is transmitted and it is an undesirable condition to have a bunch of young hogs that cannot stand up well and carry their weight.

I have heard some men say "select a large roomy sow as a breeder". That may mean a good deal but the description is not definite enough. It might mean a large, weakly coupled animal that would not prove profitable.

While I want a good length of body, I don't want a sway-backed animal that drops below the level of the back at any point. A back that is slightly arched shows strength, and if with it the sow has sprung ribs and broad loins it will hold up the sow and the sow will retain her comeliness under ordinary conditions if she is properly fed.

Know Something About the Ancestors

Ancestral influences that come from both sire and dam of the sow are desirable. A sow from a family of hogs that has been well cared for and well fed for several generations will have a good feeder's disposition and transmit the thrifty habit to the pigs. A sow that has descended from ancestry on both sides that are producers of large litters will be productive and a good mother. Sows that farrow large litters are good milkers if they are given plenty of milk-making food. Sows from families of small litters produce small litters and are not heavy milkers. These are factors that make the sows in the herd desirable and that are likely to mean the difference between an inferior herd of sows and a herd from which large profits can be obtained. That makes for the "really good" brood-sow. I find this search often to be quite a job to get just the kind I want, and in fact I am always searching.

What Causes Restless Hogs

I have two sows each about a year and a half old. They are getting corn and middlings but they do not seem to be satisfied. They have destroyed one trough already, eating it up completely. I also have given salt and ashes but it seems to do no good. They are particularly annoying as they keep it up all night. Did you ever hear of pigs doing this?—Subscriber.

THIS is not uncommon. There is something radically wrong and the pigs are trying to make themselves understood. There are two general possibilities. Either the particular ration you are feeding is not satisfactory or there may be some foreign agitation such as worms.

It seems to be the best bet to treat them for worms first, although your ration may be adjusted somewhat.

Starve the pigs for 24 hours and then give each one, for every hundred pounds of live weight, 45 minims of American wormseed and one ounce of castor oil. Repeat the dose in two weeks. When the oil has acted give the hogs free range as lack of exercise is another one of the causes that may be responsible for the present trouble with your hogs.

Relative to the adjustment of the ration it is advisable to use clover or alfalfa hay if it is at all available. In addition to your middling and corn it is also recommendable to use a little oil meal and digester tankage or fish meal. If you have milk available, although it may be skimmed add it to the ration. With these feeds, in addition to plenty of exercise and water, which should always be available, there is no reason why your pigs should not thrive.

**SPECIAL
Introductory
PRICE!**

The Drew Line dealer in your town is featuring the remarkable new Drew Stanchion at a Special Low Introductory Price. Be sure and see this new Stanchion. It represents the simplest and most satisfactory factory construction ever devised.

Baby Chicks: A Good Start

For The Man Who Knows Nothing About Culling

Mr. Hiscock touches a very vital note in his article that follows. The average farmer, we believe does not feel in his mind that he knows enough about culling to go among his hens and intelligently pick out the layers. He is at a great disadvantage. One way out of his problem is to buy baby chicks from reliable hatcheries that sell bird from tested matings and are so thoroughly accredited that there is no doubt in his mind that he is dealing with responsible people.

L. H. HISCOCK

amount to \$75. Farmer B disgusted with his old mongrel flock, has put in a strain of good birds raised from baby chicks. These birds, fifty in number, average twice as many eggs which of course, gives him \$150 for the eggs sold. Because he bought baby chicks, however, farmer B paid twenty dollars for his stock, but even in spite of this fact he has taken in just \$55 more than his neighbor.

Good Hens Pay Bigger Dividends

This brings us to another interesting phase in the history of these two men. Both of them had to feed their birds, and if they both fed the same things, as they probably did, then the farmer with the best stock made a better profit on his grain investment. In other words if you are going to keep hens and feed hens why keep any old thing? It does not cost a cent more to keep a flock of good hens that it does a flock of poor. To the writer this is the pathetic part of the farm poultry plant. Chickens! Yes, chickens on every farm but what kind of chickens? To be sure there seems to be a marked improvement in the last few years; there are those progressive farmers who see the hens as something well worth while. The point is this: Do you?

To be sure a change in your poultry plant calls for a small financial investment but did you ever think how easy it would be to let those old birds you have buy your stock? Cash in on them. In the spring months fowls bring good prices. Why not sell off enough old hens to buy your new stock with? Any old fowl will bring you from eighty cents up. Sure, I know she is laying now but think of the days when she did not lay! The sale of twenty-five birds at eighty cents will bring you twenty dollars, or a goodly number of baby chicks. After all is there any problem that offers such an easy solution? Somewhere biddy bites the dust. In the meantime by parcel post there comes one of those noisy, peeping boxes,—the hens of the future have arrived.

Rather Too Many Than Too Few

Finally, just one more word; call it caution if you like. If you need fifty pullets to fill your hen house next fall, don't buy fifty baby chicks, buy two hundred! It is an unfortunate law on the farm that male and female generally split in a fifty-fifty proportion. Therefore, figure fifty per cent of your chicks will be cockerels. Then leave a liberal allowance for death by accident, misfortune and calamity. In other words, you will find that for every pullet you want to keep you ought to buy about four chicks. With good luck you may have a margin of a few pullets to spare; with bad luck you may not be so very far short. Take a chance on having too many because if you do you will surely get rid of all the old birds.

There is an old cut and dried saying about doing things worth while and doing them up to perfection. Can you really afford to keep a bunch of old scrub hens when the baby chick business affords such an opportunity to get stock from good breeders and producers? The choice is yours. In spite of snow and zero weather, I warn you, folks, from a poultry point of view, spring is almost here. Early chicks make early laying fall pullets.—L. Harris Hiscock, Skaneateles, N. Y.

FARMERS spend hours looking over their farm equipment; they want tools to work right when they start to use them. Time is precious and a break or a clog is a serious handicap, a wasting of valuable time.

Unfortunately, the flock of hens does not necessarily get this same over-hauling. Look the prospect over for a minute. Just what have you got to breed from? That is a question that ought to be answered now if you want a better flock of hens than you had last year.

Frankly you will find yourself in one of two classes: If your hens have been culled you will have birds for breeding and your flock will show improvement from year to year. On the other hand if your birds have not been culled, if you are simply drifting along, setting any old eggs, your flock is not progressing. You are breeding poor as well as possible good qualities, you are breeding in and in, any old bird, any old results and you ought to clean house. The baby chick business offers you a chance to buy stock that has been carefully selected and mated along production lines. It offers you the chance year after year to keep hens without going into the labor and fuss of culling and mating your own birds. Briefly, baby chicks offer you this chance: less time wasted on chickens and more eggs per hen.

Figures and Facts, and Facts Talk

Perhaps this seems like idle talk but the situation offers some interesting figures. The average yearly production for the farm hen is 60 eggs the country over. The average egg production for the hen on commercial poultry plants in the United States is 120 eggs. To put these figures in other terms culling on commercial plants has alone been responsible for this progress in egg production. Where a farmer is not particular about a hen, a poultryman knows that his very existence is dependent upon good production and good producers.

But to return to our figures. Let us assume that these eggs sold at thirty cents a dozen for an average. Farmer A has a flock of hens that average five dozen eggs a year. In all, on his plan of letting the hens go their own gait and taking any bird for a breeder, with fifty hens, he gets 250 dozen eggs a year. At thirty cents a dozen the receipts

PAN-A-CE-A

your breeders at mating time

You WANT fertile eggs for hatching—eggs that will hatch into strong, livable chicks.

See to it that your flock, your hens and roosters, are in the pink of condition at the time the hatching eggs are laid.

Dr. Hess Poultry Pan-a-ce-a is a tonic—not a stimulant.

A tonic that imparts to the parent stock that spark of health and vigor that means fertile eggs for hatching.

Eggs that will hatch strong, livable chicks—not dead in the shell—not puny and weak.

Costs Little to Use Pan-a-ce-a

The price of just one egg pays for all the Pan-a-ce-a a hen will eat in six months.

There's a right-size package for every flock.

100 hens the 12-lb. pkg.

60 hens the 5-lb. pkg.

200 hens the 25-lb. pail

500 hens the 100-lb. drum

For 25 hens there is a smaller package

REMEMBER—When you buy any Dr. Hess product, our responsibility does not end until you are satisfied that your investment is a profitable one. Otherwise, return the empty container to your dealer and get your money back.

New York Farm News

Western County Notes by M. C. Burritt

DID I say at last writing that we had very little snow this winter? Well, we have enough now to make a good average winter—two feet or more on the level! Roads were impassible to cars for a few days and even teams with bobsleighs had hard going. The horses get so little road work or exercise in winter now-a-days that they are pretty soft when put into heavy going. But now after only three days, the big town and county trucks with scrapers attached have all the main roads and some of the side roads cleaned down to the ice.

Wheat prices continue to soar. Two dollars a bushel can now be had at local shipping points by farmers. Beans have also advanced, peas bringing \$5.50 a hundred. Cabbage is slow at \$16 to \$18 a ton. Apples are firm at 25 to 50 cents advance over ten days to two-weeks ago and are moving quite freely at these prices. Wheat, beans and apple prices make us feel optimistic just now. Prices of other crops are not so encouraging.

This week is the last call for taxes. Judging by the numbers there, most of us postpone payment of taxes as long as we can. Yet, somehow I never feel the critical antipathy toward paying taxes expressed by so many persons. We get a great many valuable facilities and services from our taxes which make our world a great deal more attractive and comfortable a place to live in than it would be were these tax moneys not provided. The real question which should concern us is "Are taxes wisely and efficiently utilized so that we get full value for our money?"

Most of us who complain about our taxes and demand loudly that they be reduced do very little which is effective to reduce them. A large proportion of the local direct taxes we pay are expended locally for highway construction and repair, school maintenance and local government. Instead of these costs being reduced, they are almost annually increased and few of us want our school and highway facilities cut down. The slight reduction in our tax rate in this county this year is chiefly due to the lower state direct tax effectively championed by AMERICAN AGRICULTURIST last year. We are paying about a dollar and a half an acre on an average, for general purposes and fifty to 75 cents an acre more for schools. Each year new services are being added at additional costs. The snow is now completely cleaned off all our main highways, at what must be a large cost. And now too, we have fire protection and of course, a fire tax. I paid \$12 for this protection this year.

What next? Can farm lands stand further increases in taxes? Can local taxes be reduced? Are we willing to do without some things? If so, what? In the poorer sections of the state many farmers have literally been taxed off their farms. Here high land values, well-to-do towns and wealthy cities help us. But there is a limit everywhere. The federal government is effectively reducing expenses and hence taxes. This state and most of our county and town governments are still increasing our expenditures and hence our taxes. Why not begin tax reduction at home.—M. C. Burritt.

New York County Agricultural Societies to Meet

THE Thirty-seventh annual convention of the New York State Association of County Agricultural Fair Societies will be held in the TenEyck Hotel, Albany, N. Y., Tuesday, February 17th, 1925, with morning and afternoon sessions, closing with a banquet in the evening. An attractive program has been arranged. Prominent speakers will talk on fair problems and ex-

periences. The Round Table discussions will occupy an important place on the program and questions of unusual interest on fair management will be discussed. These meetings always attract a large and enthusiastic delegation and is the means of giving the delegates an opportunity to meet and exchange ideas and get better acquainted. The principal speakers at the banquet are, Lieutenant-Governor Seymour Lowman, Secretary of State Florence E. S. Knapp and Commissioner of Farms and Markets Berne A. Pyrke. The entertainment features are to be furnished by several of the large amusement companies, contributing entertainers of a high order. Many persons having business relations with the fairs take this opportunity to meet the delegates which results in a better understanding of their interests. The Union Town Agricultural Societies meet on the same day holding a morning session and join with the County Societies in the afternoon session. W. E. Pearson of Ithaca, is president of the Association, and G. W. Harrison of Albany, is secretary.

New York County Notes

In the North Country

Jefferson County—A heavy blanket of snow covers the ground which promises to keep the meadows and pastures in good condition. Ice has been harvested in the L. Raysville pond. It measures about 13 inches thick and is clear as glass, no snow. H. L. Lawton has been cutting ice for the Sanna Company of New York and H. M. Doxtater is filling the F. X. Baumert Company ice-house. At present the waters are rising and work has been stopped. Farmers are cutting their wood. Quite a reduction has been made in the milk supply in this county owing to the T B test and also because farmers have decided on "less milk more money". Poultry is becoming more popular every year. Eggs are bringing from 55 to 85c per dozen according to market place. Butter is 50 to 58c a pound. There is not much call for hay and there is apparently a good supply of it in the farmers' hands waiting for offers. Folks are beginning to think of their spring seed needs. Reports have it that clover will be high but it will be a mistake if farmers do not sow it just the same. F. X. Baumert paid \$2.40 a hundred for 3% milk during December. For the first time in many winters auto travels are entirely out of the question on account of the deep snow.—Mrs. C. J. D.

Along the Southern Tier

Tioga County—Tioga county has had some very severe weather during the past month. The mercury registered anywhere from 10 to 24 below zero. At times it was mild enough to cause walks and roads to be slushy. The climax of the intense cold came on January 27 when the mercury went as low as 40 degrees below zero in some sections of the county. On the 29th we had the heavy snow. It was estimated that over two feet of snow fell, added to the 18 and 20 inches which were already on the ground. The snow has been a great inconvenience to farmers as with high winds there have been any number of drifts blocking the highways. The hill roads are practically impassable. Mail carriers suffered tremendously from the extreme cold and snow but yet they stuck to their jobs heroically. Some were obliged to discontinue their route for a day or so. It is impossible to work in the woods. The city of Owego was simply overwhelmed with snow.—Mrs. C. A. B.

In Western New York

Chautauqua County—We are into real winter. Snow is getting deep. At this writing, January 22, it is two feet deep in the woods and the drifts in the highways are very deep especially on the eastern slopes of hills. The mercury is anywhere between zero and 20 right along. Many farmers are leaving their farms and going into villages and cities to find work. There are 23 vacant farms in a radius of 6 miles and more will follow as the main reason seems to be that taxes are so high and help is so scarce.—P. S. S.

Steuben County—Up to January 15 we had enough snow to have good sleighing. There has been enough to protect grass roots. (During the third week or the month the southern tier got a very heavy storm). Farmers are busy cutting wood. Wells and streams are low. There is much discouragement over the potato situation, prices ranging from 35c to 75c a bushel. Great quantities are being held for better prices. It seems unlikely that this will materialize. Good apples are scarce and are selling at \$1.00 a bushel. There are plenty of small and poor stock which are hard to sell at any price. Eggs are 50c, butter 45c.—H. S.

Genesee County—The article in American Agriculturist about the areas of the sun's eclipse was of great value. Folks were interested in seeing the picture which showed where the total eclipse would be. The morning it came it was very cloudy and we could see very little of it. At 9 A. M. it was very dark here. We all hope and expect to see the next total eclipse here, which is only one hundred years away. We have had a cold and cloudy winter and we shall certainly be pleased when the good spring weather comes again. Prices on all kinds of farm crops are rising and some people predict that late potatoes will sell at \$1 a bushel and wheat at 2 a bushel.—J. C. J.

Editor's Note: Speaking of \$1 a bushel potatoes we hope so, too. However, the entire market situation on potatoes is not very encouraging. It would not be wise for a farmer to hold ALL of his potatoes for a higher price. Market conditions point to a rather steady market at present quotations. At fluctuations upward should be taken advantage of.

In the Hudson Valley

Dutchess County—With the exception of a few short cold waves throughout the winter we have enjoyed a rather pleasant winter. Snow has covered the ground nearly all of the time and now it is about a foot deep. Good ice was harvested this year. The grippe has been quite prevalent although in a mild form. The stores are paying 55c for eggs. The total eclipse which was visible here was a great attraction to everybody.—Mrs. L. H.

Barnes Peach Trees

We are perhaps the largest growers of Peach Trees in New England. Our seedlings are grown from disease-free seed and budded from healthy stock. These Trees develop magnificent root systems in our fertile soil. A third of a century's experience has taught us how to grow Peach Trees that you can depend upon. Our stock also includes Apple, Pear, Plum and Cherry Trees and a variety of Small Fruits. Our Fruit Book will interest you. Write for it today—free.

For
Cleaner floors
with Less work

Armstrong's
Linoleum Rugs

*Wear longer~genuine
cork linoleum clean
through to the
burlap back*

The cost is so little

"If I were just an old drudge
it might be different

*—but I just can't keep on giving these sunshiny
afternoons of my youth to ungrateful old floors.
Surely there must be some easier-to-clean
floor covering."*

Armstrong's Linoleum Rugs *are* easier to clean.
"2 minutes mopping and—CLEAN!" And they *stay* clean
longer because an Armstrong Rug is always solid, genuine
cork linoleum, clear through to the burlap back.

You just *can't* dislodge ground-in soil from a floor
surface that splinters and chips off into pits and jagged
hollows, without going back—hands and knees—to the
old-fashioned, back-breaking scrubbing brush. So let's
forget that once and for all and get an ARMSTRONG Rug.

ARMSTRONG CORK COMPANY
Linoleum Division
1001 Jackson St., LANCASTER, PA.

*Sitting Room and
Dining Room*

All roads lead to the dining room
and many the scuffling, soil-stained
boots along the way. Three times
a day a rush of feet, big and little,
tracking carelessly over your floors!
What more sensible, sanitary and
fresh-smelling than an Armstrong's
Linoleum Rug for this heavy
traffic room.

"2 minutes mopping and—CLEAN!"

*Bed Room and
Nursery*

Windows flung wide, day and
night, dust settles thick on upstairs
floors. How easy to keep them
sanitary and clean by stroking a
damp mop over an Armstrong's
Linoleum Rug.

"2 minutes mopping and—CLEAN!"

*Send for
this Free Booklet*

**"RUGS OF
PRACTICAL BEAUTY"**

Send for this book of colorplates
today. It tells you what you can
do right now to make your floors
attractive at low cost and how you
can *keep* them attractive with far less
work. Send for it today. It's *free*.

Double Protection

Two big features which mean weeks of extra wear for "U.S."

Rugged Reinforcements

If you cut through the wall of a "U.S." Boot, you'll find from 4 to 11 separate layers of rubber and fabric—as shown in the magnified view above.

These strong reinforcements guard against breaks.

Live, Elastic Rubber

If you cut a strip of rubber from a "U.S." Boot, you'd find it would stretch more than five times its length—and snap back into place every time, like an elastic band.

It's this live, elastic rubber that explains why "U.S." Boots and Overshoes stand up to repeated bending and wrinkling—and stay waterproof.

These two big features—live, elastic rubber, and layer on layer of reinforcements guard the life of "U.S." Boots and Overshoes. They protect against destructive bending and wrinkling—against the knocks and strains that shorten the life of ordinary boots and overshoes.

No wonder farmers everywhere are finding that "U.S." means longer wear!

You'll find every type of rubber footwear in the big "U.S." line. Ask for "U.S."

for ROOFS

Be Your Own Judge!

Get the *facts* in the case before you spend a cent for roofing. Put Beaver Vulcanite on the stand. Examine it and cross-examine it. Bring out all the evidence concerning its quality. Make this roofing *prove* its durability beyond a reasonable doubt. This is the only way you can be sure of doing justice to your money and your property.

Send for a free sample of Beaver Vulcanite Roofing. Give it these 6 Daring Tests—the “third degree” for roofing quality. Twist it; bend it. Make it prove that it is strong and tough. Throw it on the floor; kick it; scuff it. Make it demonstrate that its slate surface is firmly embedded in its asphalt. Put it on ice;

then pour hot water on it. Make it show you that temperature changes will not harm it. Soak it in water. Make it convince you that it is water-proof. Leave it on a hot radiator. Make it prove that it won't run or dry out under summer's sun. And, last, put burning embers on this sample of Beaver Vulcanite. Make it establish itself as a fire-safe roofing. Then, be your own judge.

Decide now to defend yourself against the waste and damage of a roof that will crack, peel, blister or curl on your buildings. Send the coupon now for your sample of Beaver Vulcanite Roofing. Arrive at your verdict through the *facts* of roofing quality.

The New WILLYS - KNIGHT

New Distinction - New Beauty - New Luxury - and
NO VIBRATION *at any Speed*

HERE is Distinction further distinguished — the new, improved Willys-Knight Sedan. Beauty has been added to beauty. Luxury has been added to luxury. Power has been added to power. A great car made greater!

Longer, lower, lovelier lines. The radiator is narrower and slightly higher to give the new Willys-Knight that aristocratic sleekness so marked in the best and costliest cars of Europe. A double beading at the waistline of the body makes the new Willys-Knight look longer and smarter. Heavier crown fenders and Fisk balloon tires add the final rich touch to a picture of richness.

Inside, the new Willys-Knight Sedan is all luxury and hospitality. The seats have been made wider to give all five passengers the very limit of comfort. The deep, soft cushions fairly embrace you. The upholstery and interior fixtures are in perfect harmony with high desire and good taste.

And even the Willys-Knight sleeve-valve engine itself has been improved. No fundamental changes have been made — just a number of small, but important, engineering refinements that make all the famous advantages of the Willys-Knight engine even *more* advantageous.

This is the only engine in the United States that is equipped with the new Lanchester Balancer, a unique invention that gives Willys-Knight complete freedom from the engine vibration so common in motor cars. This also is the only type of engine that *improves with use*. And the only type of engine that never needs carbon-cleaning. And the only type of engine that never needs valve-grinding!

More than ever is the Willys-Knight the kind of a car cherished by people who know the wisdom and economy of buying quality. Here is beauty, luxury and *trustworthiness* — all on the same four wheels!

WILLYS-OVERLAND SALES CO. LTD., TORONTO, CANADA

Reviewing the Latest Eastern Markets and Prices

MILK PRICES

THE Dairymen's League Cooperative Association announces the following prices that dealers will pay the League during the month of February for milk testing 3% in the basic zone of 201 to 210 miles from New York City. It is to be understood, of course, that the prices mentioned below are not received by the farmer, but go into the pool. They represent the prices dealers pay to the League.

Class 1 Fluid milk	\$3.07
Class 2A Fluid Cream	2.20
Class 2B Ice cream	2.25
Class 2C Soft cheese	2.15
Class 3A Evaporated whole milk	
Cond. whole milk	1.90
Class 3B Whole milk powder	1.85
Class 3C Hard cheese other than American	1.65

Class 4 prices will be based on butter and American cheese quotations on the New York market.

Sheffield Producers

The Sheffield Farms Producers announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$3.07
Class 2	2.20
Class 3	1.75

Class 4 prices determined by butter and cheese quotations on the New York market.

Non Pool Cooperative

The Non-Pooling Dairymen's Cooperative announces the following prices

for 3% milk in the 201 to 210-mile zone:

Class 1	\$2.80
Class 2	2.20
Class 3A	1.80
Class 3B	1.75

Interstate Producers

The New York State Milk Producers Association (Philadelphia Price Plan), announce the receiving station prices or the price to the farmer in the 201 to 210-mile zone from Philadelphia for 3% milk is \$2.19. In the 101 to 110 mile-zone, the price is \$2.29.

BUTTER MARKET UNSETTLED

In spite of the fact that butter prices are higher than they were last week, nevertheless the market situation is not well settled. It cannot be said that conditions are real firm and established. Last week we had a decidedly weaker condition to report. Prices were down to 36c for 92 score butter. This situation was relieved by the big storm that swept up-state, tying up transportation quite thoroughly. On top of this ice in the Hudson River practically put an end to river traffic for two or three days.

It is quite hard to say what is going to happen. Some operators are of the opinion that higher figures on the fancy grades of butter are on their way. During the past week we have had a 3 cent increase which looks pretty good to the selling interests. With curtailed receipts and the increase in prices, considerable stock has been moved. Much depends on the amount of butter that is held in transit due to storm congestations. Much encouragement can be found in the fact that consumptive demand is excellent. Furthermore indications are that the make at this time of the year will not increase a whole lot.

The market at the moment is just barely steady at 40½ for 92 score butter. Marks scoring 93 are worth 40¾ to 41½c. Creamery firsts (90 to 91 score) are bringing 39 to 40c, while 88 to 89 score are bringing 37½ to 38½c. Lower marks are worth from 33½ to 36½c.

CHEESE TRADING SLOW

Trading in the cheese market has eased off during the past week and although prices have not materially changed they are not as strong as they were. It is quite easy to buy average to fancy state flats for 24 to 25½c. Although the market quotations show 26c as the top, nevertheless it is very difficult to get this figure and trade at that price is very rare. In general whole milk State flats, held, that are fancy are bringing 25 to 25½c with a few sales of pet marks at 26c. Most business is being done on average good around 24 to 24½c.

EGG PRICES DOWN AGAIN

It is quite evident that the high water mark in egg prices is past history as far as this season is concerned. The egg market is experiencing quite a slump. Some of the wholesalers report fairly satisfactory clearances, others are shading prices to get stock moving. At the present time the market is very unsettled. It is hard to say what is going to happen. It is our opinion that farmers should think twice before they ship these days. If it is at all possible to get radio reports, we strongly advise it. When you get these radio reports compare the egg prices in the city closely with country prices. Do not use the highest city quotations. It is doubtful if you will get them. It may be that you will find after you have deducted transportation and commission costs that you will be just as far ahead if you sold locally. Of course, each individual producer has a different situation to contend with. A man that has nothing but chalk white eggs and knows how to grade well, will profit by selling in the city no doubt. It may be that mixed colors may be sold to greater advantage locally. We know for a fact during the past week or so some producers could have sold locally at a higher price than they could have received in New York City. Country prices were 58 to 60c, while the very fanciest eggs coming into New York were only bringing 62c.

During the past week brown eggs were selling way above nearby whites, but this condition lasted only a day or so. Prices have been held up somewhat artificially due to the ice in the Hudson River which made it practically impossible to transfer arrivals in the New Jersey terminals to the New York markets. As soon as the traffic was resumed prices slid back to the normal state. The fanciest nearby hennerly whites closely selected are worth from 59 to 60c. Lower grades from firsts to average extras are bringing from 56 to 58½c. Gathered whites are worth anywhere from 54 to 57½c. Pullets are bringing from 53 to 55c. Fancy brown eggs have dropped almost 5 to 8c a dozen during the past week. The very fanciest are worth 58c.

POULTRY MARKET OFF

The live poultry market has been having a great time of it during the past week. Many factors have been working against it. A week ago (January 28th) live poultry was much in demand, especially live fowls. By the following Saturday, the market was all cluttered up with stuff. Arrivals in the New Jersey terminals across the river from New York city had a hard time making clearances, due to the fact that the ice in the Hudson knocked shipping completely off its feet. At the same time consumption seemed to work backward with the result that these two forces met and resulted in a weak market. Prices declined considerably. However, as we go to press (February 5) a shortage again has developed and prices have taken a stronger tone. Even at this writing transportation is pretty well crippled up-state and therefore shipments have been not at all regular into the city. Fancy fowls are worth 32c with Leghorns 2 or 3 cents lower. The market is pretty good on chickens. Fancy yellow skinned smooth leg fowls bringing from 32 to 35c, while average runs are bringing from 28 to 30c. Nearby ducks are worth 33 to 35c. Long Island spring ducks are bringing 35c.

Use One-Way Coops

The quarantine established by the New York State Department of Farms and Markets is still in effect and being vigorously enforced. Express companies are refusing to accept any coops for shipment out of New York City. Many shippers have failed to realize the importance of this and as a result expensive wire coops are piled high in the streets of the West Washington market. Ultimately these may have to be destroyed and all will be included in the destruction. This is going to cost poultry shippers a lot of money so we advise the use of makeshift equipment for the time being. Perhaps these expensive coops may be salvaged if properly disinfected and certified but no provisions have been made for this as yet by the city or state. Use one-way coops.

POTATO PRICES TURN UPWARD

Potato prices have taken a decided jump during the past week. States are now quoted at \$2.50 per 150-pound sack while Maines are bringing \$2.75. Unfortunately very few farmers are in a position to take advantage of the advance. Those who are lucky enough to belong to an association that maintains storage cellars at track side or grow enough potatoes to support a track side cellar, can take advantage of the situation. Even these fortunately located men may find difficulty in loading in view of the fact that temperatures are so extremely low that potatoes would freeze while being loaded. Canton, N. Y., reports 40 degrees below zero and Malone sends in reports of 50 below. You can't load potatoes at those temperatures and prevent them from freezing. On top of that, the extremely high snows up state have made freight traffic extremely difficult. Those fellows who have to haul their potatoes from the farm to the car are absolutely up against it. Here we have a market that has suddenly taken a boost and we cannot do anything with it. Our advice to growers who are able to confirm, is to do so at the earliest possible moment because as soon as this cold spell breaks and roads open we are

going to see a husky flood of potatoes start cityward.

HAY TRENDS UPWARD

Prices are looking upward in the hay market. Following the snow storm last week that knocked trucking off its feet once more, the hay market slumped down completely. Prices eased off to \$26 on No. 1 timothy. As we go to press they have improved about \$1 and it looks as though it is going to go higher. This advance has not yet been felt in Brooklyn.

BEAN MARKET QUIET

During the past few weeks the bean market has had a trend that has generally been upward but it looks now as though the advance has stopped for the time being at least. Prices are practically the same as they were last week. Pea beans are bringing \$7.25 for the choicest marks. Common marks of red kidneys are a little bit better than they were last week, while the fanciest goods are not quite as high. White kidneys are just the same as they were last week, ranging from \$9.25 to \$9.75 which is also true of marrows running from \$9 to \$10.25.

VEAL PRICES ADVANCE

Live calves and country dressed veal prices have advanced materially during the past week. There is no question but what the severe storm that visited territory on the 29th had the effect of boosting the calf market. Choice live veals are bringing from \$17.50 to 18 per hundred. Most sales however, range anywhere from \$15 to 17.50. It will be recalled that during the past couple of weeks, calves had to be real fancy to bring \$16.

Country dressed veal is somewhat scarce. Wintery weather has curtailed shipments. While the demand is not very active receipts are so limited that dealers are cleaning up stocks very closely in spite of advanced prices. Choice country dressed veal calves are bringing from 21 to 22c while stock that is good to prime is worth from 18 to 20c. Common to fair marks are bringing from 13 to 16c. Even small carcasses are worth from 12 to 14c.

Live lambs have shared in the advance in the meat market so that prime marks are worth \$19 a hundred while fair to good stock is bringing from \$17 to 18.75. Common to medium lambs are worth from \$14 to \$16.75.

Prime ewes are worth from \$9 to 10 per cwt, while common to good stuff is bringing anywhere from \$5 to 9.

Hogs have followed suit with the rest of the live stock market and advanced to \$11 to 11.50 a hundred from light to mediums, while heavy hogs are worth anywhere from \$8 to \$9.

New Jersey Farm News

Farmers Want Trespass Law with Teeth In It

FARMERS of New Jersey are up in arms over the trespass problem. Conditions have been getting steadily worse during the past few years and it is felt that present laws are not adequate to meet the situation. As a result of the agitation for stricter enforcement of trespass law, organized farmers in New Jersey have come out flatly for legislation that will practically make every farmer a police officer on his own land. In other words if a farmer finds trespassers on his land he will have the power of arrest. Just how far this is going to be of any material benefit in relieving the situation, remains to be seen.

The farmers are on the right track. They do need trespass laws that are more severe. Land that is posted with "no trespass" signs at short intervals should be free from molestation. When a farmer finds trespassers on his land he should be in position to get justice. The thing of it is we must see that justice is carried out. Only too often do we hear of trespassers guilty of wilful destruction of property who are released for lack of evidence. Merely making a farmer a "cop" will not do it all. We have got to have cooperation all along the line.

Howard Hancock Heads Farm Federation

AT the annual meeting of the New Jersey Federation of County Boards of Agriculture, held at Trenton, N. J., January 13 and 14, Howard Hancock of Bridgeton, Cumberland, N. J., was elected President for the coming year, succeeding H. E. Taylor of Freehold, N. J., President of the organization for five years. Mr. Hancock, well known in state and national Farm Bureau circles, is Overseer of the New Jersey State Grange and Master of the Cumberland County Pomona Grange.

Mr. Taylor, whose active work as President in recent years has done much to build up the prestige of the state organization, was elected honorary member of the Federation Executive Committee.

D. J. Perrine of New Brunswick, N. J., Executive Committee Member, was elected

vice-president. Dr. Frank App of Bridgeton, N. J., and Director of Field Organization for the Federated Fruit and Vegetable Growers, National cooperative sales service, was re-elected Treasurer and Miss Claire E. Garretson of Belle Mead, N. J., was re-elected Assistant Treasurer. Trustees for 1925 were re-elected as follows: Edward E. Logan of Mt. Holly, N. J.; Dr. W. H. Whiton of Neshanic, N. J.; and Joseph Barton of Marlton, N. J. Dr. Whiton is Chairman of the State Legislative Committee and Mr. Barton Chairman of the Fruit Committee and President of the Jersey Fruit Growers' Cooperative Association.

Tractor School for New Jersey Farmers

NEW JERSEY State College of Agriculture at New Brunswick announces that from March 2 to March 7 inclusive it will conduct a short course for the benefit of farmers, on the operation and care of the farm tractor. The chief object of this course is to assist farmers who own tractors in the operation of their machines in a more profitable manner. It is a real practical course and the college authorities advise those farmers who contemplate attending to bring their overalls.

Additional Short Courses

Additional short courses are being offered by the college. During the week of February 23 to 28 there will be given short courses in dairy and stock feeding, milk testing and poultry feeding.

Those who are interested in any of these subjects should write to J. L. Helyar, director of Short Courses, New Brunswick, N. J.

* * *

Hunterdon County—Since the first of year we have had three pretty severe snow storms so that about all farmers can do is to take care of their stock. No manure is being hauled out as the snow is too deep. Some fine ice has been harvested. Butchering is about all done. Fat hogs are scarce this year. Soft corn lacked the power to fatten them well. Dairy products are low in prices and feeds are high with the result that farmers do not get much for their labor. Wheat is \$1.90, corn \$1.25, oats 60c, hay \$14 to \$15, eggs 60c a dozen. Cows have dropped off in prices. Barn sales are being held every day.—J. R. F.

Pennsylvania Has Its Biggest Farm Products Show

J. N. GLOVER

THE Ninth Annual Farm Products Show was held in Harrisburg from January 19 to 23 with the largest attendance and exhibits of any. All the farm organizations held meetings and elected officers and an effort is being made to unite some of the purchasing organizations into a large one in order to buy to a better advantage.

The State Council of Agricultural Associations is trying to secure such legislation as will help farmers in the twenty-four different organizations or associations represented. Monday evening Secretary of Agriculture Willits presided at the opening session when medals were awarded to pupils in vocational high schools for projects in 1924. Morris L. Clark told of the Giant Power Survey to electrify farm buildings. Governor Pinchot and L. J. Taber of the National Grange, both spoke at this meeting.

Warn Against European Clover Seed

Every day sessions were held to discuss better methods in production and in marketing all kinds of farm stock and products to suit each one's line of production. That farmers are awake to their work is evident from the attention given to the speakers. John R. Hutchison of Blakesburg, Va., discussed cooperative selling as it had been done by the potato and tobacco growers in his state, to their advantage. Professor J. F. Coy of Michigan Agricultural College, spoke on seed service in which he warned farmers against buying clover and alfalfa seed imported from southern Europe as it will not stand our winters. The new seed law of Pennsylvania was discussed by Dr. E. M. Gress of Harrisburg.

Tuberculosis in cattle was thoroughly

discussed by dairymen in their sessions and they would need \$2,000,000 to stamp out this disease in the state. The vocational high schools were well represented in the stock and corn judging contests.

The J. Q. A. Rutherford farm east of Harrisburg showed how an electrical equipped farm can save labor in doing things on farms.

Will Soon Need Better Quarters

The fact that the fine exhibit of hogs were in one building, the cattle in a second corn in a third and apples and potatoes in a fourth, show the need of suitable grounds and buildings for this show which is getting bigger and better each year. A large number of breeds of hogs were on exhibition of some of the best blood of different breeds. These consigned hogs were sold at auction on different days and were bought by breeders at prices ranging from \$30 to \$125. This was a good chance for farmers to buy good foundation stock worth the money. There was one exhibit of a Chester White litter of 15 pigs which produced 3461 pounds of pork in six months.

The Ayrshire was the only breed of cattle on exhibit but they were good ones.

The displays of apples were fine and so were those of potatoes, both of which showed the results of proper spraying. The machinery for spraying shows that manufacturers are ready and able to furnish the equipment needed to do the work, as well as to furnish the right materials to fight pests and diseases.

That the bee industry in the state is in a better condition is shown by the splendid display of wax and honey in different

See how it's cut—oil has been squeezed out, letting the strap clack. Like carrying a pail with wire handle.

Paint Without Oil

Remarkable Discovery That Cuts Down the Cost of Paint Seventy-Five Per Cent.

A Free Trial Package Is Mailed to Everyone Who Writes

A. L. Rice, a prominent manufacturer of Adams, N. Y., discovered a process of making a new kind of paint without the use of oil. He named it Powderpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather proof, fire proof, sanitary and durable for outside or inside painting. It is the cement principle applied to paint. It adheres to any surface, wood, stone or brick, spreads and looks like oil paint and costs about one-fourth as much. Write to A. L. Rice, Inc., Manufacturers, 134 North St., Adams, N. Y., and a trial package will be mailed to you, also color card and full information showing you how you can save a good many dollars. Write today.

shapes and the improved hives for housing bees. The displays of eggs in all classes was very large and the methods of caring for an dshipping eggs to save loss was well illustrated by crates and fillers on exhibition.

No Poultry Exhibit This Year

No chickens were shown this year, but hen fruit was shown in two different buildings. The game and forestry departments showed how their work is counting in increased game and forest trees. Two deer, two wild cats, porcupines, rabbits, squirrels, raccoons and pheasants on exhibition were new features and they attracted nearly every one, especially children. The Health and Educational booths were very interesting and instructive both of which are helping to lower the death rate in our state by proper food, care, clothing and water with the increased use of milk for children.

Boys' and Girls' Work a Feature

Work done in wood, iron and in rope by boys and clothing made by girls in vocational schools speak loudly for more schools teaching the growing youth how to work and in making articles which are of use.

This state in parts has very few sheep, yet the large exhibit of wool is evidence enough that we are producing sheep and wool in parts of the state at least. The usual amount of small grain was shown, but the large display of good corn exceeded that of last year in quantity at least and it looked as though there is some good seed corn in sections of the state which will be needed where corn did not mature.

Exhibits of machinery, feeds and fertilizers were as full and complete as ever, with a larger display of nursery stock. This show has grown to such a size and importance and it attracts so many people that it should have grounds and buildings centrally located for such a show or fair as this Keystone state can plan, something like our neighbor state, New York, has. The managers of this show deserve great credit for this successful show just closed.—J. N. Glover.

American Agriculturist Cross Word Puzzle No. 12

THE last puzzle of the series! But cheer up, cross word puzzle fans, a new one begins next week! There will not be the lapse of even one number between the series, for the answer to our question "shall we run more?" has been a unanimous yes.

This one will especially appeal to dog lovers, for small dogs, large dogs, fat dogs and lean dogs, are included on the list. They are all canines within the knowledge of the average person and it should not be difficult to discover their names.

Looking The Tools Over

A Good Time to Prepare for the Spring Rush

NOW that the hustle and bustle of the busy season with the farmer is about over somethings are apt to be overlooked or forgotten when, if attended to at the proper time might save a lot of trouble and inconvenience during the busy season.

Particularly is this so in regard to the care of machinery, for running a machine into the shed or a fence corner in the fall, without going over it thoroughly to learn what repairs are necessary before it is in condition to use again is laying up trouble for a busy season. In the busy rush of spring's work, when every moment counts and farmers are crowded with so many different jobs, a trip to town must be made for some special bolt or a casting and repairs made at that time are not only expensive but to the cost of the parts required should be added the value of the time consumed in procuring them.

It is time well spent for any farmer to go over each machine carefully as he puts it away in the fall and make a memoranda of all necessary repairs and parts needed and to see to it that these articles are on hand long before they are actually needed. This will invariably not only save much valuable time but will result in increasing the time that can be put in on the field work.

Besides adding years to the life of the machine, a man is more apt to take a little more time to do the job thoroughly and well if he is not rushed by the many tasks that confront him during spring seeding time. If any plow shares need sharpening before they are fit to use, take them to the blacksmith on the next trip to town. He is not apt to be as busy now as he will be when the spring plowing season starts and consequently might do a better job.

Neither will there be any wait for

to build a good substantial shed, even at the present cost of lumber and labor, it surely will pay good dividends in the long run, and also gives one more prestige in the community by good big odds.—C. L. Stiles, New York.

How to Make a Small Portable Trough of Concrete

F. G. BEHREND

THE making of a portable trough which will be handy for hog and sheep feeding can readily be undertaken by the beginner without fear of unsuccessful results. The success of making troughs of concrete depends largely upon taking into consideration and meeting a few specific requirements.

The first requirement is with this type of work that the concrete be watertight. To obtain watertight concrete requires the use of a 1:2:4 mixture or if the forms are small as is the case when making portable troughs a 1:2:3 mixture. The mere use of one of these mixtures is, however, not sufficient. The aggregates used must be clean and well graded and thoroughly mixed and the concrete, after being placed in the forms, must be well worked or spaded both between and next to the forms to secure a dense concrete and smooth surface.

Good Reinforcement Necessary

The second requirement is that the concrete be suitably reinforced to withstand the strains to which this type of work will be subjected. The concrete must be sufficiently strong to withstand the pressure of the liquids from within and the pressure exerted by animals leaning against the trough or stepping in it while drinking or eating, and also to withstand the pressure from moderate amounts of freezing of the liquids. These pressures are provided against by the reinforcement, and an additional precaution against freezing is provided by tapering the inside of the walls.

Place Concrete Continuously

The third requirement is that the concrete be placed continuously until the job is finished, thus doing away with any construction seams which are frequently the cause of leakage.

them next spring while he sharpens a good grist of them that were brought in early before the rush was on. Particularly is this so in the case of the manure spreader which is in such general use here on the large dairy farms throughout the north country, as I have so often noticed how they are frequently left out in the open with the beater all stuck up with particles of manure, also the box becomes soaked by the fall rains, which will soon cause rot and decay and often takes more out of the machine than the use of it does all through the working season.

Unless some old barn or outbuilding is available, I don't know of any better investment than for a man

The fourth requirement which is equally as important as the others is that the concrete be properly cured. This means that it must be protected from the sun and wind and kept moist for the period of several days so that it will not dry out too quickly, but by drying or curing slowly, it will attain the desired hardness.

Although the following discussion will be confined to the smaller type of tank, entirely, attention to the four requirements enumerated above will be equally important, if not more so, when constructing a large concrete container for liquids.

Farmers' Standard Carbide Suggests Reorganization

THE adjourned stockholders' meeting was held January 24th at Plattsburgh, N. Y., followed by a directors' meeting.

The report of Avram & Co., Engineers, on the possibility of profitably resuming work of the Carbide Company was presented. They made a very exhaustive survey of the water power and plants both at Plattsburgh and Round Brook, N. J. Their survey showed that business could be profitably resumed at the plant if \$425,000 could be raised. This would pay the entire indebtedness of the company, which is now about \$100,000, put the plant in condition and provide \$100,000 working capital. On the basis of their figures, if this was done, with good management, a profit of more than \$150,000 per year ought to be made by the reorganized company. Certain other details will be worked out by the directors, and then the reorganization plan will be presented to the stockholders.

If a sufficient number of stockholders are willing to subscribe to a bond issue of \$425,000 which would be a first lien on all of the corporations' assets, it was the judgment of directors to attempt to reorganize the company and operate the plant. This is not so large an amount to raise when you consider there is over 2,000,000 stock outstanding.

It Is Up to Stockholders

If the company should be liquidated at the present time, there is no likelihood that the plant would sell for more than enough to pay the debts of the company, but if the plants were running it would have a value of \$300,000.

This seems to be the only way in which the stockholders can expect to receive anything back from their investment. It is expected that it will be possible to report further details in a very short time. *None of the directors feel that they should urge the stockholders to make this additional investment.* They have agreed, however, to put up this plan to the stockholders and let them use their own judgment in the matter.

One director, who is quite a large stockholder and represents a number of people in Pennsylvania, thinks that the plan is reasonable and believes that many of the stockholders would be willing to subscribe to a new bond issue for the purposes of putting the company on its feet, believing that with the present management a fair return could be made from the operation of the company.

Long Island Farm Notes

D. T. HENDRICKSON

J. C. CORWIT of Water Mill succeeds E. R. Lupton of Mattituck as president of the Suffolk County Farm improvement committee of the association. The soil improvement committee of the association has gone on record as favoring the home mixing of fertilizers and states that a 5-8-4 mixture need not cost over \$30 a ton. Since many farmers use as much as 100 tons of fertilizer annually, they would effect a considerable saving by mixing their own. However, in commenting upon this report, several well-known farmers take exception to it. They state that in figuring the price of home-mixed fertilizer at \$30 per ton, no consideration was given to the shrinkage, which is quite a factor in buying raw chemicals out of the bag, loss in handling, etc. Then, too,

no allowance was made for labor in mixing and handling. Commercial fertilizer also comes in bags having value. Another matter to be considered, say these farmers, is that of finance. The buyer must pay the cash in December for materials, which he may not receive for three months. Ready-mixed fertilizers are usually purchased with a reasonable time for payment. Two matters of note brought out in the annual meeting of the association were that recent demonstrations have shown that the use of sulphur has proved very effective in controlling scab in potatoes and that the hot water treatment of seed before planting has helped to eliminate the blight in cauliflower plants.

* * *

During the past season, it was established at the Long Island Vegetable Research Station that spraying and dusting potatoes with Bordeaux did not increase the yield. Of course, by these

means it is probably possible to produce blight proof crops, but the increase in yield is so slight, if any, that it does not pay. At this writing it looks as though the 1925 potato acreage will be about the same as that of 1924. Already 75,000 bushels of seed potatoes have arrived from Prince Edward Island and these have been distributed among the growers on Eastern Long Island.

* * *

The Long Island Duck Growers' Cooperative enjoyed a very prosperous year during 1924. The increased shipments of dressed ducks during the year were about 15,000 barrels and of live ducks about 135,000 head, yet the percentage which had to be frozen was less than in previous years. The wholesale price of ducks is still high enough to insure a demand for all the ducks yet to be marketed. These results are due in great part to

skillful advertising. The report of C. H. Wilcox, chairman of the advertising committee, showed that over 62,000 lines of advertising had been carried in newspapers and that 34 out-door painted signs had been used. Some advertising was carried also in street cars, theatre programs, steward and hotel magazines, and cook books. The advertising committee distributed 17,000 recipe books, 13,000 menu stickers, 700 posters for restaurants, 2,000 window transparencies for butcher shops and secured in addition 12,700 lines of publicity. The members of the association voted unanimously and enthusiastically to continue this advertising campaign during 1925. The further recommendations of the advertising committee are worthy of note: experiment in canning duck meat and the establishment of a centrally located packing plant in order that a uniform grade and pack of Long Island ducks might be obtained.

Greatest

Roofing Offer Ever Made

SEAL-TITE Semi-Liquid Asbestos Roofing—Guaranteed for 10 Years

The most astounding offer ever made on any product. Even an average GOOD article could not be offered on such terms. Only a most exceptional product can possibly stand up to such a wide open proposition. Seal-Tite IS exceptional.

We do not want you to send us a penny. All we ask for is your simple request. We send all the Seal-Tite you can use direct to you—absolutely without any money deposit. We can afford to do this because Seal-Tite will SELL itself. It accomplishes unheard of economies.

We want you to read every word of this great offer. It's an offer which proves our absolute faith in Seal-Tite. You are given the opportunity of seeing just how Seal-Tite renews, restores and makes old worn-out roofs watertight. Or how it preserves new roofs, adding many years to their life. All this before we ask you to send us one cent. Few things could possibly be sold in this way, but Seal-Tite proves its value so conclusively that we are taking no risk. The tremendous savings accomplished by Seal-Tite have been proved by long use all over the country. Now read every word of this wonderful, liberal offer—

— Sent Without a Penny Down— 4 Months FREE Trial!

Your simple word that you would like to see this Seal-Tite Asbestos Roof covering on your own barn, house, or other building, brings it to you instantly. We neither ask, nor want you to send us a single penny. You pay no C.O.D.—no notes—no obligation of any kind. All of the Seal-Tite you need for your building comes direct to you. You put it ALL on. Not a sample patch, but all of it. You cover your whole roof. This is a Free Trial that IS a Free Trial in every sense of the word. You keep your money right in your own pocket. You pay nothing to anybody.

Some people pretend to give you a Free Trial, but they ask you to give them your money first. We are not afraid to let Seal-Tite speak for itself. We are not afraid to subject it to the acid test of beating rain

and scorching sun. We do not ask you to decide about paying for it the day or week after you put it on your roof. No! We want you to watch it for 4 long months. That will give you a real chance to see that Seal-Tite is everything we have claimed for it.

Then after four months you decide whether or not you are going to buy this flexible, one piece asbestos roof covering, which has made your old roof absolutely water-tight and which is guaranteed for 10 years to come. If you do not think that Seal-Tite is all that we have said for it, we do not ask you to send back our product. It cannot be returned. It is on your roof. It is there to stay. Instead of returning anything, you simply owe us nothing. We cancel our charge.

BABY

CHICKS

Success In Poultry Depends On You

MRS. ETHEL JOHNSTON.

"HOW many eggs will you have on marketing day?"

"That depends on the hens—ask them," replied my neighbor, as she surveyed her flock.

Do you know that she was wrong? The number of eggs you gather each evening really depends on you.

You've heard the story—buy two thousand day old chicks in the early spring, weed out the cockerels and sell them at a good profit in the fall, and have plenty of eggs all winter and forever after. The story is true, just in the proportion as to how nearly you follow the rules.

Most folks who have the nerve to acquire two thousand chicks at a time have enough knowledge to raise them to maturity. Brooders are pretty accurate these days, and where there is no overcrowding and reasonable care taken in regulating the temperature, few chicks are lost. Up to the time of the sale of the cockerels the experiment is uniformly successful with a majority of us. From this point on, results differ—far too much.

Have You Given the Hens the Right Quarters?

First, there is the housing problem. Chickens are much like humans. They thrive better with plenty of light and fresh air. Needless to say, the house should be large enough to provide room for exercise. The range part of the building should be subject to plenty of light and air. The floor should be high enough from the ground to always be dry, and tight enough to be free from draughts. The laying boxes should be off the floor, and there should be plenty of them. The roosts should be so arranged as to make cleaning of floors, etc., easy, and everything should be easily accessible.

Do You Keep the House Clean?

Perfect equipment alone will not make hens lay. How clean do you keep your equipment? In the answer to this question will be found many of the differences noted in results obtained from flocks of otherwise similar characteristics. Clean floors, clean boxes, clean roosts, clean birds mean healthful, contented hens. These are the kind that lay every day.

Do you count it a big task and a disagreeable one to keep your house clean? If you do, I'll warrant you are not doing it, or at least not as you should. It is really less a task to keep it clean than it is to clean it up after it becomes almost hopeless. Meantime you are losing a lot of good eggs, and the whole flock is in retrograde.

Do You Give Them the Right Food Care?

Next, and equally important, and, I am afraid equally neglected, is the item of clean, fresh water. Do you always have plenty of water available? Well, that is not enough. It must be clean and fresh. Every receptacle should be completely emptied and flushed out every day. Whenever a chicken wants a drink it should have fresh water. Any time it gets any other kind it fails to function properly because it doesn't feel just right. Whenever it doesn't feel just right its egg laying propensities begin to slacken, and your egg profits begin to fall off.

The feeding problem is a little too big to discuss in this dissertation, but in my humble judgment cleanliness and fresh water are just as important as the kind of foods served. Remember this, though, that while the chicken may not have much

OHIO ACCREDITED CHICKS

Produced under Supervision of Men Trained by Poultry Department, Ohio State University

R. E. FADER

When the Poultry Department of Ohio State University agreed to train and authorize men as inspectors for the Accredited Hatcheries which come up to their standard, Mr. R. E. Fader of Norwalk Chick Hatchery immediately put his flock under such supervision. He is hatching and selling nothing but Accredited chicks. Mr. Fader has been in the poultry business 22 years and has an unusual record for success in his line of work. His flocks are carefully bred and the chicks he produces are healthy and strong.

He is offering chicks from eight breeds at a fair price. The public can buy chicks from the Norwalk Chick Hatchery and feel sure that they will get honest and square treatment. Mr. Fader will send a fine illustrated catalog on request, if he is addressed at the

judgment, it is really the best judge as to what is good for it. I mean by this that you should watch your hens carefully and note the effect that your feeding is having. The condition of the fowl is your guide for feeding. When they do not lay well, there is something wrong, when they do not look well, there is something wrong, and when they do not act well, there is something wrong. And nine times out of ten it is not anything wrong with the hen. There is something wrong with you and what you are doing.

Some Valuable Questions for the Egg Shipper

WE received some information from the superintendent of the American Railway Express Company that should prove extremely interesting to nearby egg shippers. According to G. M. Dallas, loss and damage inspector for the company, who has been conducting an investigation into the condition of eggs offered at shipping points along the line of the Ontario & Western Railway in Chenango, Otsego and Delaware Counties, New York, damage was found in every one of the 13 cases offered. He attributed this to the almost universal use of second hand packing material to the absence of grading and to the lack of Attempt on the part of the egg packers to hold out thin shelled eggs. "Over and above all this, however," writes Mr. Dallas, "the outstanding feature of the investigation was that of the 134 broken eggs that were found. 102 were long eggs which stood above the top of standard honeycomb fillers."

In studying the report of Mr. Dallas, here are some of the criticisms: eggs dition with parts gone; eggs wrapped in paper; newspaper instead of flat used under fillers; lots of eggs thin at end; all found too long; fillers in very bad con-sizes and shape of eggs. All through the report we find this criticism, 20% too long, 30% too long, quite a few too long. 15% too long. In fact in the entire number of cases examined 15% of the eggs were too long. Too long eggs mean broken eggs and broken eggs mean no returns. Only one thing to do in this case, grade your eggs very carefully. Keep out all long and thin shelled eggs. Use good fillers.

Do Not Feed Chickens Viscera of Refrigerated Poultry

POULTRY keepers, especially those residing on the outskirts of villages and cities, are warned against feeding their flocks the viscera from refrigerated poultry. The viscera refers to those internal organs, such as the liver, heart, kidneys, intestines that are removed from refrigerated poultry before it is prepared for consumption. The organs in the body cavity may carry organisms responsible for the European poultry pest and if healthy fowls consume these organs they will soon become infected.

This warning has been issued to poultrymen by C. D. Norgord of the New York State Department of Farms and Markets. The danger from infection of this source is emphasized by Dr. V. A. Moore of the New York College of Veterinary Medicine.

The poultryman whose birds come in contact with city garbage are especially in danger of having their flocks becoming infected because of the amount of this material that is put into garbage by city housekeepers. Poultry may be killed for refrigeration when the birds have only recently become infected and the disease is not sufficiently developed so that it it be-

come visible. While such birds carry no danger to human, the viscera is highly infectious material for other poultry. As long as the European pests threaten our flocks, all entrails coming from birds not killed on the farm upon which they are raised, should be burned or buried deep enough so that the flock will not get them.

Pointers That May Save Disappointments

JUST because some breeder may be doing well with a different breed from yours, don't be in too much of a hurry to shift to that breed. Rather get some of his stock and carry it along with yours. If it does no better with the same handling, then the trouble is with you, and not with the breed. And lose no time in finding out what that trouble is and correcting it.

* * *

Many who would like to have some hens fail to get them because they lack a house specially constructed for the purpose, and think it is useless to try to keep them elsewhere. As a matter of fact, there is often an old building about the place which, with a little work and expense, can be made to accommodate as many birds as are desired and with satisfactory results. We are not crying down the specialty house, but it can be done without nevertheless. So it is with respect to room. While it is true that the more room the better, it is a fact that hens can be kept laying and chickens reared successfully in small, sandy yards destitute of vegetation. It requires more skill and work, but it is being done by hundreds of breeders.

* * *

Don't always be wishing for some other fellow's place, at least until after you are sure you have made the best of the conditions surrounding you. There is no place so fine but that it has its drawbacks, and none so bad but that it has its own peculiar advantages.

* * *

Feed is the foremost essential in securing growth or a good egg yield. Better results will be gotten from poor stock well fed than from good stock purely fed. But good stock, well fed, is the only paying proposition.

* * *

Do not make the mistake of trying to "father" the grain along. A laying hen should pay at least twofold for all the grain she eats. When you with hold a dime's worth of grain from her ration, you lose probably a quarter in the way of income.

* * *

Early morning or late afternoon are the best times to feed any choice morsels to the hens, otherwise many of the best layers are likely to be on the nests and lose their share of the luxury.

* * *

We see many who have hard luck with the machines shifting to hens as hatchers. It usually proves that they shift back again after a few seasons, for there are the same possibilities of hard luck hatching with hens as with machines. Either method involves plenty of care and work and a big element of uncertainty, but where large number of chicks are desired the artificial is the only practical method.

* * *

The same number of fowls should not be fed the same amount of ration daily. Their appetite varies like a person's. When they act rather indifferent to the scratch feed, stop throwing it out and withhold until they pick it up keenly.—J. L. W., Maine.

Making a Concrete Trough

(Continued from Page 164)

The small portable concrete trough is usually cast in an inverted position and requires but a relatively simple form. If the trough can be cast upon a good substantial floor, that is sufficient, but if such a floor is not available, a tight platform such as is shown in Fig. 1, must be constructed. The core, around which the concrete is cast, may be made of clay or wood. If made of wood, a variety of shapes are available, one made of a log cut and hewed is shown in Fig. 2, while one made of planks is shown in Fig. 1.

When the core is made of boards, the sides and ends may be made of 1-inch material and the bottom of 2-inch material rounded at the corners as shown in Fig. 1. Cleats are nailed on the floor or platform over which the core form is placed and by means of which it is held in its proper position. If a log core is used, it may be spiked to the floor or platform.

The side forms are made of 2-inch plank and should be enough longer than the finished trough to allow for the two end boards and cleats. Each end board should be cut to a length equal to the width of the tank. The form is assembled around the core and is not nailed together but is held in position by the top braces and the cleats along the side forms.

Spade the Concrete Well

Since at the top, the side walls are only two inches thick, broken stone or gravel larger than $\frac{3}{4}$ of an inch should not be used. For reinforcement, use $\frac{1}{4}$ inch round or square steel rods. If possible, use rods long enough so that they may be bent to go the entire distance around the core about 1 inch from the side walls and have the ends overlap at the middle of one side about 12 inches. If it is necessary to use two rods, they should be placed so that the ends overlap near the middle at each side of the trough and not at the ends or corners. After mixing the concrete to a quaky consistency, place a layer evenly all around in the form up to the position of the first reinforcing rod, Fig. 1, spade it well next to the form and then place the rod. Place additional concrete until the form is filled to within about 1 inch of the top. Spade it well and place three rods, spacing them as shown in Fig. 1.

To Give the Job a Neat Finish

A very neat appearing surface may be given to the trough if after one day, or preferably two, the forms are removed and the concrete is moistened with a 1:1 cement paste. This cement paste should be rubbed in with a wood float or a carborundum stone. If there are any small holes, they may be at this time patched with a 1:2 cement mixture. To close all pores and to insure a watertight job, the inside surfaces of the trough may be given a wash of cement and water mixed to the consistency of cream and applied with a brush. The importance of protecting the finished work from the wind and sun and keeping it moist while it is curing has been previously mentioned.

Watch The Oil Feed

MANY an engine or tractor is worn out long before its time, because of the lack of oil. In an automobile engine, crankcase the oil should be replaced (the old oil taken out and new put in) at least every 1000 miles.

The tractor engine should have fresh oil after every six days of work. It pays to keep a record of the time run.

The stationary engine usually has a sight-feed oil cup. Oil passes through the cylinder to the crankcase. Many persons feed too much oil. Four to six drops per minute is enough for an engine with a 5-inch cylinder at 500 R.P.M. For higher speeds more oil should be given.

McCORMICK-DEERING TILLAGE TOOLS

Heavy Yields Follow Good Tillage

and Here Are Three Profit-Making Implements

The McCormick-Deering Disk Harrow is a simple and efficient implement, built and trussed like a steel bridge, to serve many years. You will like the details and conveniences—the dust-proof bearings and the bearing oil cups set above the frame, the built-in angle-steel weight boxes, the oscillating disk scrapers, the forecarriage, etc. Made in sizes for everybody—4 to 10 feet. All sizes can be equipped with tandem attachment. Double diskings more than pays for itself.

The McCormick-Deering Leverless Disk Harrow is a genuine tractor disk, not a made-over horse harrow. It is built for heaviest duty. It is controlled entirely from the driver's seat, without levers, yet it is very simple. Merely backing the tractor automatically sets the angle of both front and rear gangs. When the tractor starts forward the gangs hold that angle until released by a pull on the rope. In 5 to 10-foot sizes to fit your power.

The Dunham Culti-Packer shown above with the leverless disk harrow has no equal as a seed-bed finisher. It pulverizes the soil, fills out air spaces, and saves moisture content. Following the drill, it helps the little plants to get a quick start, firmly set in finely mulched soil. Use it to prevent winter-killing of wheat; to rejuvenate meadows, etc. It is far ahead of a roller for small grains. Made in eight sizes, for horse or tractor use.

McCormick-Deering Tillage Tools combine these essentials—good work, long life and convenience. They are of practical design, their construction being based on ninety-three years of farm and factory experience. They are priced on the basis of economical quantity production, and as an investment they offer you attractive returns. To fill all your Tillage Tool needs see the McCormick-Deering dealer. It Pays!

The Trouble Maker—By E. R. Eastman

"GOOD morning," Jim said.

"Good morning."

"Haven't seen anything of a stray two-year old Holstein heifer, have you?"

"No."

"She didn't come up with the rest of the cows this morning, and I suspect she's hiding a calf somewhere in these parts."

"Didn't see her," replied Dorothy.

She got to her feet, brushed the leaves from her clothes, and started to leave.

"Just a minute, Dorothy. What's the hurry? Sit down a minute."

She looked at him, hesitated, and said:

"You've shown so much desire for my society lately—"

"I guess," interrupted Jim. "I've shown just as much liking for your company as you have for mine. But it's too nice a morning to quarrel, and I'm not going to do it, even if it is the fashion these days. What are you doing down here so early?"

Dorothy looked at the grave face now lighted with a smile, and noticed with a little pang that Jim seemed older.

"Just out for a walk," she answered.

There was an awkward little silence.

"You remember, Dorothy, when we used to come here to play?"

"Did we?" said the girl indifferently.

"I'd forgotten."

"Yes, this used to be one of our favorite spots—Don't you remember there was a little sort of a cave that we called our cupboard? I wonder if it's still there."

Dorothy made no reply, and Jim came over and put his hand back of the root.

"Yes, sir it's there, just the same," he said excitedly. "You must remember, Dorothy! Don't you remember that day—we had—we had a little doll—and—"

"You seem to be good at remembering this morning," said the girl coldly, "but unfortunately, all I need to remember is what happened yesterday."

The smile and the color faded out of the boy's face.

"Dorothy Ball, you don't think I was in that gang yesterday, do you?"

"Well, were you, or weren't you?"

"I won't answer that."

Standing tensely looking at each other, they were both startled.

"Dorothy, where are you?" came a man's voice. "Are you here?"

After a moment, "Yes, here I am. Who is it?"

"It's Bradley, where are you?"

"Over here. Over under the big apple tree across the brook."

In a moment he saw them. Jim was leaning carelessly against the tree; Dorothy was facing Bradley as he came over the bank.

"Good morning," said Jim. "Everybody to the rendezvous."

Then to Dorothy: "Well, good-bye, I must be moseying along. Lost a heifer in here somewhere," he explained to Bradley. "Think she's hiding a calf. She was expecting one."

Then he went away through the trees, carrying head a little to one side in a characteristic manner, carelessly slapping his leg with a little switch he carried in his hand.

"I asked for you at the house," said Bradley, turning to Dorothy, "and your mother said she saw you coming down this way."

Then he noticed the girl's white face.

"What's the matter, Dorothy? Anything happened? You look sick."

"Feel about as I look," said the girl, trying hard to smile, and sat down again. Bradley found a place by her side.

"What's the matter, little girl? Tell me what the trouble is. I don't like to see those smiling lips looking so downcast."

He reached over and took her hand.

"Oh, Harry," implored the girl. "What do you suppose they'll do to father? In spite of everything that Mother and I could say this morning, he got the sheriff and they have gone with the milk. Since this

milk business has started, everything and everybody are so upset. I'm afraid somebody will get hurt."

"I wish Mr. Ball would be a little more reasonable," said the county agent. "But don't you worry about him or anybody else getting hurt if he's got that little old advocate of peace, Dave Messenger, along. Believe me, nobody will ever do any monkeying with that chap. So if that's all you're worrying about, you can smile again."

"Think they will send—Jim Taylor to jail—when he's tried?"

"No, I don't believe he's guilty."

"But—how about it if there are those who will swear that they saw him?"

"Why I—I don't know," hesitated Bradley.

"Well—there will be," said Dorothy positively shaking her head, "and the judge will be against him, too."

"Not openly, he won't," said Bradley with emphasis. "That judge isn't going to

What Has Happened in the Story So Far

THANKS to the persistence of Lawyer Winslow, backed up by a crowd of orderly but determined farmers, Jim Taylor has been released from the county jail of Speedtown, where he was locked up on a charge of inciting violence. The general rejoicing over his liberation is not shared by old John Ball, his neighbor, whose milk was dumped by strikers and who accused Jim of leading them. When Dorothy Ball pleads with her father not to oppose the united countryside, he accuses her of defending "that Taylor hoodlum". Sick at heart, she runs away from the house to a sheltered little nook where in former years she and Jim Taylor had played "ma and pa" to a weather-beaten old doll she still finds in the tree hollow. Suddenly she looks up to see Jim Taylor standing beside her.

be against anybody very strong. Not when Winslow's around anyway."

Then he told her what part the judge had played in the events of the night before.

"Just wait," he concluded, "until these farmers get a chance at old Rising at the November election. What they won't do to him won't be worth doing!"

The girl could not be dragged away from her subject.

"But, Harry, if witnesses swear that they saw Jim dump our milk and the judge is against him, they might send him to jail."

"They might," agreed the county agent.

"Would it be for a long sentence?"

"'Fraid it would. Serious offense."

"Oh, Harry, why did Jim and all the rest of you ever get mixed up in this awful milk fight? Before it started we were all happy. The whole country was quiet and peaceful, and now look at things."

"Yes," said Bradley, grinning, "you and Dave Messenger are kindred spirits. You're both very strong for peace. Dave says he's going back to the wild and wooly west to get a little."

Then, more seriously: "Don't know but that you're right, Dorothy. Getting sick of this country myself. When all's said and done, it's no place for an ambitious person to waste himself."

Dorothy looked up in surprise.

"I think this is a good country to work in," she said. "I wouldn't say that you were exactly wasting yourself here. I'll bet the folks are as good as they are anywhere!"

Harry made no reply for a moment, but reached over into Dorothy's lap and captured the girl's hand again. When she let him keep it, he placed his other arm around her and pulled her close to him. "Maybe the folks are all right," he said, "as far as that goes, but I am going to be a big man some day and it can't be done in a place like this. Besides, anyway, I need more money to do something special I have in mind."

"What's that?"

"Marry you," he answered promptly, pulling the girl closer to him, and pressing her head back to kiss her.

For a moment Dorothy made no resist-

ance. It was comforting to know that someone cared for her, and just then she was greatly in need of comfort. Besides, why not give up to Harry and have things settled? Yes, she would like to tell him that she would marry him; but some way there was something within her that she just could not, at least, not yet.

Nearer and nearer came his face, strong arms were holding her tighter. They were not unpleasant, why resist? Maybe this was the way out. Then she began to struggle a little.

"Don't, Harry," she said. But Harry paid no attention; only held her closer. She could feel his breath warm on her face. It frightened her.

As she tried to free herself, and couldn't, she said again:

"Harry, stop! Stop, I tell you!"

Bradley relaxed his hold slightly. The girl raised a hand and pushed him away, and got to her feet. "What's the matter, darling? Are you afraid of me? Aren't

tions continued to pour into the League headquarters.

For Jim Taylor, it had been a hard, busy time. Not being able to afford to pay for farm help, he did what was absolutely necessary on his farm every forenoon, but every afternoon and evening he spent either at the telephone in the farm bureau office at Speedtown, or traveling the farm country to get reports and to carry encouragements to the fighting dairymen. Many times during the past days he had wondered if it were all worth while. Certainly, it was a disheartening task.

John Ball, a life-long friend and neighbor, was now his bitter enemy. And Dorothy—lines of fatigue, worry and sorrow stood out on Jim's face as he thought of her.

And then there was the milk strike itself. Could the farmers stand together long enough to win success? For a generation, milk had been sold in fluid form, so long that the dairymen had forgotten how to make butter at home and had few facilities for doing it. They had succeeded somehow in getting along for the first few days, but now the tremendous task was beginning to tell upon the dairymen and their wives, both physically and mentally.

Besides, how long could they stand the financial loss, for the poorly made butter would bring little, even compared with the low price which the dealers had paid for the milk before the strike. There were beginning to be signs of wavering. Here and there came a break in the line; only today Jim had received a telegram from R. D. Cooper, President of the League, that there was a leak in one end of the county, that the dairymen at two or three stations were delivering their milk, and that Jim must get over there and somehow get them back in line.

Yes, the men were loyal, but there was a limit to which loyalty could go. There was the constant propaganda from the dealers which added to their discouragement. Even if he did go over to the section where the break had occurred, what could he tell them that he had not already said? How could he be sure that all the effort and all the loss were not in vain? And what would be his responsibility for this loss and sacrifice if the whole thing should be a failure and the dealers should win?

It was late in the evening. Jim was in the farm bureau office and had just finished making a report to the League headquarters. Bradley had gone home to bed an hour before, leaving Jim to lock the office when he was through.

As Jim sat rather bitterly reviewing the situation, the telephone rang.

"Is this Jim Taylor?"

"It is. Who is this speaking?"

"I can't tell you that," came a voice that Jim did not recognize. "But I want to give you some very important information. I tried to get you at your farm, and they told me there to try you at the farm bureau office."

"What's the matter?" asked Jim.

"There's trouble brewing tonight up at Johnny Ball's."

"What trouble?" asked the boy, instantly alert.

"Well, I don't want you to ask me too many questions. 'Nough said, when I tell you that I've been—with the gang that's been pullin' some rough stuff in this strike, and I've come to agree with you that it does us farmers more harm than good."

"Never mind," insisted Jim. "What's the matter up to Ball's? Stick to the point."

"You know that old Ball has been carryin' his milk every day with the help of the sheriff. Some of the boys are sick of it, and they've gone up there to dump his milk, or put kerosene in it."

"When will they go?"

"They're on their way now."

(Continued on Opposite Page)

CHAPER XXI

THE first five days of the milk war were over. Both the dealers and the farmers had settled down for a test of strength. Each day so far, the dairymen's ranks had steadily grown stronger, and each day the membership applica-

When Trouble Comes

A Sunday Afternoon Visit With The A. A. Philosophy Man

by REV. J. W. HOLLAND

A CATHEDRAL in Milan has three doors. Over each door in a sentence that ought to be memorized by everyone who tries to live a real life.

Over the left portal are the words, "All that pleases is but for a moment".

Pleasures of the body come from pleasing nerve sensations. If these sensations were not changing all the time life would be stale. You can tickle a boil with a feather and it is pleasant. Tickle it too long and it becomes painful.

We sigh when pleasures pass. Well, if they did not pass we would sigh more.

A moment of victory is pleasant; but a life of constant victory would drive us to anything for a change. I used to think that mince pie was the one delicacy of the palate. Then, I ate three pieces and changed my mind. I wanted some-

Rev. J. W. Holland

thing else next time.

Over the right doorway stand these words, "All that Troubles is but for a moment".

Ills pass away, like the morning storm clouds. Many people are paralyzed when troubles come, but they also pass away. The poorest thing to do with one's hands is to wring them.

God never forgets us, and the elements of peaceful living are never far away from us.

Dear old Mrs. Wiggs said, "It ain't no use putting up your umbrella till it rains. There ain't no use dyin' 'fore your time comes. Looks like everything in the world comes right if we wait long enough".

Whoever does his best will either miss troubles, or he will meet them resolutely, and see them pass away.

"Before God's footstool to confess, A poor soul knelt, and bowed his head; 'I failed', he cried. The Master said, 'Thou didst thy best—that is success'."

The Trouble Maker

Continued From Opposite Page

"All right, good-bye."

Jim hung up, and looked at his watch. It was ten-thirty. He could never get up there in time to stop trouble. Too bad the fools could not let John Ball alone.

Taylor stood thinking for a moment as to the quickest way to get up to the Ball place. Everybody was asleep, only a few of his friends had automobiles, and by the time he could get them out of bed he could be up there with his horse and wagon. Grabbing his hat and coat, he made for the church shed where his horse was tied.

"Old girl," he said to her, "you've got to run, and I figure you can run better without a wagon."

He quickly unhitched her from the wagon, pulling all of her harness off except the bridle, and jumped on her back. At his sharp slap, she went out of the old church yard at a dead run. But no farm horse could stand it to run any long distance without being winded, and by the time they had gone over the little hill beyond Speedtown and down into the hollow near the old Harris deserted barn, Jim was obliged to pull the horse to a walk.

He had just crossed the little bridge in the hollow where Johnny's milk had been dumped when suddenly there came a flash of light, a roar, and a stinging sensation in Jim's upper arm. He reeled and with one hand grabbed the horse's mane.

A second only he hesitated while he realized what had happened. Someone had shot at him! Without further thought, he slid from his horse, charged up the bank and over the stone wall. Pausing to catch his breath, he heard someone running and started in pursuit stopping every moment to listen for the other's footsteps. Each time that he stopped, Jim knew that he was gaining on the other, and then coming through a little piece of brush, he saw the dark shape of a man just a few feet ahead of him pausing to crawl under a wire fence.

With a last spurt, Jim reached the fence, rushed down a little bank into a side road, and grabbed the stranger as he was frantically trying to climb into an automobile. The struggle was soon over. Jim was out of breath from the run, but the other fellow was so absolutely all in that he could make little resistance. In a moment Jim had him on his back, sitting on him and holding both hands pinned to the ground.

It was several moments before either of

the spent men could speak and then Jim, bringing his face closer to the other in an effort to see, recognized his man.

"Aha, Shepherd," he said, "so it's you playing with the fire-works, was it?"

The other man made no reply.

"Looks to me," Jim said grimly, "as if I was going to have some company in this indictment business."

That brought the milk man to use his tongue.

"Let me up, Taylor," he said. Jim rolled off of him and Shepherd sat up on the edge of the road.

"Well," he said. "I'm ruined now."

"Certainly looks as if you were pretty well started," agreed Jim. "I knew you didn't like me, but it seems right poor business for you to be running around that way with a gun."

"It was," agreed the superintendent.

"Well, what did you do it for then? Fool business like this isn't going to get you anywhere."

"No, you're right. But I've simply got into a situation where I can't think straight. To tell you the truth, Taylor, I'm just about crazy."

"Must be," commented Jim. "Can't see how shooting me up is going to help you much, even if you do not like me."

"This milk fight's got me going," said the superintendent, "and all I can think of is that you seem to be making most of the trouble—No use trying to pull any

Above the center rood of the cathedral is this line: "ONLY THAT IS IMPORTANT WHICH IS ETERNAL"

It is of value to raise good live-stock, and crops, it is IMPORTANT that our children be trained in character that is eternal. It is a good thing to learn and practice the graces of life, it is IMPORTANT that we live above the disgraces. We are glad that our sons and daughters are winsome, it is IMPORTANT that they become wise.

The business of the oak tree is to mature hard fibers. Spring breezes and gentle rains, and birds nesting in its branches, may be pleasant for the tree, but it always remembers its main business. Winter storms and summer hurricanes are also a part of the lot of the oak, but it laughs at the storms, and knows that they will leave it with tougher fibers.

I love the line in Hebrews which says of Christ, "Though He were a Son, yet learned He obedience through the things which He suffered, and being made perfect through suffering, He is able to help those that are tried."

"ONLY THAT IS IMPORTANT WHICH IS ETERNAL."

hard luck story with you, and I can't blame you if you put me where I guess I belong, but it seems as if I'm having it kind of tough lately—Can't sleep; can't eat; been afraid that this strike would mean that they would shut up this station and I would be out of a job."

"What of it?" asked Jim brusquely. "Losing a job hardly justifies getting yourself hanged for murder."

"No use trying to explain," said the other. "But just at present losing that job is a life and death business with me—I don't give this as an excuse for the fool thing I tried to do tonight, but I've got a little girl who's dying with consumption. —The doctors tell me that if I can get money enough to keep her up in the mountains, she's got a chance."

"Well, you get a pretty good salary, don't you?" asked Jim—"Looks good to a milk producer, anyway."

"Probably it does, but I'm liable to lose it through this strike business. Anyway, the salary doesn't seem big to me for I've got four children besides the sick baby. What you farmers don't realize is that these salaries the town fellers get aren't so big as they look. Rent takes a big slice, and then we have to pay big prices for everything that we get, even have to pay for the very water that we drink."

"Might be something in that," agreed Jim. "Never thought of it just that way."

But, after all, what's that got to do with your trying to murder me?" he said sternly.

"Nothing. No excuse at all," said Shepherd, dejectedly, holding his head in his hands. "Just about crazy—seeing the little kid so sick and I just didn't stop to use no reason at all. Thought you were stirring up trouble here and that you were going to keep on till farmers wouldn't have no place to go with their milk. Then I'd be out of a job, with no money for the babies."

"By the way," said Jim, apparently changing the subject. "How come you were hiding behind that fence just as I was coming along here in the middle of the night anyway?"

"I've known all about you and what you've been doin' ever since the milk strike started," said the superintendent.

"How's that? What do you mean?"

"You might just as well know the whole dirty deal. The telephone operator is my cousin and she has helped me to listen in on every telephone conversation, and when you got that warning tonight, I heard it and beat you here with my car. I have no excuse except that I was crazy. I had no idea of what I was really going to do—but I did my worst. Now what are you going to do about it?"

Jim ignored the question.

"So that telephone call was not a put-up job?" he asked.

"No. I don't know who phoned you tonight. I only know that I heard it and got the crazy idea that if I could get you maybe it would break this strike."

"Then," said Jim to himself, "there really is trouble at Ball's. 'Get into that car,' he ordered the other man sharply. 'You and your fire-works have probably prevented me from saving a lot more trouble tonight. I left my horse down there on the road to chase you. She's probably gone home. Open up the throttle of that car and take me to Ball's as fast as you can.'"

Without another word, the men got into Shepherd's car and they covered the remaining distance to the Ball farm at a speed which made the car seem to eat the night as it rushed into it. When they arrived, Shepherd brought the automobile to a stop, and Jim jumped out.

"I don't want you to be seen here," he said. "Take your machine home and go to bed."

"Just—a m-minute," said the other. "What—tell me—what you're goin' to do—about tonight, Taylor. I—I—I'd rather know the worst—than have it hanging over me."

Jim stopped, hesitated a moment and then put his hand on the other man's shoulder, which was hunched down over the steering wheel.

"Shepherd," Jim said. "I think you've had your lesson. I'm going to forget about tonight, and advise you to do the same. And—I'm sorry about the little girl."

For a moment the superintendent struggled for words, but while he hesitated, Jim was gone.

He was running toward the Ball milk house. As he ran, he saw several dark figures come out of the milk house and scattered into different directions. Jim dashed up to the milk house door, hoping to catch at least someone still inside, but he could see no one in the dark interior. For a moment he paused, trying to decide his next move. While he stood there, it was decided for him.

"Stand right where ye be!"

Jim whirled at the command to see not ten feet away a disheveled old man, barefooted and bareheaded, in overalls and cotton shirt, with beard pointing straight forward, holding a very businesslike looking shot gun. At Ball's side stood another man holding a lantern high in his hand.

"By heckolorum!" squealed the old man. "Got ye dead to rights that time! Mebbe you'll try to crawl out of this. Hold that lantern, Bill," he said to the hired man, "while we see what this whelp was tryin' to do."

For Washington's Birthday

A Menu For A Patriotic Luncheon

NO RED letter day on the calendar affords such rich material for the hostess to choose from in her entertaining, as does the 22nd of February and it would be a difficult matter to find the person, old or young, married or single, who does not enjoy the mythical cherry and hatchet, eat with a keener relish the nuts and bonbons from George's hats or exclaim over the tri-colored surprises, that are set before him. Blue is the hardest color to work into this celebration and is best represented in blue dinnerware, which is very easy to borrow or rent if you do not already possess some of your own.

For a centerpiece, red flowers may be used, or a tiny miniature cherry tree, or fill a small compote with bright red apples and into each insert a tiny flag, cover the edge of the compote with any green foilage and place a bunch of artificial cherries at intervals.

The following menu may be served:

Consomme a L'Independence
Southern Smothered Chicken
Sweet Potato Croquettes
Mashed Potato Puff
Martha Washington Rolls,
Pickled Beets,
George Washington Pie
Flag Cakes
Patriotic Salad.
Red, White and Blue Ice-Cream
Cherry Ice Coffee

Consomme A L'Independence.—Make any good clear soup. Make a dough of flour and water thick enough to roll out very thin. Sprinkle with salt, cut with a tiny star cutter and bake. Have one star in each cup of bouillon and pass in place of wafers.

Southern Smothered Chicken.—Clean and truss a tender chicken as for roasting. In a broad pan that another pan can be inverted over to cover closely, place two tablespoonfuls of butter, a sprig of thyme, a stalk of celery, or sliced onion and carrot. Set the pan on top of the stove and let the vegetables brown in the butter, for about ten minutes. Add to this a pint of brown stock very well seasoned with salt, white pepper and paprika. Lay in the chicken, cover the pan, put it in the oven and keep it at a steady heat for three quarters of an hour. When the chicken has been cooking half an hour, add to the gravy, two tablespoonfuls of cherry juice, a tablespoonful of catsup and cover again for a few minutes. Remove cover and let brown slightly. Send to table very hot.

Sweet Potato Croquettes.—Boil, mash and season sweet potatoes, with salt pepper and butter. Add the white of one or two eggs, according to the quantity of potato used, and cream the mixture. Make into pats, dip each into the beaten yolks of the eggs and roll them in sifted bread or cracker crumbs and fry until brown in a wire basket.

Mashed Potato Puff.—To one pint of hot boiled potatoes, add one teaspoonful of butter, a pinch of salt and white pepper and hot cream to moisten. Mash and beat until light and creamy, then rub through a colander into a hot dish. Do not touch afterwards as the flakes will fall, and serve as hot as possible. This makes a very pretty and dainty dish.

Martha Washington Rolls.—Scald a pint of fresh milk and let it cool somewhat, add a tablespoonful of butter, a scant tablespoon each of salt and sugar stir until well mixed. Sift two quarts of flour into a mixing bowl, make a well in the center, turn in the milk preparation, then one-half cupful of yeast (one half cake compressed yeast dissolved in half a cupful of tepid water may be substituted). Beat all together well for five

minutes. Cover bowl and put in a warm place over night. Next morning knead well on the board, sifting in flour enough to make a soft dough. Put back in the bowl, cover and keep warm until risen to double its bulk. Work down, make into very small rolls, put in a greased pan, set in a very warm place for fifteen minutes and bake in a hot oven.

Patriotic Salad.—Serve some chopped celery on a blue plate and in the center a slice of pineapple stained red with any red fruit juice. Completely cover with a white mayonnaise dressing.

George Washington Pie.—Cake Part: One egg, three quarters of a cupful of granulated sugar, one tablespoonful of butter, one and one fourths cupfuls of flour, three quarters of a cupful of milk, one teaspoonful of cream of tartar, half

Heaven On Earth

(A poetic expression of a thought that at some time or other has come to all those who understand the beauty of the country.)

WHERE is Heaven? Is it not
Just a friendly garden plot,
Walled with stone and roofed with
sun,
Where the days pass one by one,
Not too fast and not too slow,
Looking backwards as they go
At the beauties left behind
To transport the pensive mind?

Does not Heaven begin that day
When the eager heart can say,
"Surely God is in this place,
I have seen him face to face
In the loveliness of flowers,
In the service of the showers,
And His voice has talked to me
In the sunlit apple tree."

— Bliss Carman.

a teaspoonful of soda. Bake in Washington pie tins. Filling: One cupful of milk, sweetened to taste. One egg well beaten, then added to milk, heat to boiling point, add two teaspoonfuls of cornstarch dissolved in a little water, after it has boiled up, remove from fire. When ready to fill cake, spread, then slice two whole bananas, lay on cream, put a little more cream over them, then lay the cake on top. Dust with powdered sugar or a white icing may be used.

Flag Cakes.—One cupful of sugar, one tablespoonful of butter, one egg, one cupful of milk, two and a half cupfuls of flour, two tablespoonfuls of baking powder. Bake in small cup tins. Ice with a white frosting and place small candy flags in center.

Red, White and Blue Ice-Cream.—Heat one quart of milk, add one half cupful of sugar, one beaten egg, let cool. Add one pint of whipped cream, then add one cupful of preserved blue plums and one cupful of preserved or candied red cherries. Freeze several hours.

Cherry Ice.—Place a small teaspoonful of cherries in the ice before it goes to the table.—H. A. Lyman.

Do Not Force Plants

IF A plant has been growing thriftily for some time and then begins to go back, it probably needs a rest, and no amount of forcing will do any permanent good. It will, says *Nature Magazine*, do a definite harm. During the resting period a plant is better if left entirely alone in a dry, cool cellar. It will of its own accord, and without any attention of any kind, begin to put out new green shoots. When these new shoots show themselves the plant should be given a thorough watering, a repotting if necessary, and brought up into its place in the sun. After is it growing well it may be given fertilizer.

Relief for Lame Backs

Get Acquainted With The Birds

They Appreciate Food in Winter—Home Care of the Sick

ALL summer long birds flash their dainty bodies across our path and even during the winter many of them could be persuaded to stay over, had they enough food. Last winter a golden winged woodpecker boarded with me; long before he had his plans made for going south I cultivated his acquaintance; tempting him with a hunk of suet tacked onto a tree in which I often seen him. And then when migrating time came he had simply nothing to migrate for, so he stayed and was on the job eating up bugs good and early in the spring.

When putting out suet, cover it with

importance of bringing cheer and charm to the sick room. Here are a few simple suggestions which will tend to make simpler and easier home nursing.

Where no bedside table is available, a sewing table may be used. Open one pair of legs and stand table beside the bed. Leaving the other legs turned

board inside a pillow case, and place this rest against the head of the bed with the pillow next to the patient's back. Use other pillows for "fillers in." This is much more comfortable than a bunch of pillows and will stay in position better.

Paper bags are indispensable in the sick room, especially in cases of contagious or infectious diseases. Turn down the tops a short distance and flatten the bottoms, pin at the side of the bed, and they make ideal containers for all sorts of waste materials. The bags and their contents must then be burned.

Use Things That Can Be Washed

A tray, white enameled, is splendid for holding medicines. The medicines can be moved about easily, the tray easily cleaned, and a stand cover saved from stains. Lacking a tray, a thin, rather flat piece of wood may be used. This will need one or two coats of flat white before the enamel is applied.

Gauze or cheese cloth used in place of handkerchiefs makes a big difference in the laundry. These patches may be burned and danger from germs minimized.

As for children, they will enjoy nothing better than to have bright pictures, postcards, etc., in front of them. These may be hung on a string fastened along the foot of the bed. New ones may be added and positions changed to keep it interesting.

And by the way, no sick room can ever be called complete, of course, without some flowers. Plants are probably the most interesting, because their growth can be watched. A rose tinted eyelamen is ideal, and anything bright helps enormously to bring back health. And after all what is much more important or necessary than good health?—Mrs. E. B. Terbush.

All-Year-Round Wisdom

A small portion of milk rubbed on a varnished floor makes a splendid polish.

* * *

If the two ends of clothes hangers are bound with some sort of material, it will prevent dresses from slipping off while in the closet.

* * *

It is not a difficult task to clean gold and silver jewelry. A teaspoonful of ammonia added to a cup of water will do the work. The jewelry is cleaned with this solution and then polished with a dry cloth or a piece of chamois.

* * *

Grease the upper inside edge of the pan in which chocolate is being made and it will not boil over.

* * *

If a gloss is desired on linen add a teaspoonful of salt to the starch when making.

Our Pattern Service

A PRETTY, becoming, comfortable house dress, easy to make, easy to slip on, easy to launder! Is there such a thing? Indeed there is, and its number is 2295. In addition, this truly remarkable pattern will turn out a dress that is something more than presentable, especially if you choose a becoming material and embroider the pockets and odd little panel front. No. 2295 cuts in sizes 16 years, 36, 38, 40, 42 and 44 inches bust measure. Size 36 requires 3 yards of 36 inch material, with 1/2 yard contrasting. Pattern, 12c. No. 718, the hot iron transfer which comes in blue or yellow, is 15c extra.

2295 Emb. 718

SPRING is in the air, even if winter keeps us stormbound, and the hints of spring fashions are seen in the new patterns. Especially are skirts showing odd touches and pleated flounces or half-way bands such as 2309 shows. Of course if you don't like them, you can leave them off; No. 2309 cuts in sizes 16 years, 36, 38, 40, 42 and 44 inches bust measure. Size 36 takes 4 1/2 yards of 36 inch material. Pattern, 12c. The hot iron transfer pattern No. 706, which comes in blue and yellow, costs 15c extra.

2309 Emb. 706

A straight line slip on dress, loose enough to be comfortable, yet with a modified belt effect that keeps it from being baggy, is No. 2304, which young girls and older women will alike approve of. A cloth dress for winter and a linen dress for spring may well be made from the same pattern. No. 2304, cuts in sizes 16 years, 36, 38, 40 and 42 inches bust measure. Size 36 requires 3 yards 42 inch material, with 1 1/4 yds contrasting. Pattern 12c.

2304

TO ORDER: Write name, address, pattern numbers and sizes clearly, enclose correct amount and send to Pattern Department, AMERICAN AGRICULTURIST, 461 4th Ave., New York City.

And how about the new spring catalogue. We are expecting it from the printer any day and it is going to be a "best yet." As usual, only 10c. If you add that amount to your order, we will send you a copy as soon as they are ready.

under, place the table across the lap of the patient, and bolster up the end with pillows. This makes an ideal bed table and will hold a tray, or writing materials, or a magazine.

For a home made backrest a wash-board or other wide board and a few pillows are required. Put the wash-

Spring Is (Almost) Here!

This is the cover of the new Spring Catalogue. Makes you feel as though spring were already here, doesn't it? Forget snowdrifts and falling thermometers and consult it for what you will need a few weeks hence. This Fashion Book, only 10c, can be ordered from Pattern Department, American Agriculturist, 461 Fourth Avenue, New York City.

a mash wire to keep Tabby off, for she will make a meal of a month's rations. One feeding station I know of is strung on a wire and hangs midway between two posts; another one of last winter was a cocoanut hung up by wire, with one end broken off and the cavity filled with bits of meat, suet, potatoes, anything handy; then after this was eaten here was still the meat of the cocoanut which was gobbled up to the last crumb. Still another food holder is made of deep holes bored in a block of wood, then filled with melted fat containing left over bits from the table.

Never, never throw away apples that are getting soft in the spring; feed them to the early robin, for he is as fruit hungry as any little boy, and if he gets acquainted in this agreeable manner, he will perhaps bring his bride and set up housekeeping in one of your trees.

Did you ever see the peaceful domestic scene of Mother Bird feeding the babies? Worm after worm follows each other down those yellow little throats and then Mother herself swallows an even dozen, and all this at only one meal. How many bugs and worms must this one family consume during the entire summer? I then, think of all the different families of robins alone that you know of and you will grow dizzy trying to estimate the number of harmful bugs destroyed by them.

—Orrin K. Robinson.

When Sickness Is A Pleasure

THERE are few of us indeed with the exception, perhaps, of some unfortunate, whose chief sorrow seems to be that they "enjoy poor health," who find much pleasure in being ill. Hence the

How To Rent Money

(Continued from Page 146)

about \$200 back interest on the mortgage.

At this point the mortgagee took alarm and threatened foreclosure. This old couple were in danger of being sold out. Then there came a young married couple, ready to buy this farm, but they themselves had only a few hundred dollars, hardly enough for immediate working capital, not mentioning repairs, back payments, much less any purchase money.

Other Credits Than "Property Ownership."

Nevertheless this situation was not viewed as at all different by a competent business advisor, even though in this case the Federal Land Bank, limited to a maximum of 50% loan on a conservative valuation, could not adequately meet the situation.

But the local bank recognized other "credits" that property ownership in this young man. He possessed several assets better than mere "property", viz: a reputation for integrity, the name of being a successful manager at a former place, and the credit of having saved his wages. That is, his honesty, his ability and his thrift were established. He was what business calls "a good risk", exactly as a young person of good body and habits is a good physical risk for a life insurance company. So this is what took place:

The old people offered to sell for \$3500. The local bank's full value appraisal (taking account of the underlying land, orchard and timber values) was \$4,500, and it was willing to loan \$2,500, as a first mortgage thereon.

How Good Planning Did It.

The young man bought the farmstead of the old couple at their own figure, with which they were more than content, paying them cash in hand \$2,000, (out of which they must retire the present mortgage and back interest); a second mortgage to them of \$1,000, and his personal note for the balance, \$500, as they wished to stay in the old home, renting the "wing" and a little land.

The local bank's first mortgage loan (with his own \$500) gives him \$3,000 cash to pay the above \$2,000 with, and leaves a working capital of \$1000 with which to pay taxes, make most needed repairs and begin to re-stock the place.

Now let us figure this young farmer's financial status. His fixed charges on the above debts are 6% on the total of \$4,000, \$240 per year (\$20 per month) as a sort of "rent"—one-eighth of which, however, he gives, not in cash, but as leasehold to the former owners, which will also finally retire his \$500 note to them. Besides this, both mortgages carry amortization clauses that permit him to retire them also at the rate of \$100 each per year. This, however, is not "rent", but money saved—\$200 per year literally laid up in the most effective possible way. They will finally thus own the place themselves, free-and-clear. Altogether they are paying annually what would amount to a very moderate rent, one-half of which is not "paid" at all, but saved.

And all this was made possible by using the local bank, which loan the

Service Department

On the Habit of Borrowing---Some Legal Tangles

NEXT to line fences, perhaps nothing makes trouble between farm neighbors quicker than an over-developed habit of borrowing tools. It is not possible or practical for farmers with comparatively small farms to invest in enough tools to do all of their work. Therefore, a certain amount of borrowing or cooperation among neighbors in the matter of tools is necessary. But the difficulty is, the habit of borrowing is too apt to be mostly one-sided and is too often over-done. Usually, also, the man who runs to his neighbor every day to borrow something is none too careful in returning the tools on time, and in the same good condition in which he received them.

The Service Bureau of AMERICAN AGRICULTURIST frequently gets letters on this subject, similar to the one which follows:

"I had a one-horse hay rake which I loaned to a neighbor in September, 1923. This hay rake was in first class condition, practically new, as I only had purchased it two years before, and as I have about ten acres of hay to harvest each year, the rake had been used very little.

"The neighbor to whom I loaned the rake in some way broke it, and I have been to see him at least ten different times, and he will not repair and return it.

"Will you kindly inform me as to whether this man may be compelled to return the hay rake to me in the first class condition as I loaned it to him? And will your Service Bureau handle this case for me?"

We referred the letter to our attorney to get the law in the case, and he answered it as follows:

When you loan a tool you expect of course that it will be used. Therefore, you cannot expect that it will be returned to you in exactly the same condition that it was in when you loaned it. In other words, you must expect the usual wear and tear. If this was to be fought out in a court, the usual wear and tear would probably include any small breakage that might ordinarily happen to a hay rake, like the loss of a tooth or a similar break that was not serious and that usually happens in ordinary work. But if the break was out of the ordinary and serious, your neighbor could be forced to repair the damage.

A serious break might be, for instance, a badly damaged wheel, a broken shaft or some similar mishap that would not ordinarily be expected to occur. However, if your neighbor wanted to contest the case, you would have to go to court with it and this is always inadvisable, for almost without exception such cases stir up neighborhood feuds and their costs almost always exceed anything gained, even where you win the case.

If you will write us the full particulars, tell exactly what it would cost to repair the damage, we will be glad to write your neighbor, giving him the law in the case, and asking him to make the necessary repairs and return the rake immediately. However, this letter of course, may not do any good, and then you are faced with two alternatives; either to take the rake back as it is, or else to bring suit against the man.

We are returning the money order which you sent us, as there is absolutely no charge for this service.

former was mistaken. When a man dies, his property is subjected to an inheritance tax, in order to assess which his property has to be appraised.

Upon the appraisal value a tax of from two to ten per cent is levied. This tax must be paid before those who inherit or take under his will become entitled to his property. But property owned by the widow during the husband's life time, remains her property after his death, and no power under the sun can compel her to pay for it again.

A Question of Assessment

Can a farmer be compelled to pay tax on coal under his farm if it is not developed; and he cannot operate it, and derives no benefit therefrom.—L. D. Maryland.

It is our opinion that the tax referred to is the ordinary tax upon real property. Such tax is levied upon the assessed value of said property, and the fact that it contains coal, even though the coal is not mined, may influence the value thereof.

It will be well to discuss the situation with the assessor, and try to influence him to reduce the assessed value.

Line Fences Again

I moved to where we are now living three years ago last October. At that time the man on the next farm came over and said the fence in the rear of my house was half his and half mine and that his part needed fixing and he was going to fix it. This he never has done to this day. Yes, he cut a few branches of trees and put them up as well as some of the broken rails, but when he put his cows in the field the cows simply went right through. But nothing was done even though we told him of it.

Last spring I had my lot seeded down. This man put his cows in his field with a boy to watch them, but while the boy was chasing some cows from the fence line at one place others got over in my lot at another place, and we told him of it again. Then he said if we sued him he would send me a big bill for pasture that my horse had in his lot. Well, I cannot help it if my horse gets in his lot. If he had the fence fixed, my horse could not get into his lot. I am tired of telling him about it and he does not pay any attention. This spring I would like to put my horse in my lot, but I shall be afraid to do that as he will get in their lot and out on the road.—Wm. McC., New York.

One would scarcely expect a line fence dispute to arise in a town called Amity. Having arisen, however, there is a way to have it settled, and this we are very glad to tell you.

The Town law provides that in a case such as yours the erection of a suitable fence can be compelled. To do so you are required to appear before the Board of Fence Viewers for your County and register your complaint. The Board consists of the County Commissioners and you will find them at the County Court House.

It would be well to stop in and discuss the matter with them, and a fence will then be forthcoming very soon.

Collected Several Dollars

In reply to your letter of recent date, I received the money for my poultry. I am enclosing the statement that I received with the check. I am very thankful to you for helping me get my money, for I know that I would never have received it if it had not been for you looking into this matter. If I owe you anything for this please let me know and I will send you the money at once.

I appreciate your kindness very much and will do all I can to show you my appreciation.—Mrs. C. D., New York.

Often we are asked what the charges are for service to our subscribers. This service is absolutely free. We are glad to help wherever and whenever we can do you any good.

We Are Glad We Could Help

"I want to thank you for the settlement I got from the Corning Flower Shop. I received a check from them yesterday for what they owed me, \$11.13.

I am very grateful to you, for I think I would not have gotten one cent if it hadn't been for you people, for I had written them about four times, and the last time I told them the next time they heard from this matter it would be from someone else, and even after that I didn't get any reply from them. If you care to use my name in your paper where they have had satisfactory settlements you have my permission to do so."—Mrs. M. M. M., Steuben County, N. Y.

A Fair Adjustment

SEVERAL weeks ago in this department we referred to a difficulty one of our readers, Mr. G. B. Duncan of Middleburg, had through purchasing stock in the Grocers Baking Company, at Schenectady, New York. When we took this up with the Grocers Baking Company, Mr. D. L. Marshall, one of the officers, said that the company itself did not make a practice of buying back its own stock, but he himself had faith enough in the company to be glad to take over Mr. Duncan's stock, and he sent us a check in full payment for the same.

We believe absolutely in fair treatment, and inasmuch as we once referred to this company rather doubtfully in these columns, we want to state now that Mr. Marshall was more than fair in buying back Mr. Duncan's stock. We have no doubt that this company is doing a perfectly legitimate business.

We still must make the point, however, that farm people with small amounts of capital, representing their life savings, farm business, in government bonds, or in the high grade securities of well established corporations of long standing, should invest them either in their own

How To Rent Money

Continued From Page 174

bank needed and was glad to make. The whole transaction contributed to the local community prosperity and to the success of all concerned—even the old mortgagee relieved and pleased, because he did not have to do the unpopular act of foreclosing.

But, digging deeper, this sale and loan were made possible at the local bank by the good name of the borrower, plus the fact of his having that little \$500 cash capital in hand. And notice this: the final insurance of success of the whole plan, that gave the bank business, made the old folks happy, and placed this farsighted young couple in their own home, and in a position to carry through the plan, hinges on that \$1,000 working capital, remaining in the bank as a checking account.

The Inventory Tells Where You Stand.

If at any time this young farmer finds his bank balance low, he can arrange with his banker to deposit his own note, which, discounted, will keep his working capital unimpaired, permitting him to pay cash the year round.

He is thus paying slightly over 6% for the hired money, but most bills that he so promptly pays by bank check being "net 30 days," can be discounted 2% for cash, which equals 24% per year on the amount so used, a direct saving of 17% or 18%, itself an excellent profit, besides the reputation of being a prompt payer, the best asset any business man can have. Besides a cancelled check being a perfect "receipt" for anything paid, he is "safe" in every transaction. It is a finished transaction, settled.

And, finally, when his first year is past this farmer's annual inventory will enable him by comparing it with that made at the beginning, to present an effective statement of his affairs to his banker where he deposits and borrows, thus maintaining his banker's confidence.

EASY NOW TO SAW LOGS AND FELL TREES

WITTE Log-Saw Does the Work of 10 Men At 1/20 the Cost—Saws 25 Cords a Day.

A log saw that will burn any fuel and deliver the surplus power so necessary to fast sawing is sure to show every owner an extra profit of over \$1,000.00 a year.

Such an outfit is the Witte Log-Saw which has met such sensational success. The WICO Magneto equipped Witte is known as the standard of power saws—fast cutting, with a natural "arm-swing," and free from the usual log-saw troubles. It burns kerosene, gasoline or distillate so economically that a full day's work costs only twenty-two cents.

Wm. Middlestadt reports that the Witte has replaced forty men using buck-saws. Hundreds of users saw as much as twenty-five cords a day.

Mr. Witte says that the average user of a Witte Log and Tree Saw can make easily \$50.00 a day with the outfit and so confident is he that he offers to send the complete combination log and tree saw on ninety days' free trial to anyone who will write to him. The prices are lowest in history and under the method of easy payments spread over a year, only a few dollars down puts the Witte to work for you.

If you are interested in making more money sawing wood and clearing your place at small cost, write Mr. Witte today at the Witte Engine Works, 6803 Witte Bldg., Kansas City, Mo., or 6803 Empire Bldg., Pittsburgh, Pa., for full details of his remarkable offer. You are under no obligation by writing.

What About Inheritance Taxes?

I have been reading American Agriculturist for quite a number of years and have always enjoyed its pages very much, especially the advice you have to offer farm people.

In case a man dies and leaves a widow and children, does the U. S. A. court oblige that widow to have her personal property appraised and pay for it the second time, when she can prove that she has paid for it once and it is in her own right? The women of this state (Penn.) tell me this is law here. I am not a native of this state, but if I ever have to be placed in some women's places I know I shall fight such unjust law to the end and appeal to United States court for justice.—Mrs. C. W. J., Pennsylvania.

We are glad to tell you that your in-

**Walsh NO-BUCKLE
HARNESS**

**NO BUCKLES TO TEAR
NO RINGS TO WEAR**

**30 DAYS
FREE TRIAL**

Send No Money I send you a set of my No-Buckle Harness to try on your own team, on your own farm, for 30 days without cost or obligation to you. Glad to send it—that's my liberal offer. Examine it, use it, test it in every possible way you can think of.

Then if you don't think that the Walsh is the best looking, strongest and handiest harness you ever laid eyes on, slip it into the box and return it to me. You don't even have to pay the return charges. I urge you not to wait a day before you get my new, free book that tells all about my special free trial offer. My harness book describes in detail this double-wear harness that has no buckles to tear straps, no rings

to wear straps, no buckle holes to weaken straps. In a few years this wonderful harness has swept the country, making it necessary to enlarge my factory four times to take care of orders. A proven success on thousands of farms in every state. Post yourself on this latest, most up-to-date way of making harness. Write for my new, big, free book now.

See How Buckles Weaken and Tear Straps

The WALSH Has No Buckles—No Rings

Here is the cause of all your harness trouble, repair expense, breakdowns. Why put up with this when you can get a Walsh, which has no buckles—no rings.

See How Rings Wear End of Straps in Two

AS USED IN
**Walsh
HARNESS**

AS USED IN
**BUCKLE
HARNESS**

From photo of a test that shows how buckles weaken straps
WALSH HARNESS has no buckles, no buckle holes
Every strap has its full strength

STRAP WITHOUT BUCKLE HELD UP TO 1170 POUNDS PULL

SAME STRAP BROKE AT BUCKLE 360 LBS. PULL

**Three Times Stronger than
Buckle Harness**

Buckles Weaken and Tear Straps. As an example, a Walsh $1\frac{1}{8}$ inch breeching strap holds over 1100 lbs. The same strap with the buckle will break at the buckle at about 360 lbs. pull. Ordinary harness has 68 buckles. Walsh Harness has no buckles—easy to see why Walsh is three times stronger than ordinary harness.

Walsh "Special Test" Leather

Users say that the leather used in Walsh Harness is the best they ever saw in Harness. I use only the choicest Packers' Northern Steer Hide Leather—tanned by the old-fashioned six months bark tan process. I want you to send today for my free book and read

about actual test in steel testing machine—it proves that Walsh Leather holds twice as much as ordinary harness leather. Ask me to send you at once my free book, full of interesting and valuable information—explains fully how my leather is tanned and tested.

Over 30,000 Users

Praise it.—Endorsed by Agricultural Colleges Government Experiment Stations and leading horsemen. Team with Walsh harness took first prize at Wisconsin State Fair. Mr. G. G. Anderson, Aitken, Minn., who bought his 1st Walsh 5 years ago and bought 3 new sets since for his other teams, says, "Walsh has buckle harness beat a mile"

**Easily Adjusted to Fit
Any Horse**

In ten minutes, a Walsh Harness can be adjusted to fit any horse perfectly, and it's a comfortable harness because it fits. It is much easier to put on and take off. No stubborn buckles to bother with when winter cold bites your fingers and straps are stiff. The adjustable strap holder, used exclusively on Walsh Harness, does away with all buckles and rings, and the harder the pull the tighter they hold: the world's greatest advance in harness making. No other harness ever made can equal it. Made in all styles, Breechingless, Side Backer, Back Pad, Express, etc., all shown in my big free book.

Be Prepared for the Spring Rush

Send for your copy of the big, free harness book today. Post yourself on this wonderful harness, so you can make your decision and get your trial order in quickly as possible. Have your harness ready for spring work when it comes. A delay at that time because of old, broken-down harness will cost you dearly.

\$5 after 30 days free trial

Balance easy payments. Selling direct by mail to you enables me to give highest quality harness at lowest prices. There's a copy of my book waiting for you. Write today for book, prices, terms and how to make money showing Walsh Harness to your friends and neighbors.

DIBBLE'S Seed Potatoes

Northern Grown From Selected Seed Stock, Planted on Soils Especially Adapted to Each Variety Produce a Quality That for Vigor, Purity and Productiveness is Unexcelled.

This year most all varieties of Seed Potatoes are in free supply owing to the generous 1924 crop and prices are comparatively low.

Our List comprises 10 varieties "Best by Test," early, intermediate and late, in any quantity from barrels to car loads.

EARLY OHIOS	RURAL NEW YORKERS
EARLY IRISH COBBLERS	CARMAN No. 3
DIBBLE'S EARLY MANISTEES	SIR WALTER RALEIGH
GREEN MOUNTAINS	GOLD COIN, and
MONEYMAKERS	

Dibble's Russet

in our opinion, the best potato now in cultivation, introduced by us only about a decade ago, it has rapidly forged to the front and is considered by thousands of farmers in at least a score of states

"THE BEST POTATO OF THE CENTURY"

Dibble's Russet is round to oblong in shape, pure white flesh of excellent quality, with a russet skin. The vines grow large and rank. The most disease resistant of any variety we have ever grown. Scores of our customers have written us they were "Blight Proof" and "Bug Proof."

As to yield. On our own Seed Farms, where for years our average crop is not less than 10,000 bushels, it outyields all other varieties. Crops of 300-400 bushels are not uncommon and "The Russet gives splendid crops when others fail" is a tribute we frequently receive for this grand potato.

We want ten thousand farmers who have never grown Russets to try them this year and to help you get started, as long as our present stock lasts, we will accept orders for

2 STANDARD BARREL SACKS FOR \$5.00

Slightly higher prices for certified stock.

The Outlook For The Poultry Man

The Future Looks Good For Men Who Are Building Soundly

COUNTING chickens before they are hatched seems to be as much of a mistake for market observers and economists as for anyone else. An error of this kind is the most logical explanation of the difference between prediction and performance in the egg and poultry markets of 1924.

Last winter, the impressive expansion in the poultry industry, which had been under way since 1920, aroused a good deal of fear that serious overproduction was about to occur. The annual estimate made by the United States Department of Agriculture, placed the farm chicken population on January 1, 1924, at 474 million head. This was an increase of 12 per cent over 1923. Likewise, it was again of 32 per cent since the beginning of 1920, while the human population had gained only about 6 per cent.

Not only was the number of chickens on farms estimated to be the largest on record, but more attention was being paid to feeding and care. The stage seemed to be set for a further increase in egg production and in the number of chickens that would be raised in 1924. Most people believed that considerably lower prices would be necessary to induce consumers to absorb this increased output. For two seasons, dealers, had suffered losses on stored eggs and were disposed to be very cautious as the new storing season approached.

Washington Warned Against Overdoing It

The United States Department of Agriculture shook a warning finger. "The Agricultural Outlook for 1924," as prepared by its economists had this to say:

"The situation in 1924 clearly indicates an increase in production of both poultry and eggs. The increase will probably be such as to make an accelerated rate of consumption of eggs necessary. In view of the outlook for the industry in 1924, producers should consider carefully the results of an expansion of poultry production. Every effort should be made to obtain more economical and more efficient production, for eggs produced at a lower cost and a larger production per hen would tend to increase the profits should lower prices prevail."

Again it was demonstrated that the disaster everyone is looking for seldom happens. Producers themselves probably took some note of the possibility of overdoing their market. Then, early last spring, when dealers allowed egg prices to drop to an extremely low level, while poultry prices remained rather attractive, producers responded by selling their surplus fowls more closely than usual. The average farm price of eggs for a time was at the lowest point since 1916. This stimulated consumption of eggs in the country and in the smaller towns where eggs at retail were close to the price farmers received. Protracted cold weather throughout the spring also tended

By MARILLA ADAMS

to keep down the lay as well as the number of chickens raised. The result was that the anticipated flood of eggs never reached the large markets. It disappeared like water passing over thirsty land.

What the Records Show

The records show that receipts of eggs at the four leading markets during 1924 were lighter than in the corresponding months of 1923 with the exception of April and July. For the year of 1924, up to mid-November, the shrinkage

of eggs averaged 25.6 cents a dozen against 25.8 cents in 1923. These comparisons are all the more significant in view of the fact that urban buying power has not been quite as broad as last year.

Receipts in 1924 Below Normal

The accompanying chart gives a hint as to why both poultry and egg prices have held up so well during the rapid expansion in production since 1920. Judged by the long time trend of receipts at the six cities, New York, Chicago, Boston, St. Louis, San Francisco and Milwaukee, 1920 was farther below normal than in any year as far back as 1891. Fully half of the increase in supply since 1920 was in the nature of a rebound from a period of underproduction. Part of the remainder was to take care of the growth in population of these cities. The peak supply of 1920 was not as far above normal as measured by the long time trend as receipts in 1920 were below it. Furthermore, the decrease in receipts in 1924 will put the supply below the normal line. Viewed with a perspective of this kind, expansion in production in the last few years has not been so great after all.

The rate of increase in population makes an interesting comparison with the gain in receipts of eggs. In 1920, these cities had about 225 per cent, as many people as in 1890. Allowing for the fact that 1920 was a low year, the supply of eggs was 300 per cent larger than three decades previous, indicating larger per capita consumption of eggs as a result of the gradual gain in urban buying power.

Unprofitable Prices Do Not Last Long

The absence of any prolonged period of diminishing receipts as shown by this chart indicates that periods of unsatisfactory prices for

eggs are not very severe or long lived as a rule. While distinct cycles are noticable, especially since 1905, they are not as conspicuous as they are in most other branches of agricultural production. The whole period from 1911 to 1920 is probably the most pronounced case as egg production was retarded because grains advanced more rapidly when the war broke out than such commodities as poultry and eggs which are produced almost exclusively for domestic consumption. Commercial poultrymen who were obliged to buy a good deal of their feed had a difficult time during this period and many of them were forced out of business.

Looking forward from the present stage, there appear to be no extremely large clouds on the poultryman's horizon. The danger of severe overproduction, if it ever existed, seems to have passed for the present without the necessity of any long drawn period of liquidation of flocks. More attractive prices for corn, wheat, hogs and other farm products may eclipse the popularity of the hen for a while. It is possible that, allow-

(Continued on Page 194)

LONG TIME TREND OF THE SUPPLY OF EGGS

The zigzag line shows annual receipts of eggs at New York, Chicago, Boston, St. Louis, San Francisco and Milwaukee. The straight line shows the secular, or long-time trend, as computed mathematically. The chart shows:

1. That receipts in 1924, as partly estimated, will be below the long-time trend.
2. That the supply in 1920 was considerably below normal and that the increase from 1920 to 1923 did not bring receipts far above the normal line.
3. That receipts did not increase a great deal in the period from 1911 to 1920, when grain prices were relatively high.
4. That there have been fairly well-marked cycles in production in the last twenty years with about four years between the peaks.

amounts to 8 per cent which is the first time in four years that receipts have failed to show a progressive increase.

Receipts of dressed poultry at these same markets were heavier than last year in each of the first seven months of 1924. This period covered the windup of the marketing of the large crop of poultry produced in 1923 and the weeding out of flocks during the period when egg prices were temporarily unsatisfactory. Combined receipts since July have been less than in the same period of 1923.

This shows how quickly accidental conditions, such as the weather, and the natural adjustments brought about by price may take care of a supply of poultry and eggs that seems to be getting out of balance with the demand.

Because of the corrections brought about in this manner, prices of both poultry and eggs are actually higher than at this time a year ago. Moreover, the unweighted average farm price of chickens for the first nine months of 1924 was the same as in the corresponding period of 1923, standing at 19.4 cents a pound. The farm price

State Grange Meeting A Success

FROM all reports, the meeting of the New York State Grange at Saratoga Springs was one of the best ever, both in the good spirit present and in the effective work done. Don't miss the interesting account of this session on Page 187.

Washington the Farmer

ONE spring day some years ago it was my pleasure to take a class of senior high school students on an excursion to Washington and while there we had the privilege of traveling down the Potomac to historic Mount Vernon, Washington's old farm home. (See picture on page 184.) After we had arrived, I left the young folks to wander at will and went out to lie in the mellow spring sunshine on the lawn that sweeps gently from the sheltered porch down to the old Potomac.

As I lay there and as I walked later through the barns and out buildings standing much the same today as they did in Washington's time, I understood why Washington was so anxious to retire from the exactions, criticisms and turmoil of public life to his peaceful and beautiful farm home at Mount Vernon. I knew also why he said "Agriculture is the most healthful, the most useful and the most noble employments of man." It came to me too that in spite of the constant change in material things and in spite of the large amount of so-called progress that has been made since Washington lived, the little simple fundamental things of life do not change. The verities are eternal.

And not the least of these fundamental things is that of simplicity. Washington has been called an aristocrat. Possibly, and from one manner of speaking, he was. But no one can visit Mount Vernon without knowing that he loved simplicity. In spite of the years that intervene, his life when he was at home was strangely like that of our farm people today. Simplicity is an attribute of true people of all ages. We do not need too many material possessions to be happy. In fact, too many things clutter up our lives, increase our responsibilities and often make us unhappy.

Possibly because of my own farm background, and because my interests are tied up in the welfare of farm people, I like to remember that George Washington was first of all a farmer and that he would rather have farmed it than been President of the United States. I like to think of his returning to spend his last years at the

quiet and beautiful old farm home on the Potomac. I like to know that the historic societies have preserved his home so that it is today much the same as it was when Washington lived. And it is good to know too that finally when rest came to Washington, he could sleep the long sleep within a few yards of his home and under the same kind southern elements, the same winds and rains and sun that grew his crops.

—E. R. EASTMAN.

Committees for Tax Reduction

THE thousands of letters that we have received from farmers on the deplorable tax situation show that they are practically unanimous that there must be tax relief for agriculture. But it takes something besides unanimous agreement to get a job done. To put it plainly, it takes work, and a lot of it; and where the job is as big as this one is, it is more than a one-man task.

AMERICAN AGRICULTURIST is doing what it can. But we need help and we particularly need help where the tax situation is the worst. That is the locality. Therefore, we are making the following suggestions:

In nearly every community in New York, Pennsylvania and New Jersey, there are either Grange or Farm Bureau organizations; in many there are both. There are also many farmers' clubs and other organizations which have regular and frequent meetings. Will you help us get a local tax committee connected either with the Grange, The Farm Bureau, or other farmers' local organization appointed at your next meeting? It should consist of from three to five members. It will be the duty of this committee to make a study of the tax situation and report its findings to coming meetings of your organization. It will be fairly easy for the committee to get figures showing the cost of your school district, village, town and county governments. It can find out what your schools, your roads, your public buildings and your official salaries are costing you. Members of the committee may interview village, town and county officials. Maybe you can get some of these officials to come before your meeting and talk on the tax situation, giving you the facts.

When you have the facts, you will be in a position to urge such reforms as cutting out local collectors, paying the taxes direct to the county treasurer, and the publication of budgets and of tax statements with your tax bills. The mere fact that you have such a committee operating in your community and a number of them in your county will have a big effect upon local officers in making them more conservative about spending your money.

AMERICAN AGRICULTURIST will publish the names of tax committees if you will furnish them to us, together with local statistics about taxes in your county and localities. We will also furnish suggested programs for tax discussions and get all the information for your tax committees that we have available. This is in addition to what we are trying to do in the reduction of state taxes.

Of course, all of this will take some time, but we are in for a long period of high taxes, and there is but one way to get them down; that is to organize public opinion. Is this job important enough to you to help us start something in your community? Let us know how we can help.

A Law That Would Help

ONE of the recommendations for legislation on the rural schools which has been made to the present session of the New York State legislature is that there should be provision for state aid for the tuition and transportation for pupils above the sixth grade when sent from district schools to schools of higher grade. This suggestion is right and we believe that country parents will join with us in hoping that the legislature will pass such a bill.

The district schools, with proper equipment and teachers, are right for the children of the lower grades, but when the boys and girls get above the sixth grade, most of them quit school. Large

American Agriculturist, February 21, 1925

boys and girls feel awkward and out of place with the smaller children, and they do not get the incentive and the encouragement and the proper teaching that lead them to continue their education at this critical time. On the other hand, the difficulties of transportation and of tuition make it impossible under our present system for most of these older boys and girls to continue their schooling elsewhere.

A provision for more state aid on some kind of an optional plan which would enable parents and the districts to give these older children a chance for better schooling without increasing the taxes or the financial burdens to parents would go a long way in helping the large country boys and girls to get an education.

Don't Do It If You Don't Want To, But—

"The farmers do not take favorably to the 'Kill A Cow' idea. The cow would pay a profit if the price of milk were what it should be."

B. R. F., New Jersey.

WE fully agree with the writer of the above letter that the price of milk is not what it should be. About this, there can be no argument. We positively do not agree with the thought, however, that all of the cows now in existence should pay a profit. It would be very easy to make AMERICAN AGRICULTURIST popular by always telling farmers just the things they want to believe without regard to the real facts or the truth. At the risk of being unpopular, we can work upon only one policy, and that is to tell the truth and to give the facts, even when these facts hurt, and when they make rather bitter pills to swallow.

Neither can farming as a whole nor any individual make any great amount of progress by trying to dodge the truth, and the bitter truth about this dairy business is that not only is the selling price of milk too low, but the costs of production are too high—and one of the chief reasons why they are too high is the fact that there are hundreds of thousands of cows that are a burden to their owners and to the industry. They should have gone for meat long ago.

Let us suppose for a moment what would happen if the price of milk could be boosted temporarily to where the low-producing cows would pay. In the first place, this would raise the retail price of milk in the cities so high that consumption would immediately and very rapidly decrease. In the second place, the price would encourage heavy feeding of expensive grain, the crowding into production of more scrub cattle, and the bringing in of marginal milk from distant and manufacturing territories. All of which would, of course, lower the price immediately.

Better marketing methods can and will bring the prices of milk to above their present low level. Prices must rise if dairying is to endure, but let no one get the foolish hope that they will ever get high enough for any length of time to pay a profit to the man with a lot of scrub producers or to one with careless feeding or other unbusinesslike methods of production. We are entering a new era in farming. It is now a business.

Eastman's Chestnuts

WILL some of our womenfolks please tell me why a bride always looks so happy and self-possessed at a wedding while a poor bridegroom appears as if he had one foot in a grave and another on a banana peel? Of course, I have my own ideas as to what the real reason is, but I would be glad to know what the womenfolk think about it too. The countless thousands of unfortunate males, after they have swallowed the bait, hook, line and sinker, and stand on the brink of the marriage precipice will sympathize with poor Erasmus in the following story:

The worried countenance of the bridegroom disturbed the best man. Tiptoeing up the aisle, he whispered:

"What's the matter with yo' all, Erasmus? Has yo' lost de ring?"

"No, I ain't lost no ring," blurted out the unhappy Erasmus, "dat's safe enough. BUT I'S CERTAINLY LOS' MAH ENTHUSIASM!"

Readers Respond to League Article

Flood of Letters Show Farmers Appreciation for Facts

I want to congratulate you for the fearlessness and fairness with which you have presented the mistakes and accomplishments of the Dairymen's League in the issue of February 7th. The most serious indictment against many forms of agricultural organization is the fact that the bright side has been continually held up before us farmers, and the dark side, the mistakes and the constructive criticisms have been squelched. For this mistaken policy these organizations will suffer inevitably, because, when we farmers finally learn the whole truth, the most natural result will be a violent and widespread reaction due to a deserved loss of confidence in all forms of agricultural organization. As long as you publish the whole truth in a courageous and unprejudiced manner, no matter whom it affects, or hurts, you may rest assured that you will always have the hearty support of New York State farmers.—Niagara County.

* * *

Will Do Good

TO my mind your piece as to the milk situation is a masterpiece. I received the paper today and I had to read most of that even before reading "The Trouble Maker", and that is going some. I do not see how anyone could take offense, and I anticipate that one article is going to do a whole lot of good among the farmers. I had wished for a long time that you would come out and have your say. I am a strong League man but know it is not perfect and want to have honest criticism; but where it is all black as to the Leagues side and the other is O. K., I cannot stand it. I want to let you know that I for one highly appreciate your article.—Delaware County.

* * *

A Market Every Day

I HAVE read and reread your article in this week's issue of "Old Reliable" on "What Shall We Do With the League?" I find it the most unbiased of anything I have yet seen regarding the League. I know you are in a position to give facts, while many of the articles written are written by persons who do not know what they are talking about.

I have been a League member from the start and have put in some anxious hours, for we have had many discouraging times since we started. I agree that many mistakes have been made but on the whole I think we have made wonderful progress, and feel more encouraged with the present outlook than I have ever felt. I am not on a salary, just a common milk producer, and working for the producer's interest.

Last October I heard a fine explanation of the "spread" but as you say, it is hard to get the information to the rank and file of the members. I most always call a local meeting after the sub-district meeting, but only get a few out. We have a Sheffield plant near here and during the last nine years, they have shut their doors to us as an organization four different times. Isn't it worth a whole lot to know we have a market for our

milk every day in the year? Hoping your article will bear some fruit, and wishing success to AMERICAN AGRICULTURIST and also to our League.—Washington County.

* * *

Hits Hard, Straight and Fair

THE AMERICAN AGRICULTURIST came today and at the first opportunity tonight I read

A Dairy Marketing Program

IN the February 7th issue of American Agriculturist we published an article on the League and the general milk marketing situation, and closed by making a few suggestions which, we believe, if put into practice, would do much to restore confidence and better prices in the dairy business. Since this article appeared, letters have been pouring in from both those within and without the League showing that farmers appreciate having the facts when those facts are presented fairly and without prejudice. Some of these letters are printed on this page. Because this article has met with such splendid response, we are repeating here the suggested constructive program. For further explanation, turn back, if you have not already done so, and read the original article in the February 7th issue. Here is the program:

FIRST, stand by your organization. This applies not only to the League, but to other milk organizations throughout the East which are working to solve this perplexing problem. It is a mistake to throw away what you have already gained even though the results may be smaller than you expected.

SECOND, let us stop quarrelling and fighting among ourselves and our organizations. Time may show that the other fellow was right. More likely all are partly right and each individual and each organization may be able to contribute a little progress toward the general solution. Have a good word for the other fellow. "Whom the Gods would destroy they first make mad".

THIRD, study your organization, attend your meetings, and make an effort to get into the leadership the best qualified men. Honest now have you as an individual made any effort to improve the situation?

FOURTH, if you are a League member, demand your directors stop serving in a double capacity, that of both officer and employee.

FIFTH, demand that your directors furnish you written facts and details regarding policies and work of your organization, including money spent or invested in salaries, milk plants or other property, and money received in the sale or rental of the same. It is your money and your organization. You have a right to the information. Moreover, the good of the organization itself depends upon confidence and comes from a frank discussion of mistakes as well as successes.

SIXTH, instruct your directors to modify when necessary policies and details to fit the constantly changing conditions in the milk marketing business. Cooperative marketing is blazing the trail and when you get on a wrong road, the quicker you back up and try again, the smaller the loss from the mistake will be. Recent radical changes in League policy show the directors are beginning to realize this.

SEVENTH, let us all have a little more patience and charity. Progress is slow. The best of organizations will not substitute for poor farming. Let us not expect the impossible, but all work wholeheartedly and in a friendly spirit in our different ways and through our different methods toward the common goal.

article on the League. It hits hard and straight and yet fair, studiedly so. Moreover, it is constructive. I have no doubt it will do a lot of good. It is especially timely because the League is on the up-grade. Keep a stiff upper lip. For every man you hurt you helped

a thousand. I will be anxious to hear about the comeback.—Monroe County.

* * *

Right, If Done Right

I WAS much, very much pleased this A. M. in reading your very article "What Shall We Do With the League?", and to note throughout the same things which I have spent many hours of thought and worry about. I feel sometimes like laying down, but cooperation is right, if we cooperate right; and it is not to exemplify our powers in fighting at each other, but to show our strength by fighting with each other. We will carry on with this belief just as long as we live in the hope that the future will be the better for our efforts and with the comforting thought that an heritage is being created for the dairy industry of the future. In your busy life, if you find time to send me a word or two I shall appreciate it greatly. Remember always, even though you do not hear from me, that I am thinking of you and wishing you every success and continued health and strength to go forward.—Herkimer County.

* * *

Impartial Discussions Needed

I HAVE just read again with keen interest your exposition of the League situation. I still feel that what you have said is sound and fair and right. Heretofore, the League has been discussed in one or the other of two ways—either by the man who was an avowed enemy and could see no possible good in the movement or else by the uncompromising defender to whom any kind of criticism of plan or personnel is black treason. Of course I know you are going to have some correspondence, and some men, are going to pound you hard, but still I feel you have done the cause a genuine service. Don't let a few words trouble you.—Schoharie County.

* * *

Honest Criticism Good

IN reading over your last article on the League, I was mighty well pleased with the way you handled that touchy important problem. The criticisms were great, honestly put and bound to react in a manner which will be beneficial to the League.

We need more fairness in our discussions. Many of us are inclined to become heated and vexed thereby losing whatever poise and good judgment that we may have had. In all fairness to such a problem, keep up the good work and we all shall be benefited by it.—Otsego County.

"A Home That Never Was"

MR. Jared Van Wagenen, Jr., has contributed a great many fine stories to AMERICAN AGRICULTURIST, but none of these have attracted more attention than his story in a recent issue entitled "A Home That Never Was."

These letters have come mostly from people who were familiar with the facts of the story and they indicate that the story as told by Mr. Van Wagenen is almost exact in every detail except for the incident that the girl afterwards married and went West, presumably beyond the ken of her old friends.

FERTILIZERS

Let's Stop Fighting

A Plowhandle Talk on Milk and Other Problems

By H. E. COOK

IF I gauge farm sentiment aright, it is getting better—and as one feels so he is. We in the North Country almost entirely are cow keepers and milk makers and so I can only speak in a contact way of dairymen—not many are getting cost of production from a cash basis standpoint paying current prices—and I can't remember when we did.

H. E. COOK

Dairying has always been a family affair. Production has been based upon the no-cash-paid system and may be that is the best way. Anyhow, if co-operation were as scientifically executed as in the farm home we would have reached the farm millennium. League people are more confident and I think they have a right to be optimistic. I have been very much discouraged, but the recent radical changes in administration look good.

When League milk is worth just a little more than the same class of milk sold through other channels, no questions will be asked. Eastman's article in the February 7th issue is the most helpful, fair and outstanding analysis of the League and its work that I have read, and must do a lot of good. Supposing all hands take up the golden rule, stop scrapping for one year, sit together around one common table and watch results.

* * * * *

It Shows On the Balance Sheet

I know in our own business if we have a fight on in any sort of style or fashion it shows on the balance sheet. When we are, all of us men, women and children, altogether about 30 in number, living peaceably, there is not only more satisfaction in doing our job but more profit. Even a matter so far removed as a scrap among the children reacts on the business as a whole. There is no business where confidence, cooperation and good feeling is so necessary as upon a farm where the labor is all performed by those outside the family.

Farm work is scattered and not so easily organized as shop work. Every person must feel that he is to some extent self-propelling. Harmony and cooperation are the key to success.

* * *

Flowers Are Blooming in California

We have a daughter living in Redlands, California. A letter from her before me says:

"You are certainly having a hard winter. I cannot realize it when I look out and see the sweet-peas in bloom."

We have in our business suffered more than ever before. We sell milk in northern towns and ship by baggage and this is the first serious time we have had to get delivery without loss—no train and mothers calling to know what is the matter that they do not get milk for babies. All of this is at the same minute that sweet peas are in blossom in California. Where is the balance? Why not all go to Redlands?

I'll tell you. She wants to and is coming to spend the summer with us. It is said that fighting snow drifts while superintendent of the R. W. and O. R. R. from Syracuse and Utica north made "Pat" Crowley president of the New York Central. Well, if that is true, we can furnish presidents for every kind of business in the country.

Farmers are beginning to think about labor prices for the coming season. There does not seem to be any evidence in our section of a change either higher or lower. We have had plenty of men since last September but about April 1st we have the most trouble. As a rule our competition does not come from industrial corporations at any time, strange as this statement may appear. On the other hand, married men come to us for work from cities and towns near by who feel the high cost of living, especially rents. These are people who formerly worked on or rented farms and moved into town because of the apparent larger net returns for their service. These men are not skilled mechanics, but they may have farm skill. Our sharp competition comes from farmers themselves, young, husky, clear-headed men who take the lead themselves and want them only for the summer season. An extra bonus is to them a good investment.

* * *

Steady Employment A Benefit

Generally, however, steady industrious men who want an every day income will stay throughout the year even if they could earn a few dollars more in the summer time and lose a job during the winter. Where can one find a job with more net money in it than \$2.00 a day with board and care, no lost time, cheap clothing, not much preparation, no trusting out, nothing but steady interested employment and cash on demand. A steady, patient, honest worker and saver can soon have a fund large enough to buy a farm and home.

Getting good farm labor does not hinge upon any one thing, but one will find it hard to get permanent men and women without giving year around employment. Married men are not always the most active workers but if like men, the man with a home of his own has less to draw him away and the chance is he will stay longer and have the larger chance of being interested in his job. If I had to make out a score card, I should place fifty points for loyalty and interest. Some men have the faculty of turning off more work than others. But every man who is loyal will sooner or later catch up some way.

* * *

Buying Feed Ahead

Each year when the winter months begin in earnest and feed prices stiffen as they usually do, I pledge myself next summer to buy outright or contract for feed enough to last through the winter and when "next summer" comes around I do not generally do it. But this year we are pretty near to the mark—only about one year in ten will there be an outright loss. About two years there will be no grain and the other seven there will be more or less profit.

When the corn crop turns out good, September and October may be low months. When only a partial crop, mid-summer prices are likely to be the low ones. One of the keenest speculators I know, having made large sums of money buying and selling, is a guide to many of our dairymen. One of them, a money making dairymen, says when "Vet" buys many carloads if he pulls through, I feel safe on buying for twenty cows. Not bad reasoning.

I notice most buyers seldom strike the extreme low point because when prices are dropping we think they will not stop and we have to wait until a small advance has taken place. Now maybe that is a pretty safe plan after all.

In 1924, the buying season came early. I cannot quite explain the psychology of the fact that when sellers are canvassing buyers, is a pretty good time to lay in a stock. Or I find by keeping in close touch with a number of sellers one is apt to find bargains at different places during the summer and fall season.

STRAWBERRY PLANTS

SHULL FARM, Box 5, Tullytown, Bucks Co., Pa.

Time Is Stuff of Which Crops Are Made

With the Fordson, you farm for prosperity, because your acreage is broken in less time; because your furrows are the proper depth, and because your seed beds are thoroughly well made.

The Fordson saves feeding time, watering time, grooming time and hitch-up time. It needs no "favoring" or breathing spells. It will work twenty-four hours a day.

Fordson farmers finish their Spring work—plowing, harrowing, discing and seeding—at the right time, because of their ability to do more and better work when weather and soil conditions are favorable.

Better crops and bigger bank balances follow the use of the Fordson—it is a logical and time-proven investment.

Run it through your hand—

MAKE this test at the nearest fertilizer store. Take a handful of Arcadian Sulphate of Ammonia and let it run through your fingers. It will sift through your hand like dry sand.

[This means that Arcadian Sulphate of Ammonia saves you all the time and trouble of pounding and screening. And time saved is money saved.]

[Your Arcadian comes to you specially kiln-dried—absolutely free from moisture. All lumps and nodules have been screened out.]

[In short, Arcadian is ready for instant use. Fertilizing by this modern method means just one operation—the actual applying to the soil.]

Once on the soil, it quickly pays for itself in increased crops and profits. It's quick-acting and effective—guaranteed to contain at least 25¼% Ammonia.

Ask your local fertilizer dealer about Arcadian Sulphate of Ammonia. If he has no sample handy, he can get one by writing for it.

More Money from Your Crops

You can do it with seeds that have vitality and life—that are of high germination and adapted to the soil. The work of preparing the land and planting is the same whether you use ordinary seed or pedigreed seed. But the crop tells the story; added profit—often double or triple—comes from using hardy, big-yielding, Michigan-grown, Isbell's seeds.

46 Years of Better Seeds

For nearly a half century, Isbell's have been developing yield, vitality and hardiness in seeds. Ceaseless experimenting, careful selection, better growing, sorting and cleaning methods have done this. 200,000 customers have proved this profit-building quality—they plant Isbell's seeds year after year and get bumper crops. We grow our own seed—you buy direct from us, saving money and eliminating all risk of substitution.

This Valuable Book—FREE

The 1925 Isbell's Seed Annual tells how to select seeds, how to prepare soil, gives cultural directions, and quotes direct-from-grower prices. The coupon brings it free.

The Cortland Apple

"An Improved McIntosh"—Hedrick

We have heard a lot about the Cortland apple. What other variety is it like? From what varieties was it developed? Has it been tried out? What does it look like? Several folks have asked us the question. None of us are orchardists but we like a few good apples for our own use. We would like to see something in the columns of American Agriculturist about it.

—P. H. O., New York.

THE Cortland apple is not strictly a new variety. It was introduced to the trade something like 10 years ago by the New York State Experiment Station at Geneva where it was originated. Under separate cover we are sending you Geneva bulletin 497 entitled, New or Noteworthy Fruits by Professor U. P. Hedrick. This bulletin has a beautiful color plate of the Cortland apple. In that bulletin on page 3 Professor Hedrick also discussed the quality of the variety. For the benefit of those who are interested in new apple varieties we are printing Professor Hedrick's comments on the Cortland apple.

"No new variety is now receiving more attention than Cortland, the most promising of the tree-fruits that have originated at this Station. The variety is a cross between Ben Davis and McIntosh made in 1898, but the seeding did not fruit until 1906 and was not generally introduced until 1915. Cortland is of the type of McIntosh and promises to take the place of that well-known variety for all purposes. The fruits of the two varieties are so similar that there is certain to be confusion if the differences are not carefully noted. The fruits of Cortland are more oblate and flatter across the base than those of McIntosh; they average larger and possibly a little more uniform in size; they have more color and the red is lighter and brighter and the stripings and splashes are laid on differently; the bloom is much the same or a little heavier; the taste can hardly be distinguished from that of McIntosh, but is even richer if that be possible; there is a little less aroma; the flesh is firmer but just as juicy; the season is from one to three weeks later; the apples do not drop so readily. The trees of the two varieties are much the same, differing chiefly in more slender and willowy branches in Cortland. From this comparison it will be seen that Cortland is an improved McIntosh.

"Cortland is one of several varieties which will probably be introduced next year. One is an early McIntosh which ripens in August; the other is a late McIntosh which keeps from one to two months later in common storage. The beauty and high

quality of apples of the McIntosh type; and the vigor, productiveness, regularity in bearing, and great hardiness in tree of all these apples commend them as about the best varieties for New York. The fruits of McIntosh and Cortland cannot be surpassed by apples grown anywhere else in the world, and apple growers in New York have an opportunity to specialize in distinctive fruits that will bring greater renown and profits to the apple industry of the State."

Geneva Will Advise On Fruit Varieties

Horticulturists at the New York State Experiment Station at Geneva stand ready to give expert advice on the selection of fruit varieties for planting next spring. Most of the varieties of hardy fruits offered for sale by American nurserymen and many sorts from foreign countries have been grown or are now being tested on the Station grounds, it is said; and from the results of these tests and with their knowledge of fruit growing in this and neighboring states, the Station specialists are able to predict with a fair degree of accuracy the behavior of almost any variety brought to their attention.

"Within the next few weeks both professional and amateur growers will be making up orders for their spring plantings," says the Station horticulturist. "The Station fruit specialists will advise freely on the varieties best adapted to any given locality or will pass judgment on proposed plantings. Neither the large fruit grower nor the man with only a few trees or a small berry patch can afford to waste time and money by setting out varieties that are not adapted to their conditions. Thru long-continued tests with every variety of fruit that will grow at Geneva, the Experiment Station has made it possible for the fruit grower to avoid disappointment or failure by planting varieties that will not thrive under New York conditions."

Black Knot on Plum Trees

BLACK knot is a fungous disease and is the worst foe to plums in my experience. It is spreading if neglected, and when it shows up rigid measures should be followed. Use the knife freely and cut away every sign of it and if it is so bad that this is impossible then better remove the tree entirely and save others. Spraying with the lime-sulphur in winter is a preventative measure and close watching will probably save injury.—L. H. COBB.

GEORGE Washington's farm home at Mount Vernon. The place is maintained by historical associations much the same as it was when Washington left there. In many of the rooms there are interesting historical relics, including a good many of the original furnishings. Among these is the bed upon which Washington died and the chair and the open Bible beside the bed just as it was at that moment. In the house there is the key of the Bastille; which was sent to Washington by Lafayette after the capture of that famous prison. The key is of iron and is seven inches long. In the house also there are three of Washington's swords and framed pictures and papers of great historic value.

Check Your Feed Cost

BY THESE 3 Sure Easy Ways

- A** By the Milk your cows put in the pail day after day. **B** By health conditions—better development of heifers and calves. **C** By the profit in money and saving in time and labor.

Use these three ways to test your home mixed rations, or any feed you buy. You will *know* then, without puzzling your brain about proteins, percentages, digestibility, etc., what ration is best and most economical for you to feed. Sugared Schumacher Feed is proving "BEST and most ECONOMICAL" for thousands of dairymen and farmers. W. S. Kerr, Cohasset, Mass., writes:

From THE OAKS FARM Cohasset, Mass.

The Quaker Oats Co., Chicago, Ill.

"In Sugared Schumacher Feed you have a feed that will prove very profitable to anyone who gives this feed an opportunity to show what it will accomplish.

"We have been feeding it for nearly three months as the base of our ration. Visitors have remarked at the improvement in general conditions of our large herd of pure bred Guernseys. In addition to this, they have also shown a large increase in milk flow."

Test Sugared Schumacher—check it by the "A-B-C" standards of *More Milk—Better Conditions—More Profit* and you will find it PROVES UP 100% as Mr. Kerr found. Write for free "Schumacher Feeding System" containing a dozen tried and tested dairy rations. Your dealer has Sugared Schumacher, if not write us.

\$495 MONTHLY AFTER TRIAL!

Lime, Legumes, Livestock

High Grade Fertilizers Reduce Overhead

HAVE you got a few tons of lime to use this year, just for an experiment if nothing more? Here is our plan tried out for the past few years, and it has worked well.

We plowed down a good sod in the fall. We never pasture our meadows, so if it is a meadow, so much the better. In the spring as soon as possible we pulverized the land well, not just go over it the quickest way for if we have crops we must have a good seed bed. We harrowed, lapping the half, lengthwise, then across the same way, filling the dead furrows up even. Then the spring tooth harrow followed lapping half. If this isn't enough, go over it again, or at least the places where it needs it.

The land was then sowed to corn with a drill and about fifty pounds of commercial fertilizer to the acre sowed with the drill at the same time. The ground was then rolled. In a few days it was dragged crosswise with a smoothing harrow, and again in a few days lengthwise. This keeps down all weeds before the corn is up. After it began to come up, we kept right on with the drag until the corn is large enough to cultivate. Do not stop cultivating as long as you can get through with a cultivator, hitch on to the one horse cultivator. If it doesn't rain, do all the more cultivating. Too many people get discouraged when no rain comes and stop working in corn and then have a failure. That is just the time to work more to make up for the lack of rain.

Fall Plowing Speeds Spring Work

When fall came, the silo was filled. Then we plowed this land and made sure to ditch it well. When you are plowing don't wait until spring, for you want to get on to the land earlier this year for you are going to seed it down, and want the advantage of early rains, and the oats will not hurt. We had a piece a few years ago that got two inches of snow on it after it was up, and they were ripe in July. Some who read this plowed last fall so they may follow from here on.

During a winter we put a thin coat of manure (here is where your live stock comes in) over this ground. We used the manure from the stable each day, using plenty of straw for the bedding to absorb in the gutters in the stable. After this ground had been pulverized over once, we sowed a ton of lime to the acre. More is better. Then it was worked the same as for corn. Be sure you have a good seed bed.

Buy Good Clover Seed

Now sow with the best grade seeds you can buy, and use a good rich mixture of timothy and mamouth red clover (here is your legume.) Do not stop because clover costs money. It will pay. After you are through sowing go over with a smoothing harrow so that every little seed is covered and wait results.

As soon as the grain is ready, cut it. Get it off this new seeding as soon as it is dry and by all means don't let any stock run over it or eat it off. The next year you should get a big yield of clover and the following year one of timothy. We had a four acre lot planted to corn in 1921, and got a bumper crop. In 1922 we cut fourteen big loads of clover; and in 1923, eleven loads of timothy, ten loads of which pressed out nearly ten tons of hay pressed in March, 1924. Last year was not a very good hay year, and with the same rotation we had fourteen loads of clover on five acres and expect a good timothy crop this year.

Acid Rock a Big Help

Last year we tried acid rock with lime in oats, seeding without manure as we didn't have enough manure. The oats yielded a big crop and had especially

strong straw to hold up the heavy heads, which did not go down with the wind.

The seeding looked good last fall, but it remains to be seen what the results will be this year. We have always done our work with horse power. I always drove a team with my husband, and we had two sets of horse drawn equipment. Last fall we bought a Fordson, but our work will be done on the same plan. When it is too wet for the tractor, the horses will be used, and for the sowing and where it is most satisfactory.—Mrs. C. J. Doxater, New York.

High Grade Fertilizers Reduce Handling and Freight Costs

FARMERS in AMERICAN AGRICULTURIST territory this year will spend hundreds and thousands of dollars for fertilizers. In times like the present when the farmer has got to make a dollar go a long way, he has got to cut every corner to reduce his overhead, still keeping quality in his fertilizer. It is poor economy to buy cheap fertilizer. Professor A. W. Blair, soil expert of the New Jersey Agricultural Experiment Station, comes out very strongly for high grade fertilizers. His main argument in his favor is the fact that they reduce the cost of handling and of freight and increase to the maximum the money that goes into actual plant food. Mr. Blair's comments are as follows:

"At a time like this when the odds seem against the farmers in so many ways it is well worth while for him to consider carefully his investment in fertilizers in order that the money may be wisely spent. Will this money buy the most plant-food possible, or will it go for just 'fertilizers'?"

"Ten tons of a 5-8-6 mixture will carry 3800 pounds of plant-food, but the freight and handling charges on the latter will be just as much as on the former, which carries 1000 pounds more of plant-food.

"There are truckers and potato growers who could afford to use a still higher-grade fertilizer, a 6-8-7 for example. Ten tons of this will give 4200 pounds of plant-food as against 2800 in ten tons of a 3-8-3.

"But why confine the high-grade fertilizer to truck and potatoes? For corn 250 pounds of the 6-8-7 would be quite as effective as 500 pounds of the 3-8-3, and from the standpoint of freight and handling, much more economical."

New York County Club Agents Commend A. A. Scholarship

FOR the past three years AMERICAN AGRICULTURIST has been giving a scholarship in New York State to the Junior Project worker who is outstanding in his particular project. The scholarship is given not only as a reward for the achievement of the individual but as an indication of the hearty endorsement of AMERICAN AGRICULTURIST to the Junior Project work being done among the boys and girls of our farms. Recently county club agents held a conference and during that conference the following resolution was passed:

Whereas, the County Club Agents of the State of New York in conference assembled, realizing the impetus given Junior Project Work through the kindness of the American Agriculturist in contributing a scholarship for an outstanding member, in the State, be it hereby

Resolved, that the head officer of our State organization be delegated to convey the most sincere thanks and appreciation of this organization for the American Agriculturist's support in the past and request their continued interest in the future.

American Agriculturist, February 21, 1925
**New York State Grange Initiates
 570; Passes Important
 Resolutions**

SARATOGA Springs was the meeting place for the fifty-second annual session of the New York State Grange, held February 4-7. Although this famous summer resort was covered with a snow blanket of three feet, fine weather prevailed throughout the session. the re-election of Edson J. Walrath of Jefferson County as member of the executive committee.

No election was held this year, except executive committee.

There were about 700 delegates in attendance and a class of 570 was given the included Past State Master C. M. Gardner of Massachusetts, State Master O. L. Martin of Vermont, State Master Philip H. Dewey of Pennsylvania, Past National Master S. J. Lowell of Fredonia, N. Y., Berne A. Pyrke of Albany, State Commissioner of Farms and Markets, and Lieutenant Gov. Lowman.

First Meeting in Eastern Part of State Since 1911

State Master S. L. Strivings presided and many important questions came before the body. This is the first session of the State Grange held in Eastern New York since 1911, when the Grange met at Troy. Seven invitations have been received for the 1926 session: Rochester, Niagara Falls, Buffalo, Jamestown, New York City, Watertown and Malone. The choice will be made by the executive committee early in June.

The Grange sessions at Saratoga were held in Convention Hall, with a capacity of 5,000 people. The public reception Wednesday evening was held in the Casino, another large public auditorium. About 1500 Grangers were present at the degree work of Flora's court Thursday evening. Mrs. Florence Aucher of Monroe County, the State Grange Flora, presided and Raymond Mitchings of Onondaga County had charge of the floor drills. Never before has the beautiful work of the sixth degree been more impressively put on.

**Chautauqua County Leads in
 Membership**

The present membership of the Grange is 135,420, with 897 Granges. Secretary F. J. Riley's annual report show a net loss of state membership of 2,246. Chautauqua is the leading Grange county with 8,738 members, followed by Jefferson with 8,014, and Oswego with 6,368. Seven new Granges have been organized during the year.

Among the veteran members in attendance were Jennie B. Stone of Oswego County, 83 years old, who has attended 47 successive sessions; Jacob Shaffer of Monroe County, also 83, who is master of Monroe County Pomona and headed his county delegation; and Fred E. Rounds of Oswego County, who has attended 32 sessions. Past State Master S. J. Lowell has attended 22 successive sessions.

State Master Strivings reports 512 Grange halls in the State, valued at over \$2,000,000.

Many Juvenile Granges Organized

During the session the state association of county deputies held their annual meeting and elected the following officers; President, L. C. Archer of Lewis County; Vice-President, Duane Waldron of Wayne County; and Secretary, John S. Bardwell of Allegany County.

Miss Natalie Barns, State Deputy of Juvenile Grange work, reported 952 members in that department, with 35 Juvenile Granges, located in 19 counties. Twelve new Juvenile Granges have been organized during the year, and two re-organized. In addition, three new Granges have been re-organized since January 1st.

The Grange voiced approval to a resolution to change the age limits of Juvenile members from 5 to 14 as now to 6 to 16

Feed the Fields

DON'T waste manure by dumping it on your fields or scattering it in large clods. Distribute it evenly over the surface of the ground in fine particles. Otherwise you will not get maximum results from this wonderful fertilizer. Every farmer knows that manure when properly applied is the best food for restoring and increasing the productivity of the soil. Why not feed your fields by using a good manure spreader? Big profits result from the use of

The NEW BLACK HAWK Spreader

It does a perfect job of distribution. It thoroughly pulverizes the manure and spreads it as widely and evenly as laying down a carpet and can be used for top dressing so the crop will have full benefit of the fertilizer and not be injured by heavy clods.

The New Black Hawk Manure Spreader 40-A is the lightest draft, least complicated and simplest to operate of any machine of its kind. A two-horse spreader. It has a strong and positive feed; does not choke; free from cog gears; great quantity range; works equally well on hillsides and level ground; a manure spreader of Superior quality. Write for full details.

Farmers' Favorite Grain Drills

All Farmers' Favorite planting machines are **precision tools**. All are designed for **utmost accuracy in planting**. To deposit a given quantity of seed **uniformly**—into **every** hill or row—at a **measured depth**—and to cover every seed perfectly—these are the features you can rely on to the limit when you select any planting implement carrying the Farmers' Favorite name.

You are assured of absolute uniformity when you buy the Farmers' Favorite Grain Drill—the world's standard for more than fifty years!

Farmers' Favorite Lime Sower

For perfect spreading of Lime there is no better machine built than the **Farmers' Favorite Lime Sower**. Built low for easy loading. No cogs or gears to break or get out of order. Smooth, steady feed. Adjustable for spreading 300 to 6,000 pounds per acre. Sows damp lime as well as dry, without clogging. Handles all kinds of commercial fertilizer. Has a 10 bushel hopper capacity and can be used back of team or tractor. Sturdily made to withstand years of hard service. Mail coupon or write for details.

years.

Important Resolutions Adopted

Among the more important measures in which the Grange took action were: asking legislation to make compulsory the reading of the Bible in public schools; favoring State legislation to bring about enforcement of the Volstead Act; favoring a two-cent gasoline tax and a flat \$3.00 tax rate on motor vehicles; favoring reduction of age limit for drivers of automobiles to 16 years; opposing the Child Labor constitutional amendment; favoring more equitable system of levying school

taxes; opposing advertising of oleo in State Fair grounds; imposition of higher tariff on imports of dairy products; ratifying amendment to bylaws of Grange for increase of 12 cents per year in Grange dues of subordinate members; increasing per capita tax of subordinate Granges to State Grange to 8 cents per quarter from 7 cents as now; endorsement of M. C. Burritt for member of Board of Regents; leaving to vote of taxpayers of district schools the question of consolidation of districts; favoring increase of appropriations at State Fair for Grange ex-

hibits; favoring making open season for bear and deer November 1 to 30; favoring increase of compensation for postal employees; extending invitation to National Grange to meet in New York in 1926; asking executive committee to contribute \$1,000 to revolving scholarship fund of State Grange when other contributions reach \$1,000.

Some life preservers are in the shape of automobile tires; but a commoner type is a sensible overshoe for sloppy weather.

A New Service to the Dairyman

to help him to more economical production of milk by better feeding methods.

Our Ration Service Department has made a study of feeding grain to cows under various farming conditions. There is one *right* ration for you to feed; and we can tell you what that ration is if you will tell us about your feeding methods by filling in the blanks below:

1. What kind of hay do you feed?
2. Have you corn silage?
3. Do you feed home grown oats or other grain grown on your farm?
4. How many times a day do you feed?
5. Has your dealer a mixer?
6. What breed are your cows?
7. How many lbs. milk do they average daily?
8. What grain ration are you feeding now?

.....
 9. Your name and address

On receipt of this ad, with the blanks filled in, we are going to send you the makeup of a ration that will be easy to mix, safe, palatable, economical, and fitted to YOUR method of dairying.

IT WILL MEAN DOLLARS TO YOU.

Mail your answers to:

A Cow is as good as her Udder

NO matter how good the general scaling points of a cow, the udder and teats will always be the key to her profit-making value. It pays to watch carefully these delicate tissues and keep them free of the slightest disorder.

Let Bag Balm be the guardian of the "profit-zone" of your cows. This great healing ointment gives quick results in clearing up chapped or cracked teats, cuts, bruises, inflammation, bunches, Caked Bag—or any abnormal condition of udder or teats.

Keep Bag Balm on hand the year round. It will prove the best investment you ever made. Big 10 ounce package, 60c—at general stores, feed dealers, druggists. Order direct if dealer is not supplied.

New York's TB Progress

The Empire State Now Leading The Nation

A TOTAL of 10,704 accredited herds, T.B. tested, marks the opening of the new year in the New York State

By C. P. NORGORD
 Assistant Commissioner, New
 York State Department of
 Farms and Markets

5. Additions to herds from tested herds only.

6. Milk or whey from outside the farm pasteurized.

7. Keeping within allocated funds.

High Salvage to Farmers Decreases State Cost Without Lowering Farmers' Receipts

T.B. Campaign, according to the annual report of the Department of Farms and Markets just off the press. This is an increase of 6,714 accredited herds above the 4,000 herds a year ago. It places New York at the head of all States in the Nation, her nearest competitor being Indiana with 8,500 accredited herds.

Under the supervision of the State and Federal Departments, are a total of 40,770 herds, containing 586,760 cattle. One-fourth of the herds of the State are tested. There were tested during the year 17,021 herds.

Satisfactory Progress in Area Testing

Practically all of this testing has been done by township areas. That means taking all of the herds consecutively, farm following neighboring farm, until all in a township or county have been tested. By this method the work is done most economically and reinfection from adjoining untested herds does not take place, and the herds can be kept T.B. free.

At the close of the year, 213 townships had been tested one or more times, an increase of 90 townships during the year.

Five counties have become entire tested areas. These are: Steuben, Essex, Cattaraugus, Greene and Allegany. One County, Essex, has become modified or accredited. This means that the per cent of T.B. has been reduced to below 1/2 of one per cent. Steuben is practically in that class also.

According to Commissioner Berne A. Pyrke, the work is in the most healthy and constructive condition of any time since the beginning of the campaign.

Department Policies Well Carried Out

The cardinal points of the State and Federal T.B. eradication policies have been carried out in each county with a satisfactory degree of accuracy. The outstanding points of this policy are:

1. Combination tests, the intradermal and subcutaneous checked by the ophthalmic.
2. Retests of all infected herds within 60 to 90 days.
3. All reactors promptly appraised, removed and salvaged.
4. Premises promptly and thoroughly disinfected, under veterinary supervision. No indemnity payments without this.

In the early part of the year, Commissioner Berne A. Pyrke appointed nine additional appraisers, making a total of seventeen. These were assigned districts, thus each is continually in his own territory, advantageously located and familiar with cattle values. As a consequence, the salvage obtained for the animals was increased from an average of \$14.50 in 1921 to \$19.00 in 1924. The increase of the salvage decreases the amount of indemnity paid by the State without decreasing the total amount received by the owner. Due to this, the average indemnity per animal paid by the State has decreased from \$76.26 in 1923 to \$50.88 in 1924, a decrease of \$25.38 per head.

On the 50,000 reactors for the year, the State thus saved \$269,000 indemnity, and the farmers saved \$225,000 in salvage that otherwise would have been taken by the dealers in the main.

Indemnity Expenditures Kept Within Appropriation

At the beginning of the year, Commissioner Berne A. Pyrke, of the Department of Farms and Markets, allocated the \$2,500,000 indemnity funds to each of the 39 organized counties. This was on the basis of the cattle population, no county receiving more than \$100,000 nor less than \$30,000.

As a consequence of this check and limit enforced in each county, the funds can be made to last throughout the year.

More Funds Needed For Indemnity

As a consequence of the limited funds, several counties have had to proceed at slow speed and several were limited to retesting after the middle of the year. This inability to employ the county veterinarian at maximum speeds, is detrimental progress and causes dissatisfaction among the people.

To keep all the counties going at a reasonable speed and each county continuously employed without interruption, Commissioner Pyrke and Mr. H. J. Henry, Director of the Bureau of Animal Industry of the Department, estimate that \$4,000,000 indemnity for the coming year will be necessary.

While the amount of indemnity needed

per year is on the increase, the peak and turning point will be reached within a few years as counties are cleaned up and completed. That is illustrated in the decrease of indemnity in Essex and Steuben County as they have neared completion. The former dropped from \$31,680 indemnity per year in 1922 to \$1,656 in 1924. The latter decreased its indemnity needs from \$92,400 in 1922 to \$2,704 in 1924.

**Extremes are Cleaning Up Faster Than
the Center of the State**

On account of the lower per cent of tuberculosis in the northern and western part of the State, the same allocated amount of indemnity funds used there is cleaning up these extremes of the State faster than the center. Hence, within a few years these areas will be nearly cleaned up. This is advantageous to the campaign in furnishing clean cattle for replacement in the highly infected central areas.

**United Action in Counties Assures
Progress**

Thirty-nine counties are now organized and others are soon to follow. A county veterinarian is actively engaged in each county, backed by a special tuberculosis committee, the County Board of Supervisors furnishing money for expenses, the County Agent and the Farm Bureau, all cooperating with the Department of Farms and Markets and the Federal Bureau of Animal Industry and their veterinarians and supervisors. In the united attack on this far flung battle line, practically the entire State is benefitting by the campaign simultaneously. This statewide beneficial effect of the campaign stimulating these organized county agencies and every producer and consumer of dairy products is an exceedingly strong factor in the New York State Tuberculosis Campaign.

Cause and Treatment of Garget

Will you please tell me if garget is contagious among cows? What causes garget? I have been told it was their feed. I have been feeding some I have had two cows that had garget within two weeks of each other. The first cow had just freshened, and it developed quite slowly. The second cow had been milking for six weeks, and it came on bad in less than a day. I did not notice it when milking in the morning, and at night a quarter of her udder was swollen hard and was very painful. How long does it take a cow to show signs of it? Is there any preventative? Can a dry cow have it?—R. S. P., Oneida County, N. Y.

GARGET or Downfall of the Udder, is an inflammation of the mammary glands, it frequently appears in the cow as might have been expected, from the fact that this animal is used as a milk producing machine and has its Laciferous apparatus very largely developed.

This disease is of the highest importance as affecting the yield of milk rather than the life of the animal.

It may be acute or chronic and most frequently is seen in young cattle, especially those with first calf.

It may be caused from exposure to cold when heated, injuries of various kinds, obstructions to the flow of milk, and other specific disorders.

Treatment consists of a cathartic dose and the animal allowed nitre in the drinking water, aconite will counteract the sympathetic excitement.

The local treatment consists of removal of all milk at regular intervals, either by milking or the use of the teat syphon, or by allowing the calf free access, next foment freely with hot water, afterwards apply poultice containing Belladonna to the whole gland, supporting it and the weight of the organ, by a wide bandage passed over the loins.

In 300 days Vandemark Maid 5th, an Ayrshire, bred and owned by L. G. Tucker, Scio, New York, gave 12,507 pounds of 4.06% milk, 507.31 pounds of butterfat, carrying a living calf 193 days of this period. This production ranks her as the tenth highest mature Roll of Honor Ayrshire in New York State.

**The butter-fat you leave in the skim-
milk won't buy the baby any shoes**

The loss of only 25 cents' worth of butter-fat a day costs you \$91.25 a year—enough to keep the whole family well shod, and then some. Thousands of farmers have stopped the waste of much more butter-fat than that by replacing their cream-wasting separators with new, clean-skimming De Laval.

Never in the history of centrifugal cream separators has there been a machine to equal the new De Laval—for clean skimming, easy turning or durability. It has the wonderful new self-centering bowl which runs smoother and easier, and eliminates vibration. It will give you more and a richer cream than you have ever gotten before.

New De Laval sold on easy terms ranging from

New York Farm News

Schuyler County Takes Lead in Dairy Work

SCHUYLER County has two of the ten high herds in butterfat in New York state, according to the latest report of the central office of the state dairy improvement associations. Hermann and Couch of Schuyler County have the honor of heading the list, with a herd average of 41.7 pounds of butterfat.

Essex County likewise has two herds on the honor roll in this report, placing second and fourth. W. W. Fortune of Essex, whose herd is always well up in the lead, was second with 41.3 pounds. F. E. Williams of Madison County was third with a herd averaging 38.9 pounds while H. N. Robb owned the Essex county herd that placed fourth with a record of 38.1 pounds.

The other Schuyler county herd in the high ten was the property of William Fowler, and they captured fifth position on an average of 37.3 pounds. J. B. Somerville of Seneca county made sixth place with his herd, which averaged 36.1 pounds of fat for the month.

Oneida Has Largest Herd

Two herds were put in the running also by Tompkins county, and the first of them, which took seventh honors, was owned by Harold Hanford, and had a record of 35.8 pounds. Oneida county was represented this month in eighth place by F. H. Thomson and Son, who also had the distinction of having the largest herd to enter into the competition for the high ten. Their string of 29 was but one tenth of a pound behind Hanford's bunch.

Harold Tripp owned the other Tompkins county herd, which placed at 35.4 pounds. The 35.1 pound herd of Albert Baker of Saratoga county concluded the list. Averages on these herds are figured only for the cows that are in milk.

"Farm Machinery Week"— March 16-21

THE week of March 16 has been fixed by Commissioner Berne A. Pyrke of the Department of Farms and Markets as "Farm Machinery Repair Week". During this week farmers are urged to brighten up and place in the best of repair their farm machinery and equipment.

This campaign is to be carried on in cooperation with the State College of Agriculture, the State Department of Education, the State Grange and other agricultural organization. The New York State Implement Dealers' Association listened to an outline of the plan at the annual meeting in Syracuse and has announced that it will assist by providing special service on repair parts ordered during the week of March 16. Dealers generally will work with the Department and other agencies to bring about results.

It is the desire of the Department to make impressive the value of repair and care of farming implements, and it is urged that before March 16 farmers discuss with dealers plans for repairs, after looking over the machinery.

Paint And Replace

The Department and organizations associated with it in the campaign are urging that woodwork be painted, worn or broken castings be replaced by new

ones and that farm machinery be placed in such condition that it will be ready for use when the busy season opens in the spring.

Commissioner Pyrke, in a statement has urged farmers to cooperate in order that beneficial results may be accomplished.

"Farm Machinery Repair Week" is under the supervision of Charles H. Baldwin, Director of the Bureau of State Institution Farms.

Chautauqua County Grape Grower Solves Post Problem

ALTHOUGH he doesn't reveal the individual's name, Professor J. A. Cope, forester of the New York State College of Agriculture, makes the statement that a grape grower of Chautauqua County has solved the post problem through the use of black locust. Grape growers especially are heavy users of posts, the individual in Professor Cope's report using hundreds of posts every year.

Through the rapid disappearance of chestnut in this country, because of the blight, the fence post problem has become most serious. In hitting upon black locust as a substitute, it was found that suitable posts could be grown in 15 years and furthermore that these posts possess a 50 per cent greater lasting power than chestnut posts. Where chestnut customarily lasts 10 years after being set, black locust is good for 15. On top of that another crop of posts may be harvested from black locust sprouts in 10 years.

Overcomes Borer on Right Soil

As the black locust is really a legume, it grows best on an alkaline soil. As a matter of fact it is quite necessary to restrict plantings to such soil in order to make headway against the deadly locust borer. Professor Cope states that on a recent trip to Chautauqua County all of the voluntary stands of locust which he examined showed evidences of attack by the locust borer. However, on the better lands where the soil was sweet the rapid growth of the locust was sufficient to overcome the work of the borer.

Professor Cope goes on to say that planting the locust with pine helps to protect it against the borer. It is said that the beetles, the adult stage of the borer, like to fly around in the sunshine and if the trunks of the locust can be kept in the shade, the beetles are not so likely to lay their eggs on them. Young white pine is said to be ideal to furnish the shade and in addition would prevent the locust trees from developing too many side branches which are not desirable in post material. It seems that such a mixed planting merits a trial.

New York County Notes

Steuben County—Business of all kinds has been at a standstill. The heavy snow storm of January 29th and 30 blocked the roads completely. About three feet of snow fell inside of 24 hours, followed by a strong wind which piled snow to great heights. Potatoes, our main crop, have been advancing lately. On February 4th dealers were giving 65c a bushel. Veal calves 14c light weight. Some of our best farmers are letting their farms to engage in more profitable occupation.—C. H. E.

Broome County—Breaking roads is the most important of conversation. For the first time in five years we were unable to haul loads over our roads. Our county is making a strong effort to do away with sheep killing dogs. During the past year many sheep were killed in our county. Grain prices keep mounting with butter, milk and eggs at comparatively low prices. Butter is bringing 45c at the store, eggs 40c. Hay is bringing \$10 on the farm.—Mrs. E. M. C.

Oneida County—The thermometer

American Agriculturist, February 21, 1925

went as low as 36 degrees below zero during the last week in January. On the 29th we got a terrifically heavy snow fall that demoralized traffic. Mail and milk rigs were unable to make their schedule trips. The Karlin Cheese Company paid farmers \$2 a hundred for November and December milk. Eggs have been bringing as much as 75c a dozen. Potatoes are moving slowly into local trade at 75 to 90c a bushel. There was considerable dry rot as well as soft rot in storage. Many auction sales are being held, cows bringing from \$20 to around \$60, the higher price for fresh cow or those due to freshen. Light pork has been bringing 15c a pound dressed. Dressed beef has been bringing from 8 to 12c per pound according to quality.—E. M. A.

Ontario County—We have been having lots of snow, a real old-fashioned winter. Shoveling snow and breaking roads are the main jobs of the day. Grain is way up. Seed clover and all kinds of grass seed is very high. All are hoping for a good year.—H. D. S.

CERTIFIED Fruit Trees

You are fully protected when you plant Barnes' Certified Fruit Trees. Every Tree was personally examined by Dr. J. K. Shaw of the Massachusetts Experiment Station and bears the seal of the Mass. Fruit Growers' Ass'n, certifying it true to name.

Reviewing the Latest Eastern Markets and Prices

MILK PRICES

THE Dairymen's League Cooperative Association announces the following prices that dealers will pay the League during the month of February for milk testing 3% in the basic zone of 201 to 210 miles from New York City. *It is to be understood, of course, that the prices mentioned below are not received by the farmer, but go into the pool. They represent the prices dealers pay to the League.*

Class 1 Fluid milk	\$3.07
Class 2A Fluid Cream	2.20
Class 2B Ice cream	2.25
Class 2C Soft cheese	2.15
Class 3A Evaporated whole milk	
Cond. whole milk	1.90
Class 3B Whole milk powder	1.85
Class 3C Hard cheese other than American	1.65

Class 4 prices will be based on butter and American cheese quotations on the New York market.

Sheffield Producers

The Sheffield Farms Producers announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$3.07
Class 2	2.20
Class 3	1.75

Class 4 prices determined by butter and cheese quotations on the New York market.

Non Pool Cooperative

The Non-Pooling Dairymen's Cooperative announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$2.80
Class 2	2.20
Class 3A	1.80

Oats

Hoffman's Seeds Pay!

"Shadeland Climax" (a "tree" variety) tops all others in popularity and usually in yield. "Improved White Russian" best "side" Oats. "Swedish Select" and two other good varieties. Bright, clean, heavy Seed grown where Oats do best—in the far North. Write for free Samples and Catalog of Farm Seeds.

Exceptional value at \$18,000 part cash. Picture and details pg. 48 big illus. Bargain Catalog. Free. STROUT FARM AGENCY, 150R, Nassau St., New York City.

Class 3B 1.75
Interstate Producers

The New York State Milk Producers Association (Philadelphia Price Plan), announce the receiving station prices or the price to the farmer in the 201 to 210-mile zone from Philadelphia for 3% milk is \$2.19. In the 101 to 110 mile-zone, the price is \$2.29.

League Announces January Pool Prices

The Dairymen's League Cooperative Association announces that the gross pool prices for January is \$2.50 for 3% milk in the 201 to 210 mile zone. From this the association has deducted 8½ cents for expenses leaving a net pool and cash price to the farmers of \$2.41½. There are no deductions on certificates of indebtedness. This net price of \$2.41½ is the highest January price since the organization of the pool.

BUTTER MARKET STILL SHAKY

The butter market is far from being in a sound condition. It is flighty and jumpy. A little pressure one way or the other is responsible for almost immediate price changes. As it is at this writing February 12, the prices are slightly under those of last week. Creamery extras scoring 92 can be bought for 39c now where they were worth 40½c last week at the same time. The reason for this is that fresh receipts have been ample enough to give buyers a chance to trade. The speculators have been holding off for further reductions before taking on stock. At the same time sellers have been too anxious to keep stock moving to offer much opposition to slight price declines which were pressed by the buyers. The market is quite flexible at the present time going up and down quite freely. The trade in general feels quite encouraged taking much satisfaction in the news that storage holdings were reduced almost 700,000 pounds last week. Furthermore the consuming trade is holding up very well, while production is not getting any heavier than last year. Furthermore there is little or no foreign butter coming in. Creamery butter, scoring 93 is being sold as high as 40c, although most business is being done at 39½c with 92 score bringing 39c and 90 to 91 score to 38½c. Lower grades vary from 33½ to 37½c.

CHEESE HOLDS ITS OWN

The cheese market, although it is quiet, continues to hold its firm tone. As a matter of fact, prices are stronger than they were last week. Fancy whole milk State flats are worth 25½c for the prevailing trade price while some go as high as 26c. In fact few pet marks have sold a little higher. This is anywhere from one-half cent to whole cent better than last week. There is no indication that there will be any severe weakening in the near future as receipts are holding uniform, consumption is good, and the market in general is in a firm condition.

EGG PRICES FALL SHARPLY

There is a considerable difference between the market of this week and last. Egg prices have taken a tremendous tumble. The downward movement started last week when Pacific Coast auction indicated lower values. Nearby eggs have surely suffered but it is to be somewhat expected. With increasing receipts as spring approaches we are quite sure to see the market weaken materially.

In view of present quotations and in view of the present situation, we strongly advise shippers in this territory, if it is at all possible, to watch for the American Agriculturist radio market reports in order to follow the egg market from day to day. American Agriculturist radio reports are given in cooperation with the New York State Department of Farms and Markets and the U. S. Department of Agriculture. The reports are broadcast on Tuesday, Thursday and Friday at 12 o'clock and on Wednesday at 12:20 from Station WEAF.

There is a strong possibility that in many communities local egg producers will make more money by selling locally than

by shipping their eggs to New York City.

On February 12, Jersey and other nearby henry whites had to be extremely fine to bring 52c. Only the fanciest packs were able to command this price. Lower grades sold as low as 47 to 49c. Nearby gathered whites are bringing 45 to 49c depending on quality, size and pack. Pullet eggs are worth from 44 to 45c. Brown eggs are almost on a par with white eggs being quoted at 49 to 51c with other grades running as low as 47c. In view of existing conditions there is no telling what will take place in the near future. Receipts are clearing up well, but too many factors are at work to warrant even a wild guess.

POULTRY MARKET BREAKS

It is indeed difficult to follow the poultry markets these days. One day it is up and the next day it is down. Last week the live poultry market was fairly firm, although it was considerably off from the previous week. At any rate, indications were that the market was going to turn much stronger. This materialized for a day and then the market slid back with a continued weakening in price to the point that fowls went as low as 25c on the 10th. There was practically no buying, the market was so well supplied with stock. Everything was in the buyer's favor.

In general the express market slid down on a parity with the freight market. Apparently the low point of the week has passed for as we go to press, fancy fowls, whether leghorn or colored are worth 26c. Few, if any, express chickens are arriving. What chickens are coming and are real fancy are worth 30c. Most arrivals are average run and such are bringing only 26 to 28c. A few spring broilers are being shipped and these worth about 50c. Nearby ducks in general are worth anywhere from 30 to 32c, while geese are bringing 25c. Domestic rabbits are quoted anywhere from 35 to 37c. It is well to watch the radio reports on these commodities because they are changing so rapidly that one day means a whole lot.

POTATO PRICES OFF

The potato market did just what we said it would undoubtedly do. It turned weaker just as soon as the effects of the storm were over. Prices are now back to \$2.15 per 150-pound sack on States. The reason for this price recession is because so many potatoes were offered following the storm that dealers had their own way about making prices. On top of that a number of the arrivals from up state contained potatoes of very poor quality due to rot and freezing. When these are put along side the fancy potatoes that Maine growers are sending in, it is pretty hard to get much of anything for them.

BEAN MARKET STEADY

Although there is little activity in the bean market, nevertheless the tone continues steady. Peas are about the same as last week at \$7.25 for choice marks, \$7 representing the value on average run. Red kidneys are worth anywhere from \$10.25 to \$10.75 while White kidneys hold about the same price around \$9.50. Harrows, too, are holding their own at \$9 to \$10.25. New York has been having some real spring like weather during the week ending February 14th and this was not conducive to consumption of bean soup.

WHEAT PRICES OFF

The outstanding feature in the grain market during the past week was the rather precipitous drop in the price of wheat. The Chicago prices on wheat for May delivery showed a decline of 23c from the season's top. Corn and oats also weakened in sympathy with the break in wheat. This of course, is in wheat futures.

Cash Grain Prices

Cash grain prices have not suffered as much as futures. Cash prices in New York City F.O.B., are as follows: WHEAT, No. 2 hard winter, \$1.95½; No. 2 red, \$2.04¼; No. 2 mixed durum, \$1.97½. CORN, No. 2 yellow, \$1.42; No. 2 mixed, \$1.41¼. OATS, Fancy

white clipped, 69 to 71c; ordinary white clipped, 65 to 67c; No. 2, 65c. RYE, \$1.65¾.

The Local Buffalo Market

Buffalo prices are announced as follows by the New York State Department of Farms and Markets as of February 7th: No. 2 white oats, 63½c; No. 3 white oats, 62½c; ground oats, \$43.25 a ton; spring wheat bran \$30 per ton; wheat bran \$34; standard middlings \$34; soft wheat middlings \$40; flour middlings \$40; red dog flour \$43; white hominy \$48.50; yellow hominy \$48; corn meal \$48.50; gluten feed \$39.65; gluten meal \$49.75; 35% cottonseed meal \$40; 41% cottonseed meal \$43; 43% cottonseed meal \$45; 34% old process oil meal \$45.

HAY MARKET HIGHER

Owing to the fact that receipts have not been quite as heavy during the past few days, the hay market took an upward turn with the result that No. 1 timothy is worth as much as \$28 in large bales, while the top figure for No. 2 is \$26. The demand is good on these top grades. At the best however, the market can only be said to be fairly steady for a few additional cars may cause an easier tone. Second cutting alfalfa is worth from \$30 to \$31. for No. 1 and \$25 to \$26 for No. 2. These prices are delivered in New York City.

Color Your Butter

"Dandelion Butter Color" Gives That Golden June Shade which Brings Top Prices

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade. "Dandelion Butter Color" is purely vegetable, harmless, and meets all State and

National food laws. Used for 50 years by all large creameries. Doesn't color butter-milk. Tasteless. Large bottles cost only 35 cents at drug or grocery stores. Write for free sample bottle.

New Jersey Farm News

Cooperative Conference Held in Trenton

THE Sixth Annual Conference on Cooperation in New Jersey was held on February 10 and 11 in Trenton under the auspices of the New Jersey State Department of Agriculture. The purpose of the conference was not to evolve any definite program. It was called more to verify in the minds of the officials and directors of various cooperative groups whether or not they are headed in the right direction in their cooperative efforts and principles.

On Tuesday, Dr. E. G. Nourse of the American Institute of Economists led the discussion by reading a most excellent paper on the possibilities and limitations of cooperation.

Tuesday evening, Mr. C. L. Christensen of the Federal Bureau of Agricultural Economists, held the close attention of the conference with a most interesting illustrated talk on "How Danish Farmers Farm and Cooperate."

Wednesday morning "Merchandising Methods" was the chief topic of discussion. The principal speakers were J. A. Coulter of the Dairymen's League, Mr. M. Sondergaard of the Minnesota Cooperative Dairy Association and Mr. T. E. Baum, who is chief purchasing agent of the Atlantic and Pacific stores. H. E. Babcock led the discussion on "The Field for Cooperative Purchasing Associations."

On Wednesday evening, M. C. Burritt of Hilton, Monroe County, N. Y., led the discussion on the educational background essential for the operation of cooperative associations. Mr. F. B. Bomberger of Maryland State was also called upon in this discussion.

Conferences of this kind are most important in the development of farmers' cooperative societies and the New Jersey State Department of Agriculture is to be congratulated upon its excellent work in bringing the representatives of the various cooperatives together in the manner in which it has. Much credit for the excellent organization of the conference is due to Mr. A. L. Clark, Chief of the Bureau of Markets.

The conference was not solely for men prominent in various cooperatives in other states. It had its local benefits for a number of Jersey farmers were present who are officered of or interested in New Jersey Cooperative Associations.

Additional Sidelights on Farmers' Week at Harrisburg

OLIVER D. SCHOCK

THERE were eighteen farmer organizations represented at Annual Farmers' Week at Harrisburg, from the State Council of Agricultural Association to the Vocational Boy's meeting.

The electric farm was a big feature. It was really an ultra-modern farm. The electric power exhibit was staged through the cooperation of the Giant Power Survey, the Pennsylvania Department of Agriculture, the Pennsylvania College, the Pennsylvania State Grange and the Pennsylvania Electric Association. It was a wonderful display and attracted a large crowd.

Seed dealers and farmers got together during the week and discussed the seed situation, particularly for the purpose of developing a better working plan under the seed law.

Announcement of the tobacco awards were made as follows: Lock Haven growers took eight of the honor places out of the thirty. The awards follow:

Seedleaf Wrapper—First, J. H. Hostetter, Millersville; second, James B. Adair, Lancaster, No. 1; third, S. N. Root, Landisville.

Seedleaf Binder—First, Allen R. Hoffer, Manheim, No. 1; second, J. B. Brubaker, Mount Joy; third, J. U. Hostetter, Millersville.

Seedleaf Filler—First, J. E. Hockenberry, Elizabethtown; second, C. S. New-

comer, Mount Joy; third, J. E. Garber, Mount Joy.

Havana Wrappers—First R. T. Miller, Lock Haven; second Hayes Dorey, Lock Haven; third, Benjamin M. Baird, Lock Haven.

Havana Binders—First, S. C. Ramm, Lock Haven; second, David Baird, Lock Haven; third, Benjamin Meeker, Tioga.

Havana Filler—First, Benjamin M. Baird, Lock Haven; second, David Baird, Lock Haven; third, William Ramm, Lock Haven.

Best county or association collective exhibit of honey, wax and honey products went to Cumberland County Beekeepers Association, P. M. Beam, secretary-treasurer, Carlisle; second, Lycoming County Beekeepers Association, P. A. McGowan, secretary-treasurer, Williamsport; third, Allegheny County Beekeepers Association, A. T. Keil, secretary-treasurer, Mars.

Officers elected by the Wool Growers' Association were: R. L. Munce, Washington county, president, and W. B. Connell, sheep extension specialist, Pennsylvania State College, secretary.

Organization of the Pennsylvania Jersey Cattle Club was perfected by the Jersey breeders. Officers elected were: W. F. Schrum, Jeannette, president; Harry Hayward, Devon, first vice-president, and C. A. Fox, Pocopson, secretary-treasurer.

A meeting of the Horticultural Association was termed the "Apple Scab Session" and the entire time was devoted to that subject. The necessity for constant spraying was emphasized again and again but the various speakers pointed out that it must be done at exactly the right time if the full value of the work is to be realized.

Sharp differences of opinion arose among the members in regards to spraying and dusting. The latter method has proven successful at the State College Experiment stations but a number of speakers who made informal talks said they had found it unsatisfactory in their regions.

Poland China breeders have formed a State organization, electing the following officers: President, C. A. Stark, Vanderbilt; vice-president, R. E. Bowersox, McClure; secretary, C. Lee Rumberger, Uniontown, and treasurer, D. H. Stucklin, Mifflinburg. An additional man elected to make a board of five directors counting the four officers, was Charles Sheffer, York.

The Chester White Breeders' Association elected R. L. Munce, Cannonsburg, president, and secretary-treasurer, M. E. Knouse, Biglerville.

Officers elected at the annual meeting of the Pennsylvania Berkshire Breeders' Association are: President, Mrs. E. R. Fritsche, Merion; vice-president, W. F. Rischel, Center Hall; secretary-treasurer, S. P. Winslow, Brookville, and directors, Dr. E. S. Deubler, Hanover; H. C. Brinton, Hanover, and George A. Neff, Doylestown. The Berkshire breeders, who won fame this year for winning high honors at the International Livestock Show at Chicago, decided at their meeting to exhibit a carload of Berkshire swine at the International Show again this coming fall. It was also decided to continue the ton-litter work.

The Pennsylvania Duroc Jersey Breeders' Association elected Frank McCrea, Blairsville, president; A. S. Frommeyer, Chambersburg, vice-president; H. G. Niesley, State College, secretary, and W. H. Mertz, Northumberland, treasurer.

One of the important developments at the meeting of the Pennsylvania Breeders' and Dairymen's Association was the action of the dairymen which resulted in the formation of a separate organization, the Pennsylvania Dairymen's Association. The temporary officers elected were A. A. Borland, State College, president, and Robert Brinton, Chester county, secretary.

We supply breeders and pay \$25 to \$50 for each puppy you raise. Send \$1 for dog manual, contracts. **FISHER BROS, 241 Rusk Ave., Milwaukee, Wis.**

What Readers Want to Know

Questions About Crops and Livestock

I've been told my hogs need a mineral mixture. How is this made up?

FOLKS have different opinions about mineral mixtures. Some believe that wood ashes are sufficient while others are satisfied with a box of ground limestone. Other breeders mix ashes, ground limestone, and a little sulphur and copperas. We think this is the best plan. The mineral mixture should contain the foregoing, a little acid phosphate to supply phosphorus and salt. Ten ed is usually mixed up with the exception of each of the ingredients mentioned of salt where only one part is used.

Potatoes as a Sheep Feed

Will you please tell me if potatoes are good to feed to sheep. Are they good to feed to ewes that are about to lamb?

B. B., Maryland.

We referred this question to Mark J. Smith, who is so well known to the readers of AMERICAN AGRICULTURIST as the sheep man. Mr. Smith says that potatoes are considered a source of succulence for sheep of secondary value compared with the regular root crops used in stock feeding. Succulence for sheep that are on a dry feed is very desirable.

Potatoes cut up and fed help out to a considerable extent. However, when they are fed in too large quantities they will cause scouring. Therefore some judgment on the part of the feeder will be required. This applies to in-lamb ewes as well as other sheep.

Test Your Seed Corn

During the past winter I have read a great deal about soft corn. I am getting a little worried about my seed. I have it stored over the wagon house.—R. O. W., New York.

If you are worried about your seed corn the only thing for you to do is to test it. Under separate cover we are sending you a bulletin, additional copies of which can be procured from the New York State College of Agriculture, on how to test corn by the rag doll method. This method is as simple as anything can be. It is the wise farmer who is going to test his seed corn. Last fall corn did not mature well and a lot of it was still soft.

Seed corn that has too much moisture in it and is exposed to freezing and thawing is too risky seed to depend upon. There is no danger in getting seed corn to dry to grow. The great danger with seed corn is too much moisture. When corn is thoroughly dry there is no danger of low temperatures injuring it.

In testing your seed do not be satisfied with testing one or two ears in a bushel; test every ear.

Getting Rid of Wireworms

We have been reading the American Agriculturist for some time and would like to know if there is anything we can do to rid our farm of wire worms? Is there any chemical which will destroy them?

—J. P., New York.

CAREFUL experiments have shown that substances like ashes, kainit, and salt applied to the soil in quantities that will not injure the ground for the production of crops have no appreciable effect on wireworms. Neither has any substance yet been found with which seed may be treated and protected from the wireworms with any degree of efficiency.

On small areas, such as the home gardens, it may pay to set baits for the wireworms. To obtain the best results with baits the land should be kept from weed growth in the autumn and the baits should be applied in the early spring, latter part of April or first

of May. The mid-summer use of bait is usually not successful.

Pieces of potatoes cut on one surface are attractive. They should be buried in the soil three or four inches deep at intervals of about ten feet apart throughout the field. A piece of wire stuck in each potato and allowed to project above the soil two inches, will serve to show where each bait is, especially if the end of the projecting wire is painted white. In about one week the baits should be removed and dropped in boiling water in order to kill the wireworms. The same pieces of fresh pieces of potatoes may be set again and again removed in about a week. Further baiting during the season is probably useless.

Wheat shorts or rice bran are also used as baits. The cereal is roasted brown in pans over a fire. When sufficiently browned the bran is moistened and made into small balls. These balls are then buried in rows about ten feet apart each way in holes made with a hoe. They are left for about a week when they should be examined and the wireworms removed and killed. They may be reset for a second time.

Crop Rotation Most Effective

In the case of crops grown on a large scale such as potatoes, wheat, and corn, some crop not subjected to attack like clover, field peas, buckwheat or flax should be grown, if at all practicable, on sodland the first year at least.

When sodland is intended for corn the following year it should be plowed in July after the hay crop is removed and deeply cultivated throughout the remainder of the summer. Early plowing and summer fallowing with occasional deep disking to keep down weeds and to kill the newly transformed pupae will probably succeed best in controlling wireworms.

There is no summary method of ridding a farm of wireworms for these insects come and go although if no remedial measures are taken against them they may exist fairly constantly and cause more or less injury every year. This is especially likely to be the case when meadows are allowed to stand in grass for several successive years. Therefore, a three or four-year rotation is of prime importance in controlling and preventing serious injury by wireworms. In fact a rotation system of growing farm crops is the only effective method of keeping wireworms under control on a large acreage.

Measuring a Log

A man sells lumber, and the contract says it is to be measured at stump log measure. Will you tell me the contents of a log the diameter at the top is 26 inches at butt 30 inches. Length of log is 18 feet. How many feet of lumber would the seller have.—A. G., New York.

There are two log rules, the Scribner, which has been accepted by the United States Forestry Service as the most accurate for all sizes of logs and the Doyle scale which is accurate for logs above 25 inches but not as fair a measure for smaller logs.

In either scale the measurement at the small end only is considered and this measure is exclusive of work.

Log 18 feet long—small end 26 inches Scribner Scale—562 board feet.

Log 18 feet long—small end 26 inches Doyle Scale—544 board feet.

Cure for Horse in Heat

Question: I got a horse that is ten years old. She is in good condition. She is in heat all of the time. What can I do for it? Please give me advice if you can.—D. V. P., New York.

WE suggest that you procure one pound of Potassium Nitrate, and give animal, one teaspoonful in feed, once a day. This most likely will overcome the condition.

The Favorite Silo!

Because of its patented improved features and durability the Unadilla Silo outsells any 2 other silos in the east and is used on the finest estates and dairy farms.

The door fasteners form a permanent safety ladder, convenient and secure. Hoops are easily adjusted from it. No more dangerous adjusting from easy slipping ladders.

Its air tight, water tight doors that cannot stick or freeze have the additional advantage of giving continuous opening at the level of the silage! No more back breaking work pitching silage out over your head. You simply push it out.

Attractive Discounts!

We offer liberal discounts for cash and early orders. Our easy payment plan makes it possible for everyone to have a good silo!

Send for our big, interesting catalog and complete information—TODAY!

GRANGERS

TRIPLE PURPOSE GRIT

WILL MAKE YOUR HENS LAY MORE EGGS

WIt is sharp and clean, and absolutely the best substance that can be procured for grinding the chicken's food in the gizzard, and thus aiding digestion, and it is so white that there is no waste, as the chicken finds and gets it all.

NO NEED FOR OYSTER SHELLS

HGRANGERS TRIPLE PURPOSE GRIT is superior as a shell-maker. It produces uniformly hard shells that will not break easily, and does away with any need of oyster-shell, magnesium, or any other such materials fed for shell-making.

BALANCES THE RATION—INSURES DIGESTION

YGRANGERS TRIPLE PURPOSE GRIT has a definite mineral content of Sulphur, Carbohydrates, etc., which gives the proper balance to the food required by both chicks and adult birds to keep them in good health, and enable the chickens to produce the best eggs and more of them.

C. M. LONGNECKER, Box 40, Elizabethtown, Pa.

The Outlook For The Poultryman

(Continued from Page 179)

ing for the seasonal fluctuations, poultry production may become stabilized during the next one or two years at somewhere near the present volume. With no great change in demand, prices should hold close to the levels prevailing during the last three years.

Higher Feed Costs Probable

It will probably be necessary to count upon a higher average of feed costs. The index number of grain prices has risen perceptibly in the last few months and, in view of the conditions that are ahead, it seems quite unlikely that grains will drop soon to the level that prevailed from 1921 down to June, 1924.

To offset higher feed prices, more attention to increased production per hen will be advisable. The hatchet treatment can be given to the non-producers and those with low averages. If laying hens were given a larger amount of high protein feeds, especially animal proteins, average production records would be much better. Better sanitation to reduce disease losses is a better way to keep up poultry profits than to wish for higher prices.

So far as good poultry and eggs are concerned, there is never any overproduction. At present, only about one-fifth of the total supply reaching markets ranks as really first class. If average consumption of poultry products is below what it should be, as most poultrymen are likely to think, the best way to increase it is to furnish the consumer with a palatable article.

Buying on Grade Is Spreading

Progress has been made in improving egg marketing methods at many country points in the last year. Dealers are gradually moving toward more discrimination in buying eggs from the producer. This gives more incentive to strive for quality production when an egg is no longer an egg, regardless of whether stale or fresh, checked or whole, dirty or clean and when adequate premiums are paid for fine, well-fleshed poultry to cover the cost of the extra feed and effort required.

In the final consuming markets, there is always a difference in egg values based on quality. It is least during the spring months when receipts are chiefly of good fresh quality and when differences are mostly in average size and cleanliness. It is greatest when receipts are scanty and more or less mixed with stale, shrunken eggs.

By proper management, the number of undergrade eggs could be greatly reduced. It is estimated that 70 per cent of the deterioration in eggs takes place before they reach town. More care in getting them to the local point of collection clean and fresh is highly desirable. Dirty and stained eggs should be consumed on the farm or sold locally rather than mixed in with first class eggs as they will reduce the value of the whole shipment.

There is a broad field for greater specialization by farmers in the production of table poultry of prime quality. Too much poultry leaves the producer while far from being in finished condition. The result is the large and profitable business of fleshing poultry in connection with the large packing houses.

Larger Returns From Direct Sales

To get the greatest advantage from turning out eggs and poultry of quality, it is desirable to deal direct with the consumer. This minimizes deterioration in shipping, it is possible to cater to in-

dividual tastes to some extent, and a top-notch product gets a price that corresponds instead of being sold along with average and low grade lots.

The fact that distributing costs are higher than they used to be means that direct dealing will bring a greater return than it formerly did for the farmer who builds up such a trade. The average retail price of eggs in the principal cities of the United States in 1923 was 12 cents higher than in 1913. The farm price is only 8.5 cents higher. Retail prices of hens were 13.7 cents higher while farm prices of chickens were only 7 cents higher than in the pre-war year.

The spread between farm and retail prices of eggs has increased from 13.2 cents in 1913 to 16.7 cents in 1923, while in the case of chickens, the apparent increase in the margin is from 9.5 cents in 1913 to 16.1 cents in 1923. The farmer who goes direct to the consumer with his product can get the advantage of these higher retail prices, providing, of course, he makes contract with a reliable party. This factor is all important and requires a great deal of forethought and investigation before a final trade agreement is made. It is an ideal solution of the marketing problem.

There are a number of details that enter into the situation, however, that make it out of the question to get all of the spread. It is a means to reduce it. We must bear in mind that the middle man gives service and the millmen's costs have increased materially in the years since 1913. Dealing direct eliminates some expense, not all. It should be beneficial to both parties, both should profit, but the plan is not a panacea as far as "getting all" is concerned. Furthermore, in our complete city system the direct to consumer idea is hard to conceive as the final solution of our marketing problem. Stores must handle the bulk of the business. Dealing direct with stores has its problems and drawbacks. The so-called "best bet" is to ship a well graded product (size, color, shape and interior quality) in a good sound crate and the market will always be anxious for your eggs.

More Folks Watched the Hens During the Eclipse

I NOTICED in American Agriculturist an article entitled "Did Your Hens Go to Roost?" My son was interested and just as the edge of the sun began to show again went to the hen house and twenty-eight of the thirty hens were on the roost. As this was over 90 per cent, I must say our hens did go to roost. I get over a 60 per cent egg yield from them so shall not make potpies of them just yet.

A neighbor said about one half of his 1000 hens went on the roost during the eclipse which was total two minutes here. By the way if Mr. Ohm was so interested in the radio as to not notice the grotesquely lengthened shadows which preceded the total eclipse, he missed something worth seeing, also the crescent shaped spots of sunlight where the sun shone through the foliage of plants was wonderful.—Mrs. L. W. F.

Editor's Note: Mr. Ohm did not fail to notice the grotesque shadows and the peculiar light. Unfortunately the period of totality in his section of Long Island lasted for only a fraction of a minute. Had he been in the two minute country no doubt the hens would have acted differently. As

it was they reacted quite similar the flock of Mrs. Clark, whose letter follows:

Hens Huddled Under Roost

I too, was interested to know the truth about the hens whether they really went to roost during the eclipse. I have just been reading Whittier's account of the eclipse in early New England days. No doubt hen houses were dark affairs in those days as the poet had a lively imagination. At any rate whatever the origin, the opinion seemed to be general that hens would go to roost.

Standing in front of our hen house was a good place to watch the eclipse. With the door standing open, the sun was in plain view from where the hens were scratching in the litter. As the eclipse advanced I turned several times to see the effect upon the hens. It was bitter cold and as the darkness increased they seemed more and more inactive. When the long looked for two minutes arrived. I stood a moment in solemn adoration at the glorious sight and then turned to look at the hens. They had retreated in a huddle, like a flock of sheep, to the further corner of the hen house under the roost, each peering curiously toward the darkened sun. As the sun came out in all its splendor, the hens returned to their usual activity.

In the dwelling house the dining room having only north windows became much darker than the hen house and a darker room might have had a different effect but hen houses are not usually built facing the north.

—Mrs. G. C. Clarke.

Vigorous Breeders Make Vigorous Chicks; Vigorous Chicks Make Vigorous Layers

I see a great many advertisements in poultry papers and elsewhere about feeding materials that are said to improve the vigor of hens and chicks. Are these firms reliable and will their product improve my hens.—A Subscriber.

INASMUCH as this inquiry was received with no advertisements attached, we could not say which were and which were now reliable advertisements. We will say that advertisements along this line appearing in AMERICAN AGRICULTURIST are reliable and we stand back of them. What these people say is based on years of experimentation.

Not knowing in what condition our inquirer has his hens, we cannot say to what extent a conditioner will aid his flock. It may be that this man's flock is in such excellent condition that no food amendment will be of any material value. In other words his flock may be in such excellent shape that the expenditure of money for a conditioner will not bring back enough additional returns to make the investment worth while. There is no need for a perfectly healthy man to take medicine to build him up.

Few Flocks In Pink Of Condition

We find few average farm flocks that are in such superior condition. In other words the average flock will be benefited by one of these amendments. Of course, it is certainly worth while to do a little experimenting on the side to see whether the flock will do better if some of these materials are used. Such an experiment should not be too brief. It should have every opportunity to prove itself. It may not make itself evident in the present condition of the hens. It may make itself evident in the chicks.

HILLPOT Quality STURDY PURE BRED CHICKS HIGH-EGG-YIELD

Active? You'd Never Think Them Day-Olds

You would be more strongly impressed with the point of this if you could but stand with us and watch them as they kick their way out of their shells. They seem to realize, even before an hour's gone, that they have a high standard to live up to—Hillpot Quality.

Buyers of such chicks find their chick problems vanishing. They experience unhopd-for chick PROFITS.

PIELL BROTHERS, Box A. A., PITTSBURGH, N. J.

BASOM'S S. C. WHITE LEGHORNS. CHICKS 15.00 per hundred.

O. B. Basom
Richfield, Pa.

The poultry business has reached the point now where a fellow has got to be right on his toes. He cannot risk a single hatch of weak chicks. Feeds are too costly, labor is too high and poultry products are bringing too much money to allow any lost motion.

It is an old story of a dog chasing its tail. If you have not got good vigorous breeders, there is every likelihood the chicks will be vigorous. Chicks that are vigorous and healthy will grow rapidly and develop early. If the breeders are of an egg laying strain at all, it means early layers. In other words vitality follows right through from one generation to the next. If we can improve the vitality of our birds and chicks, it certainly is good business to do it.

Yeast Supplies Vitamines In Return

We have received a lot of inquiries during the past month relative to the use of yeast in the poultry ration. We know that this has performed some remarkable things in a experimental and practical way. Just how much good it will do in your flock depends of course upon the condition in which your birds are. It may be that your methods are so well regulated that an amendment of this kind will be of no material benefit. If yours is an average flock, we think it is worth at least a trial.

Yeast contains a substance, one of the vitamins that is not ordinarily found in the average ration. It has been found that when vitamins are withheld from a ration, individuals are not as vigorous and thrifty as they are when they are included in the hens' or chicks' food. For instance if you feed baby chicks nothing but grain, you will notice that they do not develop as quickly as when they have hard boiled eggs or milk added to their ration. When eggs are selling at 60 cents a dozen, it is an expensive proposition to feed hard boiled eggs to baby chicks and inasmuch as yeast contains the same vitamins that is found in hard boiled eggs it will undoubtedly pay us to make the substitution.

Yeast And White Diarrhoea

We have been asked in several inquiries whether yeast will prevent white diarrhoea in baby chicks. If the chick is born with white diarrhoea, in its system, we do not believe yeast or anything else will cure that disease. White diarrhoea is a disease of the digestive organs that is passed on from the mother hen through the egg to the chick and once a chick has white diarrhoea, there is no clearing it up. It is so easy to detect white diarrhoea these days through the aid of the poultry departments at our colleges, that there is no reason for any one buying chicks these days that are infected with it.

It has been found that yeast in the ration will prevent to a remarkable extent, the infection of baby chicks with white diarrhoea. In other words a flock of chicks that are fed yeast in the ration will contract the disease from outside sources less readily than if it were not there.

Get Ahead of the Mites

IN the early spring is the time to get busy with cleaning up the henhouses. Hens that are expected to set especially suffer if mites are about them, and as we generally take the hens from the laying nest at night and transfer them to the

RELIABLE BABY CHICKS

Produced under Supervision of Men Trained by Poultry Department, Ohio State University

R. E. FADER

When the Poultry Department of Ohio State University agreed to train and authorize men as inspectors for the Accrediting of hatcheries which come up to their standard, Mr. R. E. Fader of Norwalk Chick Hatchery immediately put his flock under such supervision. He is hatching and selling nothing but Accredited chicks. Mr. Fader has been in the poultry business 22 years and has an unusual record for success in his line of work. His flocks are carefully bred and the chicks he produces are healthy and strong.

He is offering chicks from eight breeds at a fair price. The public can buy chicks from the Norwalk Chick Hatchery and feel sure that they will get honest and square treatment. Mr. Fader will send a fine illustrated catalog on request, if he is addressed at the

nest where they are to set we take them when the host of mites are on them and busy, and they will take up their residence in the new nest. I have seen hens killed by mites—in fact a neighbor had two killed thus last spring, and one of them died just a few days before the eggs hatched, while the other lived only a few days after hatching. Think of the cruelty of forcing a hen to keep her nest while her life blood is being sucked away, yet hundreds of hens suffer just that every year. Kerosene is a splendid remedy for mites and give the house a good spraying with it early and again just before active setting begins.—RACHEL RAE.

Cod Liver Oil as a Preventative of Leg Weakness

Do you believe that cod liver oil is of any material benefit in the ration of the baby chick?—H. J. O., New York.

It has been proved beyond a doubt that cod liver oil is a decided advantage in the baby chick's ration. The main function of cod liver oil in the ration is that it acts as a preventative of leg weakness which has taken toll of hundreds of thousands of chicks in years past.

The great difficulty many poultrymen face in raising baby chicks successfully usually lies in the fact that when the hatches come off weather conditions are such that the chicks cannot get out of doors onto the ground. We know of one instance in particular where a young poultryman lost the larger portion of one single hatch that numbered in the hundreds, due to the fact that just about the time the chicks were ready for the out of doors, a snow storm closed everything up tight. The chicks were held indoors and it was not many days before they began to go down.

Had we known of the use of cod liver oil at that time the chances are not a chick would have been lost from that flock. Cod liver oil supplies in the ration certain elements that are not ordinarily found in the average chick ration. If you hatch early chicks we believe it will be worth your while to try adding cod liver oil or a similar amendment to your ration.

I want to thank you for your article upon the recent eclipse. Although we take three weekly farm papers, no other paper gave us the information. We were able to appreciate the event much more because of your article.
 —Mrs. E. M. C.

The Trouble Maker—By E. R. Eastman

STILL keeping the gun on Jim, Ball and Bill Mead marched up and held the lantern so that they could look into the milk house. The interior was a sad sight. Milk had been poured all over the floor, the water in the cooling tank was colored with it, and the cans were tipped over and rolled in the general mess. Over it all hung the pungent odor of kerosene. The inside of the house had been so saturated with the oil that it would be days before the milk house could be used again.

Ball stood silently for a time taking in the wreck. It seemed to take the fight all out of him. He put down his gun and said to Jim.

"It's cool out here. Come in the kitchen."

Without waiting to see whether either man followed, he turned and started toward the house. He opened the door, stepped in, and waited for the other two men to follow; closed it, went over to the coat rack behind the door, took down a heavy coat, put it on, sat down, and told Jim to take a chair. The boy refused the invitation, and remained standing.

Ball sat for a time without saying anything. When he finally started to talk, all the belligerency had gone out of his voice. He was just a tired, disappointed old man.

"Jim," he said, "a little spilled milk don't amount to much, but every man has to live with himself, and I'm sorry for what you've been doin' lately; sorry for you."

Taylor, standing stiffly erect, made no reply.

"I used to think," continued the old man, "that you was quite a feller. Your father and me were neighbors, and friends. I'm glad he's gone and don't know about this."

"I, too, am sorry, Mr. Ball, for what has happened, but not for what I have done personally. I have done nothing to be ashamed of."

"That makes it bad," answered the old man, "because in spite of all that's happened, and for the sake of your father who was my friend. I would like to let by-gones be by-gones and give ye another chance, if you was worth it. But if ye ain't sorry, I guess there isn't but one thing to do."

"What's the matter, father?"

Startled, the men turned and saw Dorothy standing in the stair door. Her little bare feet were thrust in bedroom slippers, long braids of hair extended down her back, and a light bathrobe inadequately covered her white nightclothes.

"Better go back to bed!" said her father.

"No," she said. "I want to know what's the matter."

"This feller," spoke up Bill Mead, pointing to Jim, "broke into our milk house, poured tonight's milk all over, and then added to the mess by dumpin' a barrel or two of kerosene around."

"Is that right, father?"

"Yes, daughter. We caught Taylor in the door of the milk house and brought him in here."

The girl stepped into the room where she could see Jim's face more clearly in the lamplight.

"Is that true, Jim?"

Jim turned a white face toward her. "What good would it do for me to deny it," he said, "when both these men claim that I did?"

She stamped her foot.

"Answer my question! Did you do it, or didn't you?"

"I don't concede your right to ask that question," Jim told her clearly, "and refuse to—"

He was interrupted by a little scream from Dorothy.

While he had stood rigidly in one place, a trickle of blood had run down his arm and dropped from his fingers until it

had made a little pool on the kitchen floor.

"You're hurt!" she cried.

"It's nothing," said Jim, and then turning to John Ball, "Whatever you think of me, sir, you know that I will not run away. I think I had better make an end to this unpleasant scene. If you will excuse me, I'll be going."

Then he added: "Speaking of being sorry, the time will come when I will not be the only one who will be sorry for what has happened tonight."

With a formal little bow, Jim turned and went out into the night.

CHAPTER XXII

The parlor of the little country church at North Speedtown was a cheerful place. The October sun shone softly through the colored windows and the refracted colors competed pleasantly with those of the heavy red carpet which covered the

What Happened in the Story Last Week

By a strange coincidence Jim Taylor and Dorothy meet in a little sheltered nook where in their childhood days they played house together. The meeting is embarrassing and Dorothy asks Jim frankly if he lead the strikers who destroyed her father's milk. He refuses to answer. While they are talking Harry Bradley, the county agent, comes to visit with Dorothy. Jim goes on his way. Dorothy and Bradley discuss the milk situation but gradually turn to more tender things. A love scene follows, Bradley asking Dorothy to marry him. She tells him that she will give a definite answer by Christmas time. That evening Jim is warned by telephone that a group of strikers have taken matters into their own hands and contemplate destroying Johnny Ball's milk house and its contents. Jim rides post haste to avoid trouble. On the way he is shot from ambush. His wound is superficial and he overpowers his assailant who turns out to be Shepherd, the local representative of the milk dealers. Jim forces Shepherd to take him to the Ball farm. He arrives just in time to see figures running away from the Ball milk house and he is immediately covered with a shot gun in the hands of John Ball.

floor. In the center of the room, with quilting frames resting on the tops of chairbacks, stood a big quilt ready for the tying, and grouped around the quilt were various members of the Ladies' Aid Society of North Speedtown.

Downstairs in the basement kitchen could be heard the cheerful rattle of dishes and the indistinct hum of conversation as some of the women made preparations for the supper that was to follow the quilting.

Upstairs for a time conversation lagged, while deft fingers drew the worsted thread through the lining, the cotton batten, the pieced quilt, and made the little tie.

Finally, Mrs. Wood, a good-natured retiring little woman, who had been pretty before the heavy work of the farm had touched her, paused a moment to look at her neighbors sitting closely together around the big quilt.

"I must admit," she said, "that sometimes I git a little tired of sendin' all these things away to other countries."

"Well, I declare! Listen to that!" spoke up Ann Jenkins. "And why? Are you forgetting our bounden duty to carry the light to the darkened places? I'm s'prized at you, Miz Wood!"

Mrs. Jenkins was often "s'prized" at folks. In fact, some people were mean enough to call her "S'prize Jenkins". But it was always behind her broad back, of course. It took considerable courage to stand up to Mrs. Jenkins, as her husband long ago learned. She was one of those forceful females to be found in all communities, well described by Bill Mead once, when, after an unsuccessful and unpleasant encounter with her, he had told old John Ball that "that there woman is the one that wears the pants at the Jenkins' place all right."

But Mrs. Wood was not so easily backed off the stage.

"You can be surprised all you want to,

Ann Jenkins," she said, while two little spots of color showed in her faded cheeks. "Just the same, religion begins at home and there's a sight of folks right here in this town that would be glad to get a warm quilt like this."

"That's right," said Mrs. Miller, a prosperous buxom middle-aged woman. "Seems as if we had more poor folks than we used to have."

"Shiftless. Just plain shiftless," stated Mrs. Jenkins. "Wouldn't catch me wastin' my valuable time for sech folks. They're too lazy to work, that's all that ails them."

"What about the heathen? Do they work?" persisted Mrs. Wood. "Anyway, the idea of sending a nice warm quilt to savages in Africa, where it's always hot!"

"Why, Harriet Wood! You ought to be ashamed to talk that way," said Mrs. Jenkins, emphasizing her statement by thumps of her thimble on the quilt frame. "Slurring the work of all the good missionaries, that's what you're doin'."

"Money don't last long in town," said the old lady, "when you have to buy everything. Besides, the Shepherds have a very large family."

"But, Mrs. Simmons," said Mrs. Greene, a pretty young matron who had not spoken before. "Why should we help Shepherd when he has done everything he could to hurt us?"

"What was it the Master said?" answered the old lady, looking gravely at them over the top of her spectacles. "But I say unto you, love your enemies, bless them that curse you, do good to them that hate you, and pray for them which spitefully use you and persecute you. And I thought this society was supposed to be founded on Christian principles," concluded the old lady. "Besides, I was thinking of the poor, sick little girl who never harmed anybody."

There being no obvious comeback to this, the women fell to work again and for a time nothing could be heard but the slight movements of their hands as they worked on the quilt. But the mention of 'Shepherd's name had started their thoughts on the strike. In fact, no group of country people could be long together without talking about this, all-absorbing topic.

"They say that reports from League headquarters show that the dealers are weakening," said one of the women.

"Got to weaken pretty soon," grumbled Ann Jenkins. "We women folks are gettin' about all we want of this buttermakin' business."

There were emphatic nods from all around the quilt.

"I told J. H. Jenkins last night," continued the forcible lady, "when he came lugging in a lot more milk from the barn, that if this strike wasn't over by the beginning of next week, he could just take his old milk down to the station and quit this fool playing around."

"Yes, we've got to win pretty soon," sighed little Mrs. Miller. "We're all of us about beat out."

They looked tired, these farm women, as they discussed this great epoch in their lives. Grey hairs showed early in many of the brown and black heads that bent over their work; and the hands working on top of the quilt, even those of the young matrons, were not the soft white scented hands of my lady's boudoir. They were hands brown, roughened and calloused with hard work cheerfully done, hands not soft to the touch, but tender and sympathetic, as understanding hands as ever ministered to man or caressed a baby.

"Well, we're going to win," energetically stated young Mrs. Greene. "We've got them coming, all right, too. There were a lot of them that didn't have much courage in this neighborhood when we started, but now the only one that is left is John Ball."

"Yah, and my man says Johnny Ball vuddn't be deliverin' hiss milk if he didn't haf de sheriff mit him effry mornin'," broke in Mrs. Schmidt.

"And my husband," said Mrs. Greene, "says that old Johnny Ball ought to be in jail himself."

Mrs. Simmons looked up. She had nothing to say for several minutes.

"Your husband, Lottie," she said mildly to Mrs. Greene, "has been rather active in the strike, hasn't he?"

"Now what did the old lady mean by that?" thought the young woman.

"Well, he hasn't any use for men like Johnny Ball that fights his neighbors all the time she answered aloud. "Says he's a regular old scab."

"Not so fast, my dear, not so fast," said the old lady. "I've known old Johnny Ball for more than forty year' and I never knew anything very bad about him. Obstinate, yes; quick-tempered, yes. But

(Continued on Opposite Page)

there is a lot worse citizens than Johnny Ball. And what he does, he does right out in the open; don't go around covering up his face and dumping other folk's milk."

Mrs. Greene wriggled around uncomfortably in her chair. Now what did she mean by saying *that* and looking right at her? Some of the other women were looking at her, too. Old hens! She had a notion to go home!

Mrs. Tom Reilly relieved the situation. "Did you hear about Mr. Ball trying to get help for threshing yesterday?" she said.

"Yes," growled Ann Jenkins. "The threshers sent word they were coming and then Johnny 'phoned all over the neighborhood, and not a single neighbor would change work with him."

"Yes, he came to our place, too," said Mrs. Wood. "He and Charlie had a long talk. Charlie said afterwards he felt awful sorry to have to refuse the old fellow, but he said: 'I told Johnny that threshing and silo-filling and changing works was one kind of cooperation, and that he couldn't expect not to cooperate in this milk fight and then to get his neighbors to help him out when he needed them.' Charlie said old Johnny 'lowed that might be so, but he hadn't thought of it just that way. Charlie said the old fellow seemed to feel pretty bad, kind of looked old and worn."

"Well, he got the same dose that the blacksmith down at Speedtown got," said Ann. "He went around blowing about this milk strike and finally woke up to find that when the farmers had any horse-shoeing or blacksmithing to do, they went over to the other shop. Farm folks are at last learning to stick together. "Yes," she concluded, "if we don't stick, we'll get stuck."

While the talk about John Ball had been going on, Miss Caroline Hicks, who had been working downstairs, came up and took a vacant seat on one edge of the quilt. Miss Hicks was forty, and she was neither fair nor fat. While life had not entirely passed Caroline, it had gotten a pretty good start. She had not succeeded in getting much out of living her own life, so she compromised by trying to live other people's lives.

Caroline's hair was short, black and stiff, pulled straight back from her brow, and bunched in an uncompromising little knob at the back of her head. Her eyes were a faded blue, face was long and narrow, her lips thin and the corners of her mouth turned down. Caroline saw much to condemn in life. She lost no time in getting into the conversation.

"To my mind," said Caroline, "old Johnny Ball with all of his doings is a sight better than that highfalutin' daughter of hisn."

She lowered her voice to her usual confidential tones.

"I tell you, ladies," she almost whispered, "it is perfectly scandalous the way that girl's carryin' on!"

Down at the other end of the quilt, Mrs. Simmons looked up sharply.

"What do you mean?" she said.

"Well, I mean what I mean," added Caroline in a highly mysterious air, "and I know what I know."

"What do you know?" boomed Ann Jenkins. "Don't start something you can't finish."

"Well, I know that somebody ought to talk to that girl's mother."

Realizing that Caroline would have to tell her story in her own way, the women waited for her to proceed.

"You know that Mrs. Hetty Brown, that

married John Royce's second son, Ralph? 'Well, she told me, and she got the story straight from her cousin, Joyce Thompson, who got it from her husband, and he knew a man who caught Dorothy Ball and that smart looking county agent, Bradley, up near that old deserted farm house one evening during the Speedtown fair."

"You got the story so direct," said Mrs. Simmons sarcastically, "that of course it must be so. But what of it if they were together? What's wrong with young folks riding along country roads together?"

"That's all right," sniffed Caroline. But those young folks were not riding. They were settin' in the car, and the car was standin' still!"

"What do you mean?" said Mrs. Jenkins. "Why don't you talk United States?"

"Well, that farm bureau car stood right in the middle of the road, so that the man who told Joyce Thompson's husband had to drive clear out of the road to get around the car. He recognized the car too, and just as he was going by, it was just getting dark, he saw that Ball girl and the farm bureau man settin' close together!"

"Well, what was the matter with that?" mildly inquired Mrs. Wood.

"Yes," boomed Ann Jenkins. "Can't you let young folks be young folks?"

Poor Caroline looked discouraged.

"Well," she said with a sniff, "all I got to say is that when I was a girl, young folks were not allowed to have such carryings on!"

"That was quite a spell ago, quite a spell ago, Carrie," stated Mrs. Jenkins. "Time enough so you may have forgotten."

Caroline's sallow face flamed red.

"We'll all agree," piped up Mrs. Greene, glad to get the center of attention on somebody else, "that Caroline never carried on that way."

Shoving her spectacles up on her hair, and leaning back from the quilt, Mrs. Simmons said:

"There never was an older generation yet that didn't think the young folks were all going to the dogs. Somehow we always think that different ways are wrong ways. But I am sorry if Dorothy is interested in Bradley. He's a nice enough boy, what I've seen of him, but I always were such a nice couple. I'm sorry they did not make a go of it."

This started Caroline on another attack.

"They say that Jim Taylor's carrying his arm in a sling," she said mysteriously.

"Yes, that's true," confirmed Mrs. Westman, the doctor's wife. "Jim was up to the office and the doctor dressed his arm."

"What was the matter with it?" asked one of the women.

"Doctor didn't tell me," said Mrs. Westman. "Just said it was a nasty wound, though."

"I know what was the matter, all right," piped Caroline.

American Agriculturist Crossword Puzzle

Series 2, Number 1

Copyright American Agriculturist, Inc.

See those two long words (9 letters each) that cross in the middle of this diagram? And at each of the four sides is a word of 7 letters just for good measure! We believe in starting the new series right!

But those two long words (and the others, too) are perfectly familiar to every farm-dweller. If you get them first, you have plenty of clues to other words; but if you get the shorter words first, you can more quickly guess the big fellows. Either way, you will like this puzzle, we know.

WHEN picking a fowl, first scald the bird in hot water at a temperature of about 160 degrees of Fahrenheit. A min

Systematic Research —the Only Solution

THE case of farm electrification was summarized as follows in a report presented at the eighteenth annual meeting of the American Society of Agricultural Engineers, by Mr. R. W. Trullinger, Specialist in Rural Engineering, Office of Experiment Stations of the U. S. Department of Agriculture:

"The convenience, safety, ease of control and general flexibility of electrical power are such great arguments in its favor as to justify the most extreme efforts to extend its use generally to agriculture.

"To do this profitably it must be done intelligently. To do it intelligently all the facts regarding the exact requirements of agricultural processes and practices must be known.

"Since it is obvious that these facts are not generally known with reference to the use of electricity as the source of energy, the only solution is to resort to systematic research and investigation following a rational and intelligently prepared program."

The National Committee on the Relation of Electricity to Agriculture has framed a program along these lines calling for experimental research in farm electrification. This work already is under way in thirteen states, each of which has a committee composed of farmers, farm experts, electrical engineers, agricultural engineers and others.

The Committee on the Relation of Electricity to Agriculture is composed of economists and engineers representing the United States Departments of Agriculture, Commerce and the Interior,

American Farm Bureau Federation, National Grange, American Society of Agricultural Engineers, Farm Lighting Manufacturing Association, and the National Electric Light Association.

Scott's Emulsion

gives the lift that Nature needs, and seldom fails to nourish and tone-up the run-down system. Take Scott's!

Scott & Bowne, Bloomfield, N. J. 24-40

Three One-Piece Dresses for Early Spring

No. 2232 has the deep open front and a washable under-blouse for convenience. It cuts in sizes 16 years, 36, 38, 40, 42 and 44 inches bust measure. Size 36 requires 3½ yards 42 inch material with 1½ yards 36 inch for the vest. Pattern, 12c.

No. 2218 is a slip-on which even the beginner can make. It has short or long sleeves, as the two pictures show. The belt effect is very becoming to the average figure. In serge, bengaline or crepe it would be equally attractive. No. 2218 cuts in sizes 16 years, 36, 38, 40 and 42 inches bust measure. Size 36 requires 3½ yards of 40 inch material with ½ yards contrasting. Price, 12c.

TO ORDER: Write name, address, pattern numbers and sizes clearly, be sure correct amount is enclosed (preferably in stamps, as we are not responsible for loss when coins are sent) and mail to Pattern Department, AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York City.

And—whatever you order, add 10c to it! For that will bring you your special copy of the stunning AMERICAN AGRICULTURIST Fashion Book, full of beautiful Easter dresses, cunning frocks for the youngsters, hats and embroidery stitches, house dresses and party gowns—everything, in fact, the home dressmaker might want. Patterns and catalogues are mailed separately, so if one arrives before the other, do not think that your order was only partly filled.

whom Fate throws together and who stick to each other through thick and thin. From Bret Harte's story, "Tennessee's Partner." (Producers Distributing)

THE GIRL ON THE STAIRS—A young woman, played by Patsy Ruth Miller, addicted to sleep walking, through this curious habit finds herself suspected of a murder committed next door. (Producers Distributing)

GREATER THAN MARRIAGE—A heart-stirring story of a woman fighting for her right to a career and still holding her position as wife. The picture does not prove a career greater than marriage but rather that they are equally great and can go hand in hand. (Vitagraph)

HE WHO GETS SLAPPED—The story of a struggling scientist who, suffering from great wrongs done him, ironically offers himself as clown to a circus, one who will make the people laugh by being slapped—and in this he succeeds. How in protecting a beautiful girl who has come into his circus life, he achieves the doom of his malefactor but himself makes the supreme sacrifice is portrayed with tense and tragic effect. An artistic, stirring and thought-provoking picture with splendid acting by Lon Chaney and others. From the much discussed stage play by Leonid Andreyev. (Metro-Goldwyn)

HER NIGHT OF ROMANCE—Constance Talmadge, as an heiress abroad for her

ute or two at this temperature is sufficient. Then wrap the bird quickly in a burlap sack, leaving only the neck exposed. This permits very thorough steaming.

The feathers are removed by rubbing instead of picking, starting from the neck and working back. The burlap sack is removed as the work proceeds. The sack should not be removed more quickly than the feathers, for the feathers must be steam while being rubbed off. It will not take more than ten minutes to clean a duck or goose in this way, and a chicken can be cleaned in four minutes.—E. WHITTAKER.

Save on Oilcloth

When a table is to be covered with oil cloth, place several layers of newspapers over the table first, folding them over the ends of the table well, then fastening the oil cloth over the papers. The oil cloth will wear much longer than it would without this padding.—Z. I. D.

The Bride's Kitchenware

Other Kitchen Lore For Home-Makers

WITH an increasing sentiment in favor of less elaborate trousseaus there is a deeper interest in the "hope chest" with its white linens and monogrammed towels, sheets and pillowslips. The kitchen, aluminum and linen "shower" are prime favorites and the step is one in the right direction.

Garments that are a part of the costliest trousseau go out of style and it has been very sensibly argued that the man who gives his wife no allowance or money for clothes during the first year of their wedded life, finds it less easy to do so the second.

In purchasing for the kitchen of the new home as much or as little as one wishes is the rule. Aluminum ware knows no change of fashions, neither do frying pans, dustpans or rolling pins.

A Conservative List

A list to suit every fancy would be difficult to complete, but the bride-to-be who has \$40 at her command can secure all that she will actually need in the way of kitchen ware for the new home.

The following is perhaps as satisfactory a list of articles as could be suggested: One four-quart kettle; one two-quart double boiler; one coffee pot; one tea pot; two aluminum basins; two covers; three frying pans, one of iron and two light ones; one iron muffin pan; one rolling pin; two deep pie pans, glass preferred; one glass measuring cup; one large cake pan; one tin flour sifter; one set glass mixing bowls; one bread board; two heavy spoons; six custard cups; one pudding mould; one egg beater; one grater; one electric or gasoline iron, or two ordinary flatirons; one paring knife; one dish pan; one dish drainer; one food chopper; one can opener; one mop pail, floor mop, dustless mop, broom, dustpan and brush.

There are other articles that will be added to the kitchen furnishing as the need arises, the "shower" will give oven glass and earthenware, but even if this list is followed in outfitting the new home, the young housekeeper will find herself spared the embarrassment of "borrowing" or making excuses for an improperly prepared meal due to lack of kitchen utensils.—L. M. Thornton.

An Economy Cake

A SOUTHERN reader, who says that in spite of "good times" economy must still be practiced in her kitchen, sends the following recipe for eggless, milkless, butterless cake. She says that it is a favorite with a large and usually hungry family.

Two cups water
Two cups sugar
One cup raisins
One heaping teaspoon lard
One teaspoon vanilla
One teaspoon cinnamon and nutmeg
One half teaspoon cloves and allspice
Pinch of salt

Boil above ingredients five minutes. Let cool. Add four and a half to five cups flour, one cup nut meats (English walnuts preferred), dissolve one teaspoon soda in hot water and add last. Bake in loaf one hour.

Consider the Molasses Jug

NOT every one realizes that some sweets are better than others. For instance, molasses is a more healthful and nourishing sweet than refined sugar, because it contains considerable amounts of iron and lime which sugar has lost in the process of manufacture. It's a good idea to use molasses occasionally in the meal plans—hot gingerbread, molasses cookies, and brown bread are winter dishes which are good for everyone. Old-fashioned molasses pop-corn balls are a confection that needs a revival. If any household is without a

recipe for this sweet cookery, experts at the state college of agriculture, Ithaca, can furnish some good suggestions for popping corn as well as for making the pop-corn confections.

More Recipes For Oranges

Orange Whip

2 tablespoons granulated gelatine
½ cup cold water
½ cup boiling water
1 cup sugar
1½ cups orange juice
3 to 4 tablespoons lemon juice
1 teaspoon orange rind.

Soften gelatine in cold water and dissolve in boiling water. Add sugar and stir until it dissolves, then add ice water, fruit juices and orange rind. When the jelly begins to congeal whip until it is light and frothy. Then put in a mold that has been dipped in cold water and when firm turn out and serve with whipped cream.

Carrot and Orange Marmalade

6 carrots
3 oranges
1 lemon
Sugar

Wash, peel and dice carrots and cook until tender in as little water as possible. Cut oranges in small pieces and add the juice and grated rind of the lemon. Measure the carrot and fruit and add two-thirds as much sugar. Simmer the mixture until it is clear. Turn into jelly glasses and when it is cold cover with hot paraffin.

Things Worth Knowing

HOW did you have such splendid success with your Boston fern?" I asked a friend, as I admired the lovely plant, with its rich, full and long green plummy leaves. She replied, "Every day I gently shake off the bits of dead leaves and brown trimmings. Just once a week I put in a teaspoon and a half of black tea into a pint of boiling hot water, and steep it and then pour it over and about the roots of the plant. When I got it, it was a pale, little spindling thing, and now see it, and this is all the treatment it has had, except plenty of God's golden sunlight and fresh air.

Floors that are to be carpeted, may be made much warmer, by making a padding of three layers of newspapers, glued together at the corners. They also prevent the room from becoming so dusty.

A splendid discovery was made by a clever woman, who found that by putting a thin layer of cheese cloth over a hot air register, and tacking it down, the work of dusting was greatly lessened. The cheese cloth acted as a coal dust strainer, and prevented many particles of coal dust from coming up from the furnace into the living rooms. She put a piece of cheese cloth over each register, and the 'strainers' were laundered once in two weeks.—Z. L. Dahvice.

To Kill the Bugs

INSECTS are not very troublesome to house plants. If any appear, they can be disposed of if the proper steps are taken immediately. Insects are grouped into two classes: Those which eat parts of the plant, and those which secure their food by sucking out the plant sap. Those which actually eat parts of the plant are known as chewing insects and are best destroyed by picking them off the plant, says *Nature Magazine* of Washington. They may also be destroyed with a spray of arsenate of lead. The arsenate is added to water at the rate of one tablespoonful to one gallon of water. Sucking insects may be destroyed by dipping the plant in oil emulsion or a proprietary tobacco extract. This material may be sprayed on the plants, but the dipping process is more satisfactory.

Service Department

Who Owns Water Flowing Through Your Farm?

I have been a subscriber for years, and if I am within bounds of request, I would ask your advice on the following problem:

There are nine farmers depending upon a stream of water to water their cattle. We have water rights to this stream not by writing, but by time immemorial. It has always flowed through the farms. Some eighteen or twenty years ago, a company built a large dam at the beginning of this stream, and have piped the water to the plant a distance of about six miles. They are using nearly all of the water, leaving a small stream running possibly enough to water our cattle. (They recognized we had water rights.)

Now for the second difficulty. Along this stream there is a feed mill. It has a dam, and the owner has always used part of this water to fill his dam and run the mill. Now during the past six months there has been a cut of the supply of water. The stream has been entirely dry about half of the time. The miller has turned all of the water in to his dam. When he has sufficient water, he starts the mill, then we get an over-flow. That may occur any time of the day or night, or may not occur in three or four days. This difficulty has been very annoying, and would be a very expensive law suit to cope with the problem. Can you give me any advice? What is the best thing to do under the circum-
stances?—C. O., New Jersey.

THE problem involved in your letter has to do with riparian proprietorship, or ownership of land bordering on a stream. We can do nothing more than suggest the extent of riparian rights and then, if your's have been infringed, that you and your neighbors combine and seek injunctive relief through the medium of a local attorney.

Water is the common and equal property of every one through whose land it flows, and the right of each landowner to use and consume it without destroying or unreasonably impairing the rights of others is the same. An owner of land bordering on a running stream has a right to have its water flow naturally, and no one can lawfully divert them without his consent. Each riparian proprietor has an equal right with all the others to have the stream flow in its natural way without substantial reduction in volume or detri-
oration in quality, subject, however, to a proper and reasonable use of its water by upper riparian owners for domestic, agri-
cultural and manufacturing purposes, and he is entitled to use it himself for such purposes, but in doing so must not sub-
stantially injure others.

The Wife's Property Rights

Can you tell me what a wife will re-
ceive from her husband's property at his
death, when his farm was willed to him
by his father, the use of it as long as he
lives, and at the time of his death, it
shall go to his children if he has any; if
not, it shall go back to his brothers and
sisters. He has one child. Will the wife
receive any of the property.—Mrs. C. A. F.,
Pennsylvania.

We regret to say that under the terms
of the will of your husband's father, your
children will receive the property on your
husband's death and no part of it will
come to you. If there are no children, the
land then goes back to your husband's
brothers and sisters.

He Should Pay For the Oats

I sold a neighbor three and a half years
ago oats to the value of \$31.90 and I have
been unable to get him to settle for the
oats. I have sent him the bill about four
times and only once he answered and
then he promised to pay the bill in full
as soon as he got his money for a horse
that he sold. But that was almost two
years ago.

Since then, I wrote him a letter telling
him that I would like to have my money
in ten days, but he did not bother to
answer at all. Now I would like to know
if I could sue him and in case he does
not then settle, can have sheriff levy on
his horses, cows, hogs and farm machin-
ery, as he does not own the farm that he
lives on and as far as I know he does
not own any real estate. Please let me
know how I should handle this case.—C.
D. S., Pennsylvania.

Your neighbor is justly indebted to you
in the sum of \$31.90 plus interest, and if
he refuses to pay you can with safety
bring a suit against him.

Upon securing judgment, execution can
be levied upon his personal property—real
property not being essential. To sue,
however, it will be necessary to employ
an attorney.

Look Out For This Kind Of Dealer

I am writing you asking for some help
from your Service Bureau. A party wrote
me asking for a trial shipment of eggs,
which we sent them January 6, 1925. Not
hearing from them, I wrote them last
Saturday and the same day I received a
letter saying on account of failures to do
business, they could not pay for them now.
I sent them a fine case of strictly fresh
white eggs of large size.

We should have known better than to
send them but the letter seemed like an
honest one and it came at the time that
we were looking for a better market for
our eggs, so we sent them a case. Is
there any way that you could collect it
for us? We would be very grateful for
your services.—H. W. T., New York.

This dealer, who signs himself "Aker"
began business by writing several post-
masters and asking them for the addresses
of farmers who shipped eggs. After he
had received we do not know how many
shipments, he wrote the shippers that as
he expected to go out of business he
would not be able to pay for the eggs.
Some of our subscribers took the matter
up with our Service Bureau and when
we made an investigation we found that
Aker had disappeared leaving no address.
No doubt he will do the same thing again
under a different name.

This case demonstrates again the need
of farmers doing business with only
licensed and bonded commission merchants
and dealers.

May Use Water for Irrigation

In addition to the right of drawing
water for the purposes just mentioned, a
riparian proprietor, if he duly regards the
rights of others, and does not unreasonably
deplete the supply, has also the right to
take water for some uses, the most import-
ant of which is irrigation.

If, however, a landowner uses the water
of a stream in a reasonable and lawful
way without malice or negligence and an
injury results to his neighbor below, the
upper owner is not answerable in damages.

In your case, it seems to us that the
company is not entitled to deplete the
stream; for they are piping the water
away from riparian land, which is unlaw-
ful. We are unable from the facts given
to express our opinion as to the other
proprietor to whom you refer.

A Just Claim For Damages

On the night of December 25, 1924, a—
roadster, slid off the road and bumped
against our mail box, breaking the post
off at the ground and breaking the lid off;
also bending the box and breaking the
one back wheel of the car. The garage
man came up the next morning and put
a new wheel on the car and took it away.
I took the number of the broken car
and also the number of the car the garage
man came in to get the broken car. It
took him about an hour to put the new
wheel on and get started.

I sent the car numbers in to Harris-
burg and they sent me the name of the
man to whom the car license was issued.
The broken car was setting within several
feet of the broken mail box post. The
next morning I asked the garage man
whose car it was or who had had the
bad luck, and he said he did not know,
he was called on the phone and asked
how he would like to haul a car in. He
said he would go and get it. Now the
broken car belonged to the garage man.

I sent the car numbers in to Harris-
burg and they sent me the name of the
man to whom the car license was issued.
The broken car was setting within several

he was called on the phone and asked
how he would like to haul a car in. He
said he would go and get it. Now the
broken car belonged to the garage man.

What I want to know is this: would I
have to be an eye witness or would the
broken car, the broken post and broken
and bent mail box be enough evidence? I

BROWN'S
NEW
BARGAIN BOOK
on Fencing
Wire

The Brown Fence & Wire Co., Cleveland, Ohio.
Gentlemen:

Enclosed find order for fence and barb wire as described. Having tried your fence for the last two years, I think it can not be beat anywhere as to price first; quality second; and last, but not least, prompt shipment and durability of fence. I have neighbors and friends that are of the same opinion as myself. Hurrah for Brown fence!

Yours truly,
JACOB ADAMS,
Port Washington, Ohio.

AMERICAN AGRICULTURIST

Founded 1842

\$1.00 PER YEAR

FEBRUARY 28, 1925

PUBLISHED WEEKLY

Flood Time

Brings This Gorgeous Medallion Pattern Seamless Velvet 9 x 12-Foot Rug!

Hartman Gives You a 27 x 52-Inch Hearth Rug FREE

Just send the coupon with \$1 and Hartman, the Largest Home Furnishing Concern in the World, will send you this wonderful 9x12-foot, full room size, Medallion Pattern, Seamless Velvet Rug—and with it, absolutely FREE, a splendid 27x52-inch Velvet Hearth Rug of similar design. Use both rugs on 30 days' free trial. Then, if not satisfied, send them back and Hartman will refund your \$1 and pay transportation charges both ways. If you keep them, pay only for the large rug, a little every month. Take nearly a year to pay. Nothing to pay for the small rug at any time. Keep it as a gift from Hartman.

Rich Design and Coloring

This splendid 9x12-foot rug is so beautiful in design and coloring, so thick and so soft in texture, and so firm in weave, that in appearance and durability it rivals costly imported rugs. Woven in a most artistic, medallion pattern with rich blending of tan, red, green and blue, giving elegance and dignity to the home. The small rug is of the same superb quality—similar in design. Put both rugs on your floor. Examine their exquisite velvet texture and their splendid weight and wearing quality, and enjoy the gorgeous color effects under all conditions of light—then decide. Only by this actual examination can you know the beauty and durability of these rugs.

Nearly a Year to Pay

Use both rugs on 30 days' free trial. Keep them only if you find them the most satisfactory rugs you have ever had, and the most amazing rug bargain you have ever been offered. You will never feel the cost, for you pay on Hartman's easy credit terms—and only for the large rug—nothing for the small one.

Help Now Or Fight Later

What Kind of a Future is Ahead of You and Your Children?

WE ARE all agreed that civilization must be maintained, that any possibility of its destruction or our reversion to barbarism must be rigorously fought. As we are enjoying the fruits of the labors of the many generations that have preceded us, we must accept the resultant duty of preserving it for succeeding generations.

Upon us rests the responsibility for the course pursued by the United States, not alone in the management of its own affairs but also in its relation towards other nations. To fit ourselves, for our gradually increasing sphere of usefulness which should be like an outward spiral, we must do our full duty towards our families, our communities, our nation, and the world, and in addition, to posterity, for whom we must do what our ancestors have done for us. No man or nation performs his or its full duty to the rest of the world unless it contributes towards the common good all the power and capacity it possesses. Non-use is as great a wrong as misuse.

We Are In a Relay Race

When we but even hastily contemplate the unprecedented development of conditions in this country and its people from the time that the Declaration of Independence was signed in Philadelphia in 1776, we immediately visualize a vast constantly recruited army of unselfish, earnest, and determined patriots that have labored zealously and unremittingly to accomplish it.

It has been like a great relay race. The task has been passed along from generation to generation and now this great heritage has been entrusted to us. We are to defend, preserve and improve it so that it will be unsullied and undisgraced when we deliver it to the next relayers in this age-long struggle to remove humanity further and further away from its original state of savagery, and higher and higher up into the realm of spiritual, artistic, and scientific life.

Drafted For the Moral Leader.

The entire responsibility must not be entrusted to the paid officials of a country or to hired professional reformers.

The real champions of the period will be those whose higher moral sense and due appreciation of their duty prompts them to use their superior natural, mental and moral equipment for the good of all.

These are the men that produce lasting good and do not waste their splendid powers, the inherited strength and capacity of thousands of years in more temporary pleasures of gratification of their animal or old savage tendencies.

There has been great use for great men at all times, but never greater than—when a great nation with a great soul is being drafted to become the moral leader of the world, to champion the cause of justice in its great struggle for the supremacy over force.

Are we ready for the task or are all our

By HENRY MORGENTHAU

Formerly Ambassador to Turkey

great talents so completely enthralled in the futile contest to become the richest and most powerful citizens of the country? Only one can reach that position.

Rockefeller and Carnegie did. And, being men, with great minds, promptly recognized their disappointment and the absence of all thrills of genuine satisfaction. They reversed their methods and devoted their brains and energies to redistribute the wealth they had

For a Better World

SOME weeks ago we asked for suggestions from our people as to what they liked and did not like in the different departments and articles that appear from time to time in *American Agriculturist*. As we get room, we are going to publish some of the better letters on this subject. But one of the outstanding things mentioned in many of the letters was the desire of farm people for more discussion on matters of great general interest including both national and international affairs not necessarily connected with farming. Special mention was made of the articles by Henry Morgenthau, formerly ambassador to Turkey, which have been printed in *American Agriculturist* on international affairs. We have considered it a great opportunity to obtain such articles from the pen of such a great authority, and we are pleased that they have been appreciated by our people.

On February 16th, Temple University of Philadelphia conferred upon Mr. Morgenthau the degree of Doctor of Laws, because of his great services to the cause of international peace and the welfare of mankind. On this page is Mr. Morgenthau's thesis which he delivered upon the occasion of the conferring of the degree. In reading it, you have access to an article which you cannot find excelled in the best magazine printed in America. And more than this, the author leaves you with a suggestion which, if followed, would bring order out of the present European chaos and a better world for all of us.—The Editors.

acquired. Today, the most useful American organizations are not the Standard Oil or the U. S. Steel, but the Rockefeller Foundation and the Carnegie Corporation and Institute.

All the "Dollar a Year" men during the war showed that in an emergency, there are thousands whose patriotism, altruism, and willingness to serve their country is latent in them. Their apparently complete absorption in the game of business had still left them responsive to the call of their nation.

Let us prepare ourselves so that the next world crisis will find us better prepared for a prompt response when the international bugle calls us into action.

Our Wealth Came From National Resources

Up to the outbreak of the Great War, the United States had confined its political interest to the Western Hemisphere and to its own internal development. It did not seriously concern itself with European politics.

It was bulging with wealth created largely from the extravagant, careless, hasty, and unmethodical absorption of its own natural resources. It was exhilarated and almost intox-

icated with the results, and thereby prevented from looking beyond the shores that bounded us on the east and west.

Calmly Watched The Fight

The United States, unaware of what had led to the war, and not realizing what it actually involved, could not arrive at any conclusion as to its responsibilities. Its citizens, influenced largely by their descent and their individual friendships for various European peoples were sharply divided, and held divergent opinions as to the duties of our Government. The vast majority wanted to keep aloof from the struggle and hoped that our government would be selected as peacemaker. They looked upon the contentions of the various powers as a tug-of-war, a great international European struggle that did not concern them.

Only when the contestants were deadlocked on the Western Front, and apparently the dispute had to be settled by long attrition, and when Germany arrogated to herself the right to limit the United States to one passenger ship per week, and had audaciously prescribed the course it would have to follow, the United States emerged from its indifference and buckled on its armor.

But It Soon Drew Us In

There was a prompt and sudden revulsion of feeling and with a splendid unanimity, the country demanded that the President, whom they had three months prior reelected on the slogan, "he kept us out of war", should reverse the national attitude and enter the struggle. We crept out of our isolation, promptly developed an unprecedented patriotic enthusiasm that obliterated all difference of opinion, destroyed all hesitancy as to our duty and aroused in us a knightly feeling and an irresistible desire to help the Allied

Powers in their determined struggle to prevent the domination of the world by the Prussian Junkers.

President Wilson's statements and messages lifted the war to a higher plane from that of a mere row between competing industrial powers. The great Giant of the West which had been looked upon as a confirmed pacifist, astonished the world by its rapid conversion into the greatest, most powerful, most resourceful, and most effective fighting machine of all times.

All Took Part

Almost the entire adult population was drawn into the vortex and became either direct or indirect participants in the preparation for and in the activities of the war. By indirect, I mean, not only those who labored night and day to swell the supplies and ammunition that were required for the army and the wounded, but also those who willingly deprived themselves of the usual comforts and food so as to increase the supply required at the front.

VOL. 115 February 28, 1925 No. 9

Jardine for Secretary of Agriculture

PRESIDENT COOLIDGE has chosen William M. Jardine to be the new member of his cabinet as Secretary of Agriculture. Mr. Jardine succeeds the late Secretary Wallace who died in office.

Secretary Jardine comes well prepared for his great and responsible position. As an experienced rancher, he knows from the actual worker's standpoint the problems of the dairy farmer. He has had training in the Agricultural Department itself so that he knows its problems from the inside; and when he was appointed, he was dean and president of the State Agricultural College at Kansas.

We understand that Mr. Jardine is opposed to the McNary-Haugen Bill and all similar legislation which would lift farmers over the fence of their difficulties by their own bootstraps. In this attitude, he will be highly commended and supported by the rank and file of thinking farmers. We have had enough of political interference in the affairs of agriculture.

We think it is unfortunate that the President evidently did not give consideration to Eastern farming in the appointment of a secretary from the Central West. It is strange that Washington in its administration of the affairs of agriculture seems to forget constantly that there is any farming of importance in this country except in a few states in the Mississippi Valley.

A much more serious criticism, however, is going the rounds to the effect that the appointment of Mr. Jardine was made on the recommendation of another cabinet member, the Secretary of Commerce, Mr. Herbert Hoover, and that Mr. Hoover's policies will now dominate the Department of Agriculture. If this is true, it is most unfortunate and the situation should be closely watched by the farmers of the country. The Department of Agriculture, and every other department of government for that matter, should stand squarely on its own feet and should be directed without interference from men in other departments. The chief object in having a separate Department with a Secretary of Agriculture is to get a man with the knowledge and viewpoint which come from first-hand experience, which will give him the sympathy necessary to execute the duties of his department in the interests of the farmers and of the whole people. This object will be largely offset if the secretary takes his suggestions and orders from another department or another man, whose experience and viewpoint are outside the field of agriculture, no matter how capable that department or man is.

Abolish the Fair Commission

NEITHER the farmer exhibitors, the Republicans nor the Democrats are satisfied with the management of the New York State

Fair. In our opinion, this is not the fault of any individual member of the New York State Fair Commission. It is rather the fault of the system of management. We do not believe that there has been any dishonesty in the Fair management, but we do believe that the whole scheme of management is entirely wrong and that it is high time for the farmers of the State to get rid of the expensive, inefficient and political State Fair Commission. The present plan of paying big salaries to several members of the Fair Commission who devote a small part of their time to the job, is absurd and expensive and it should be ended.

The State Fair is supposed to be a farm fair, representative of the agriculture of the State. The New York State Department of Farms and Markets is charged with the administration of agricultural affairs of the State. Therefore, the place for the administration of the State Fair is in the State Department of Farms and Markets. Then it would be possible to hire one able, efficient Fair superintendent, and make him responsible to the Commissioner of Farms and Markets. To supplement this plan, there might well be an unpaid commission of three or five representative farmers to act in an advisory capacity.

Mrs. Forbush Resigns

IT is with great regret that we announce the resignation of our Household Editor, Mrs. Gabrielle Elliot Forbush. Mrs. Forbush has accepted a position of large responsibility as publicity director with the American Women's Association, an organization of business and professional women.

During the past two years, that Mrs. Forbush has been with us in rebuilding AMERICAN AGRICULTURIST, she has made thousands of friends who have come to look forward to the Household Department each week with keen interest and anticipation. We know that these friends will join with us in wishing her the best of success and happiness in her new work.

Greet Grace Watkins Hockett

WE take pleasure in welcoming to the staff of AMERICAN AGRICULTURIST this week Mrs. Grace Watkins Hockett. Mrs. Hockett is our new Household Editor.

Mrs. Hockett was born and raised in a very rural section of very rural Texas. She graduated from the Texas State College for Women with diplomas from the Business Course and from the Household Arts Course. Later she obtained her degree from the Teachers' College at Columbia University, majoring in Household Arts education.

Mrs. Hockett has had experience as a school teacher with little children in the regular grade work, and as special teacher in English in both school and college. She has taught Home Economics work in high school and for over two years was Home Demonstration Agent in Nassau County, down on Long Island. Her work was so outstanding in Nassau County that she was promoted to Assistant State Leader of Home Demonstration Agents of New York State with headquarters at the New York State College of Agriculture in Ithaca. In her work in Nassau County and at Ithaca, as Miss Grace Watkins, she made thousands of friends on Long Island and throughout New York State. After two years of success at Ithaca, she resigned to marry Mr. Hugh Hockett, and to put into practice the great profession of homemaking at her home at Baiting Hollow, near Riverhead, Long Island.

Because of her splendid education and experience, her knowledge of the farm woman's everyday problems, her ability as a writer, and her pleasing personality, we are greatly pleased to be able to introduce Mrs. Hockett to our readers to carry forward the great work of helping to make

American Agriculturist, February 28, 1925

the farm woman's job a little easier, and the farm home the greatest place on earth.

Motion Picture Censorship

MOST of you can remember when there were no motion pictures. It was not so many years ago when the first "movies" made their appearance, but in those few years they have grown from an ingenious novelty to one of America's largest industries, having an influence on life whose importance no man can estimate.

The most of that influence is for the good, too. Have you seen the "Covered Wagon", "North of 36", "The Old Homestead", "Wanderer of the Wasteland", "Peter Pan", "Abraham Lincoln", "Barbara Fritchie", "Birth of a Nation", "America", "The Ten Commandments", "Grumpy", and "The Hunchback of Notre Dame"? If you have seen any of these, or any of the dozens of other great movies, you will agree that no other power or art in the world can approach the modern motion picture for thrilling entertainment, for real education, and for inspiration for better things.

Unfortunately, however, not all of the movies are good, and a bad movie is worse than an evil book because its audience is likely to be larger and especially because the impression and the suggestion are more real and vivid. Pictures of this kind should be cleaned up, and the sooner the better; but a political machine in the form of a censorship board is not the way to do it.

New York State has a Motion Picture Commission consisting of three people who draw large salaries and maintain a large force for the purpose of censoring motion pictures. Anyone who has gone to more than three movies and seen the kind of pictures that have been "passed by the Board of Censorship" knows that such censorship is more or less of a joke. When you stop to think of it, how can three people censor all of the hundreds of pictures? Do you, for instance, approve of all you have seen? They have all been "passed". Do you want someone to take from you your inalienable right to express your own judgment? That is what censorship does. We might even stand this for a time, if it would give us good pictures, but it does not.

We venture to say that the general run of pictures is much worse than it would be were there no censorship at all. This is for the simple reason that the producers feel they do not have to take any responsibility, that all of it can be passed to the censorship board, and therefore the moral code is crowded to the limit constantly by some producers in an effort to get everything possible by the censorship board and of course a lot does get by. Were the producers made to accept the responsibility for their own pictures, and if they knew that immoral and unclean stuff in their pictures would be very likely to land them in jail, you can be sure that it would not be long before there would be real improvement.

Governor Smith has for years pointed out that the whole idea of censorship is un-American. "Nothing", says the Governor, "is more abhorrent to the American idea of freedom and liberty than government censorship. It is not in keeping with our ideas of freedom of worship, freedom of speech and freedom of the press".

As a matter of fact, public opinion rightly exercised is all the censorship that is needed. If you do not like a picture, have the courage to get up and walk out; and then protest to the local exhibitor and get your friends to protest against other pictures of similar nature.

Better than this, study the lists of pictures that are printed in the columns of good papers and magazines, and then urge your local exhibitor to put on these good ones. And when he does, do not forget to patronize him.

A Tax Program For Farm Meetings

Suggested Topics For Discussion And Action At Grange Meetings

EVERY farmer will agree emphatically with the statement that farm taxes must be reduced. But if they are to come down, it will be largely because farmers make themselves heard on the subject so strongly that the necessity of reducing taxes will be uppermost in every public official's mind. To get this united and organized public sentiment in the quickest and most effective way, local farm meetings should take up the subject, correctly inform themselves as to the facts, and go into action as an organization to get tax relief.

We have said many times, and everyone who has studied the subject knows, that the chief difficulties are local; therefore, local action will be the only effective means for getting relief. We have already suggested in *AMERICAN AGRICULTURIST* how local tax committees should be appointed to work on this problem. In this article, we are going to make some suggestions that we hope will be taken up in every Grange and other farm organizations having local meetings throughout our territory. Two or three meetings might well be devoted to this important subject.

Records From Taxpayers

The first subject for discussion might be "WHY THE TAX SITUATION IS SO SERIOUS". This could be opened by a brief statement on how national, state and local taxes have increased in the last few years. There are several sources for such material. If you cannot get it otherwise, *AMERICAN AGRICULTURIST* will be glad to furnish any Grange lecturer or other person in charge of a farm meeting programs with data and facts that would aid in discussing this subject.

After this general discussion, there could be statements from several local taxpayers, giving concrete examples from their own records showing how their taxes have increased in the last ten, or even in the last five years. This part of the program should be arranged for beforehand so that farmers could be prepared to bring facts and figures from their own tax records.

It will be found that such a discussion on the seriousness of the tax situation, particularly if several people take part in it, and give their own experiences, will make a very interesting part of the meeting.

This would lay the foundation for the next discussion, which might be "WHY TAXES HAVE INCREASED SO RAPIDLY". The lecturer or the leader of the meeting with the help of two or three farmers could with a little help prepare an excellent short discussion on this subject.

Some Taxes Are Necessary

Here are a few thoughts. Some increase in taxes must be expected. Farm people never object to paying a reasonable share for the support of necessary government enterprises. The rapid increase in population in this country and the great increase in travel have brought many problems. There are more public charges, for instance, that have to be taken care of in the insane asylums, alms houses, orphan asylums, etc. A few years ago we did not need state police; now they seem to be necessary to protect farm property and to maintain the law. All of these increased activities and others have meant more taxes. Another big increase in taxes has been due to the increased number of good roads and larger school facilities which are necessary to the growing population.

The great problem is where to stop needed activities and to limit the unnecessary government activities. During the War the people got into the habit of expecting the government to do almost everything, but after all, the real accomplishments must be done by the individual.

Lincoln said: "In all that the people can do individually as well for themselves, government ought not to interfere".

Cannot Eat Pie and Have It Too

If we continue to ask the government to take on more and more activities, we must expect to have increases in taxes. Another reason why taxes have increased so rapidly is that government officials have gotten into the habit of spending public money lavishly.

Now how far do farm people want to go in paying for improvements? We cannot "eat our pie and have it too". If we want paved roads on every cross-road, then we must pay taxes. If we want this and want that in the way of increasing government activities, let us pay for them cheerfully and stop talking about taxes.

If we do not want so many things, let us determine in our discussions where to draw the line, and then let us follow these discussions by organized action that will force our

Our Tax Program

- I. The abolition of a direct State tax on property.
- II. No further reduction of income taxes until government expenses are reduced.
- III. Discontinuance of the issuing of tax exempt securities.
- IV. A carefully prepared detailed budget for every government unit from the nation to the county.
- V. Full publicity and information to taxpayers showing the exact purposes, with amounts, for which taxes are spent.
- VI. We are also in favor of:
 1. Larger taxation of personal property.
 2. Gasoline sales tax, and
 3. Taxing billboards along sides of State highways.

public officials to give us what we want and no more.

The third general topic for discussion could be "WHAT CAN BE DONE TO REDUCE TAXES?" This one topic is good for at least two or three meetings. In the center of this page is the *AMERICAN AGRICULTURIST* tax reduction program. This has been endorsed by the Grange, the Farm Bureau, and the New York State Conference Board of Farm Organizations. At least one or two, or three of the items of the program are likely to be passed by the New York State legislature this year.

But none of these that will be passed will touch the local tax problem. We think the best way to handle this is for your local Grange or other farm meeting to appoint a tax committee. This committee could well work in cooperation with the Farm Bureau or with other local farm organizations. It could make a study of the tax situation and report its findings to coming meetings of your organization. It will be easy for the committee to get figures together showing the cost of your school district, your town and county governments. It can find out what your roads, your schools, your public buildings, and your official salaries are costing you. It could interview the village, town and county officials. Maybe some of these officials would be glad to come to your meeting and talk on the tax situation, giving you the facts. When you once have these facts, then you will be in a position to urge reforms like cutting out the local collector and paying the taxes direct to the county treasurer, the publication of budgets, and of tax statements with your tax bills.

Action Needed

And then after the committee had brought you

the facts on the tax situation, you would be ready for the last subject, "CONCRETE ACTION, OR WHAT CAN BE DONE TO HELP REDUCE TAXES". Too many times we hold these discussions and do a lot of talking, and then end it right there. There is considerable criticism going the rounds at present that farm organizations pass resolutions but no one ever hears anything about these resolutions and they do not result in final action.

At your very first meeting on the tax situation, there are certain recommendations upon which everyone can agree that need to be done to reduce taxation. For instance, what about the gasoline sales tax? Do your Assemblymen and your Senators and the leaders in the Legislature know how you feel about this bill? Do they know how you feel on the whole tax situation? That is, have you expressed yourself both as individuals and as an organization in writing to these legislative leaders? Do your own county supervisor, and your county board know how you feel? We cannot expect much help, nor can we blame our public officials, if you have not been interested enough to express yourself in writing to them.

Where You Can Get Help

If you are interested in doing something locally on this tax situation, you will find Master S. L. Strivings of the New York State Grange, at Castile, New York, and the State Lecturer, Raymond Cooper of Oswego, are in sympathy with what you are trying to do and we are sure if you will write them, they will give you valuable suggestions and help.

You will find also that President Enos Lee of the New York State Farm Bureau Federation of Yorktown, New York, and H. C. McKenzie, tax expert of the Farm Bureau Federation, at Walton, New York, will have many valuable suggestions and will help you if you get in touch with them.

If you are a fruit grower, you will find your organization, the New York State Horticultural Society, equally willing to work with you to get information on taxes and to get relief.

More than this, *AMERICAN AGRICULTURIST* has been making a study of this subject for two years. We have nearly 20,000 letters and petitions on hand from farmers on this great subject. We have an immense amount of valuable material, and we will furnish it cheerfully free of charge upon request to any Grange or other farm meeting.

Let us crystallize the unanimous farm sentiment for tax reduction and all work together to bring about the needed relief.

Eastman's Chestnuts

WE certainly received a lot of interesting letters in answer to our contest on "My Ideal Wife", and we can assure our women readers that they want to keep watch for these letters when we print them to know what the men really think about them. However, the farmer in the following story, contributed by one of our friends, evidently did not have a wife of the ideal variety. The story goes something like this:

A farmer's wife was sick, so he had to go for a doctor. The M. D. went home with him, and upon arriving at the house went directly in while the farmer cared for the horses.

When the farmer came in, he said: "Doc, is there anything that I can do to help you?"

The fire was out, there was no firewood in the house, and none cut in the wood-pile.

The doctor replied: "Yes, get your axe and get busy".

The farmer went out and shortly returned with the axe. He handed it to the doctor and said:

"HERE, DOC, YOU HIT 'ER; I JUST CAN'T DO IT!"

fill the drill

—HALF AS OFTEN—

There's twice as much plant food in International Multiple-Strength Fertilizer as there is in standard fertilizer.

"Twice the value in plant food—but not twice the price!" Think of the saving in handling, the saving in hauling and drilling! Each figure in the analysis indicates a unit of plant food. Thus an 8-16-8 Multiple-Strength contains twice as much plant food as a 4-8-4.

All International Fertilizers are made up well in advance of the shipping season. This insures thoroughly cured goods which drill easily.
